Grand Stand Stakes.—Nelly Hill, 1. Ammonia, 2.
Salford Borough Cup.—Typee, 1.

SETTING AT ASTERSALL'S—THURSDAY.

ASCOT STAKES.—4 to 1 to the 84.
ASCOT CUP.—2 to 1 agst Virago (dead); 3 to 1 agst Stockwell (taken to £50); 4 to 1 agst West Australian and Rockwell (1); 10 to 1 agst Mountain Deer (1).
ST LEGER.—3 to 2 agst King Tom (1) 10 to 1 agst Accordist (1); 10 to 1 agst Darvish (off).
EPSOM DERBY, 1855.—1000 to 60 on the field (offered).

RACES TO COME.—The only meeting during the ensuing week is that of "Royal" Ascot, on Tuesday next, and three following days. Her Majesty and Prince Albert, with their august visitors—the King of Portugal and the brother and their daughter. Abundance of first-rate sport will be found, although the "Emperor's Cup' will be an item missed.

CRICKET.—A capital match was played on Monday and Tuesday, at Lord's ground, between an All England and Nottingham eleven, the former scoring 99 runs, England's first innings, 159; second, 117. Nottingham, 118; and 109. G. Parr (Notts) scored 94 in his two innings: in the first, 39; and second, 55; and was presented with a new cricket ball for the day.

ACTAEON.—An interesting match took place on Wednesday afternoon, at the little yachts of the Prince of Wales's Club Eleven yachts (from four to eight tons burthen) started: the course being from Blackwall to the Chapman Head, and, after some capital sport, the contest ended by *Little Mosquito* being first. *Britannia* second, and *Julia* third; but, owing to the allowed time, the *Blue-eyed Maid* obtained the third prize.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

During nearly the whole of the week the market for National Securities has been rather excited. The large quantities of stock lately offered on the part of the public having caused the supply to become very limited, very great difficulty was experienced on Tuesday in the settlement of the Account. To show the extreme scarcity of stock, we may observe that at one time there was a "backwardation" of not less than *one* per cent between the Money and the Account price. This heavy margin, whilst it has materially benefitted lenders, has been productive of serious inconvenience to the *Bears*, whose losses upon the Account have been unusually large. However, no failures worthy of particular notice have taken place. The advance in the price of Consols, since Friday last, has been £1 per cent. This is a most important improvement, considering that we are now engaged in a Continental war; but we are not surprised at it, seeing that large amounts of capital still seek a profitable investment. The fact that the stock of bullion in the Bank of England is steadily on the increase, that our imports keep up surprisingly well, that future arrivals of bullion are likely to be on a large scale, and that the exchanges having become more favourable to this country—have tended to impart general confidence; and we may further observe that a large portion of the mercantile community are of opinion that peace will, before long, be concluded. Under all the circumstances, the present demand for stock is considered unsatisfactory; and the question is in a measure connected with the future progress of the war. Should the Three per Cents, or Money, varied from 93 to 94 down to 92; the Three per Cents Reduced, from 91½ to 92¾; and the New Three-and-a-Quarter per Cents, 92¾ to 93¾. Consols, for the Account, were 92¾ to 93¾; Long Annuities, 1860, 4 1-16; Bank Stock was done at 215; Reduced, 92; New Three-and-a-Quarters, 92¾; India Bonds, 95s.; Exchequer-bills, 1000l., 95s. to 98s.; Ditto, small, 95s. to 98s.; and Exchequer-bonds, 98 to 99. Numerous fluctuations took place in the Consolidated Market during the week. The Three per Cents, or Money, varied from 93 to 94 down to 92; the Three per Cents Reduced, from 91½ to 92¾; and the New Three-and-a-Quarter per Cents, 92¾ to 93. Consols, for the Account, were 92¾ to 93¾; Long Annuities, 1860, 4 1-16; Ditto, 1859, 4 5-16. Exchequer-bills were 95s. to 98s.; small, 95s.; and Exchequer-bonds, 98 to 99. Numerous fluctuations took place in the Consolidated Market during the week. The Three per Cents, or Money, varied from 93 to 94 down to 92; the Three per Cents Reduced, from 91½ to 92¾; and the New Three-and-a-Quarter per Cents, 92¾ to 93¾. Consols, for the Account, were 92¾ to 93¾; Long Annuities, 1860, 4 1-16; Ditto, 1859, 4 5-16. Exchequer-bills were 95s. to 98s.; small, 95s.; and Exchequer-bonds, 98 to 99. The Market was very firm on Thursday. The Three per Cents, to-day, were done at 92¾ to 93¾; India Bonds, 4s.; Exchequer-bills, 2s. to 4s.; and Exchequer-bonds, 98 to 99. Scrip, 1 prem.

There is a very improving market for most Foreign Securities, the value of which has had an upward tendency. Some of the Bonds have advanced rapidly. The following leading prices:—Spanish Three per Cents, 19½; Buenos Ayres Six per Cents, 75; Ecuador Bonds, 8¾; Grenada Deferred, 6¾; Mexican Three per Cents, 24¾; Peruvian Four-and-a-Half per Cents, 79; Portuguese Four per Cents, 40; Russian Five per Cents, 100 to 101; Ditto, Small, 88; Ditto Four-and-a-Half per Cents, 87 to 88; Spanish Three per Cents, 41½; Ditto New Deferred, 29¾; Spanish Four-and-a-Half per Cents, 19¾; Dutch Two-and-a-Half per Cents, 63; Ditto Four per Cents, 83¾; Venezuela, 26.

The transactions in Joint Stock Bank Shares have not been extensive. Australasia have marked 81¾; British North America, 64¾; London and County, 31; Oriental, 43 ex bonus; South Australian, 43; Union of Australia, 71. Miscellaneous Shares have sold as follows:—British American Land, 7¾; Canada Six per Cent Bonds, 109; Crystal Palace, 6¾; Do., New B shares, 5; Peel River Land and Mineral, 5; Peninsula and Oriental Steam, 56¾; Do., New, 26¾; Van Diemen's Land, 18; Berlin Waterworks, 7; East London, 120¾; Grand Junction, 70; Do., New, 17; Kent, 80; Lambeth, 97; Southwark and Vauxhall, 89; Albion Insurance, 90; Atlas, 10¾; Argus, 23; County, 125; European, 19¾; Globe, 127¾; Guardian, 2; Pelican, 45; Phœnix, 185, ex. div. and bonus; Rock, 72; Royal Exchange, 236; Sun Fire, 260; Do., Life, 65; United Kingdom, 45; Hungerford Bridge, 12; Waterloo, 5; Do., Old Annuities, 6¾; Do., New, 3; London Docks, 80.

The shipments of bullion to the Continent have been small, whilst the imports have been on a large scale, chiefly from Mexico. New York Exchange has been in good demand, at a slight premium. Railway Shares, in which some particulars have been given, have ruled as follow:—

Caledonian, 80½; Eastern Counties, 12¾; East Anglian, 3¾; Eastern Counties, 12¾; East Lancashire, 61; Edinburgh and Glasgow, 88; Edinburgh and Northern, 102; Great Northern, 97½; Great Western, 87½; Lancaster and Carlisle, 87; Lancashire and Yorkshire, 85½; Leeds Northern, 19½; London and Blackwall, 8¾; London and Brighton, 105¾; London and North Western, 93½; Ditto, Half-shares, 51¾; London and South-Western, 81½; Manchester, Sheffield and Lincolnshire, 41¾; North British, 31; North Eastern, 74¾; Northern and Eastern, 8¾; Northern of France, 34½; Paris and Lyons, 27¾; Paris and Strasbourg, 31¾; Sambre and Meuse, 9¾; West Flanders Five-and-a-Half per Cent, 9.

Mining Shares have been in very moderate request. On Thursday, Aqua Fria were done at 1½ to 1, Carson's Creek, 1; Cobre Copper, 45; Mexican and South American, 6¾; Port Phillip, 2¾; Rymney Iron, New, 9¾.

Friday Evening.

The amount of business doing in the Consol-market has been comparatively small. Prices have fluctuated to some extent—the Three per Cents, ex dividend, having been done at 91½ ¾ ¼ to 92 and 91¾. The Three per Cents Reduced are 92 to 92¾. There had been very little inquiry for Foreign Bonds or Railway Shares.

THE MARKETS.

CORN EXCHANGE, Friday.—A very limited quantity of English wheat was received fresh into market on Monday morning, and the demand for it ruled steady, while more would have commanded higher terms. Of foreign wheat 11,000 quarters arrived, and of this quantity 10,000 quarters of wheat have exceeded 12,000 quarters. The sale for all kinds was inactive; but we have no change to notice in the quotations. Floating cargoes were unaltered. Barley was in fair average supply, and very moderate, at barely stationary prices. There was scarcely any inquiry for malt, yet the quotations were not lowered. We had a more limited supply of oats, owing to the crops across the country, and prices had a firmer and tendency. Beans, peas, and flour were a shade sale, on former terms.

English.—Wheat, 1 mes and Kent, red, 72s. to 84s.; ditto, white 72 to 88s. Norfolk and Suffolk, red, 74s to 84s.; ditto, white, 74 to 87s; 48s. to 50s. grind by Barley, 34s to 36s.; malting ditto, 34s to 40s. malting, 44s to 46s. Lincoln and Norfolk malt, 67s to 70s. Harrow beans, 42s to 43s.; Kingston and Ware, 40s to 43s.; Chevalier, 42 to 44s.; Yorkshire and Lincolnshire feed oats, 20s to 23s.; potato ditto, 23s to 25s.; Youghal and Cork, black, 24s to 26s.; ditto, white, 26s to 28s.; Sligo, Limerick, and Londonderry, old, 24s. to 25s.; grey peas, 44s to 46s.; maple, 47s to 48s.; white, 46s to 47s; harlers 47s. to 50s. per quarter. Town-made flour, 65s. to 70s.; country marks, 56s to 58s. per 280 lb.

ARRIVALS, English wheat, 760; barley, 110; malt, 2940; oats, 29; flour, 2930. Irish: oats 220. Foreign: wheat, 82,260; barley, 6400; oats, 2720; flour, 11,840.

Bread.—The prices of wheaten bread in the metropolis a from 10d. to 11d.; household ditto, 8d. to 9d. per 4lb. loaf.

Fresh Meat.—Our market to-day commands a steady sale, at full prices. In other kinds, only a few changes have taken place. Generally speaking, the trade is dull.

Imported Meat.—Supplies in raw search this week have been but moderate. In the general quotations, however, no material change has taken place. The demand is heavy, at full prices.

Newgate and Leadenhall (Friday).—The general demand ruled steady, as follows:—

	s.	d.	s.	d.
Beef	3	4	4	0
Mutton	3	6	4	4
Veal	3	8	4	8
Pork	3	6	4	4

Clerkenwell (Friday).—Only a moderate supply of meat is on sale in this market, and the general demand has ruled steady, at the following prices:—

	s.	d.	s.	d.
Beef	3	4	4	0
Mutton	3	6	4	4
Veal	3	8	4	8
Pork	3	6	4	4

Smithfield (Friday).—Our market, to day, was very moderately supplied with beasts, the general quality of which was inferior. All breeds came in fair request, at Monday's currency. Prime oxen, of which we have seen very few, sold very steady, at very full prices. Prime old Scots, and shorthorns, were in good demand, at quite last week's quotations. In other breeds we have experienced a dull inquiry for the demand is scarcely so brisk as last week. Prices have ruled from 2s. to 4s. per 8lb. lower. Calves were steady, at full prices. In sheep and lambs, the supply has been small, and the trade has ruled steady, at from 4s. to 6s. per score. In pigs very little was doing. Which ones sold steady, at from 4s. to 6s. per score.

161st: Lieut. [illegible]

162nd: Lieut. [illegible]

163rd: Lieut. [illegible]

164th: Lieut. [illegible]

165th: Lieut. [illegible]

166th: Lieut. [illegible]

167th: Lieut. [illegible]

168th: Lieut. [illegible]

169th: Lieut. [illegible]

170th: Lieut. [illegible]

171st: Ensign W. J. Denny to be Lieutenant; W. O'Malley to be Ensign.

173rd: Lieut. A. Fremlin to be Captain; to be Lieutenants—Ensign C. C. W. Veasy, Ensign J. T. Campbell; to be Ensigns—S. B. Burges.

74th: Lieut. F. Rowe to be Captain; to be Lieutenants—Ensign J. A. Caldwell, Ensign F. G. Bulteel to be Ensign—W. J. L. Milligan.

76th: Lieut. H. H. Lacy to be Captain; to be Lieutenants—Ensign J. Geddes, Ensign H. J. Robinson; to be Ensign; Cadet G. Gascoigne.

77th: Lieut. T. O. Forster to be Captain, to be Lieutenants—Ensign W. J. Carden, Ensign F. Alder; to be Ensign—Cadet G. E. Knight.

78th: Lieut. H. Mackay to be Captain; to be Lieutenants—Ensign F. Percival, Ensign F. C. Turner; to be Ensign—Cadet G. F. Sewell

79th: Lieut. the Hon. J. H. M. Fraser to be Captain; to be Lieutenants—Ensign F. B. N. Crealford, Ensign H. F. Baillehet.

82nd: Lieut. H. Bruce to be Captain to be Lieutenants—Ensign J. White, Ensign J. F. Pilkington.

83rd: Lieut. J. B. Young to be Captain; to be Lieutenants—Ensign W. Hallowes, Ensign R. Lesage.

85th: Lieut. J. H. Burke to be Captain; to be Lieutenants—Ensign A. D. Maule, Ensign N. Greer; to be Ensign—Cadet H. H. Day

89th: Lieut. to be Captain; to be Lieutenants—Ensign W. H. D. R. Welman, Ensign H. W. Fitz; to be Ensign—G. W. Gregory.

Rifle Brigade: To be Lieutenants—Lieut. the Hon. W. D. M. Best, Lieut. C. V. Oxenden; to be Lieutenants—Second Lieut. T. H. Brunston, Second Lieut. G. T. Boscawen, Second Lieut. the Hon G. B. Leyer, Second Lieut. R. Gore.

ADMIRALTY, JUNE 2.

The following promotions, dated the 26th May, have been made this day, taken place consequent on the decease of Vice-Admiral of the White Hyde Parker, K.C.B.:—Vice-Admiral of the Blue Sir W. H. Dillon, Knight, K.C.H., to be Vice-Admiral of the White. Rear-Admiral of the Blue Reserve Lieut. R. W. Hunt, to be a Vice-Admiral on the Reserve List. Rear-Admiral of the White, Richard Coxon, C.B.; to be Vice-Admiral of the Blue. Rear-Admiral of the White, Peter Rainier, C.B., Junior Lord of the Admiralty, to be Rear-Admiral of the Blue. H. Plumridge [illegible] to be Rear-Admiral of the White. Captain [illegible] Segmour to be Rear-Admiral of the Blue.

SCOTCH SEQUESTRATIONS.

J. LAMERTON and J. GALSWORTHY, Edinburgh, [illegible]. T. POTTS, Hawes, near Brighton, ex. penter and builder. MARY [illegible], Edinburgh, Scotland-hill, Liverpool victualler. H. SIMMONS, Northcote-street, Commercial-road, High-street, Shoreditch and Hackney-road, boot and shoemaker. R. WEST, Fleet-street, and St. James's-walk, Clerkenwell, [illegible] and [illegible]. E. BIALLIS, Bedford place, Commercial-road [illegible]. [illegible] [illegible] [illegible]

FRONT OF THE NEW GRAND CENTRAL RAILWAY STATION, AT BIRMINGHAM.

pilaster being flanked by piers of rusticated masonry. This story is built entirely of Derbyshire stone. Above the arcade runs a boldly-moulded plain cornice, above which, corresponding with the arcade, are ten handsome windows with pedimented heads, and at the foot of each is an elegant balcony. The first floor is divided from the second by a string course, above which is another line of windows, with square heads and cornices. Above this is another string-course and a range of smaller and less ornamented square-headed windows, placed immediately under the principal cornice, which is remarkable for its breadth of treatment combined with fulness of detail. The whole front is surmounted by a handsome balustrade, broken at convenient distances by the introduction of pedestals, between which the chimneys are placed, with due regard for regularity of line; and as these projections are finished with cornices and caps, they add to, rather than detract from, the effect of the building. The edifice, with the exception of the lower story, is constructed of white brick; the window-frames, mouldings, cornices, and the rusticated quoins on the edges of the walls being formed in Portland cement. The wings are only three stories high, and are, of course, less ornamented than the centre—the windows being all square-headed, and the cornices plainer; but the mouldings and string-courses are carried on so as to preserve uniformity, and the upper string-course of the centre runs into the principal cornice of the wings. The Hotel, which is entered by a fine stone porch, comprises the whole of the left wing, the centre (excepting the ground-floor), and the third story of the right wing. The remainder of the edifice is devoted to railway purposes exclusively. The portion of the building fronting the Station is 504 feet long and 92 feet high.

On Saturday last the new Hotel (the Queen's) was the scene of a well-merited recognition of eminent services; when Mr. E. Watkin was presented with a handsome candelabrum and a silver teapot and stand, by his brother officers of the London and North-Western Railway Company, on the occasion of his leaving that line to take the management of the Manchester, Sheffield, and Lincolnshire Railway. An elegant cold collation was provided by Mr. Scott, the manager of the establishment. Captain Huish presided; and amongst the gentlemen present were the Marquis of Chandos (the chairman), Mr. Benson (the deputy chairman), Mr. Glyn and Mr. Thomas Smith (directors), and Mr. C. E. Stewart (the secretary), of the London and North-Western Company; Mr Denison, M.P. (the chairman), Mr. Packe the (deputy chairman), and Mr. Seymour Clarke (the general manager), of the Great Northern Company; Mr. Ellis (the chairman), Mr. Beale (the deputy chairman), and Mr. Carbutt and Mr. Hutchinson, of the Midland; and several other gentlemen. The cloth having been withdrawn, and several toasts given, the Chairman, in an appropriate address, presented the testimonial to Mr. Watkin, which was acknowledged by that gentleman in a suitable reply; after which the company retired.

POYNTON AND WORTH COLLIERS' LIBRARY AND READING-ROOM, (SEE PRECEDING PAGE.)

FESTIVITIES IN ANGLESEA.

HENLLYS, at Beaumaris, the beautiful seat of Captain Hampton Lewis, has recently been the scene of high festivity. On the night of Saturday week a colossal bonfire, 60 feet high and between 50 and 60 in circumference, was ignited on the lawn, and flung its brilliant light across the waters of the Menai, illuminating at the same time the noble mansion now in course of erection by Captain Hampton. The effect was singularly grand, as the monster pyramid of fire flung its lurid flames abroad, with almost noonday brilliancy, bringing into bold relief the dark woods. A large body of the inhabitants of Llanfaes was entertained at dinner by Captain Hampton, in a building specially fitted up for the occasion, when the usual loyal and patriotic toasts were given, and "the Health of the Heir of Baron Hill," who had just attained his majority, was drunk with the greatest enthusiasm. We regret that the excellent owner of Henllys was prevented by sudden and severe illness from participating in any of the festivities which took place to commemorate Mr. Bulkeley's coming of age. Lady Bulkeley very kindly distributed, through Captain Hampton's steward, a large quantity of tea and sugar amongst the poorer parishioners of Llanfaes.

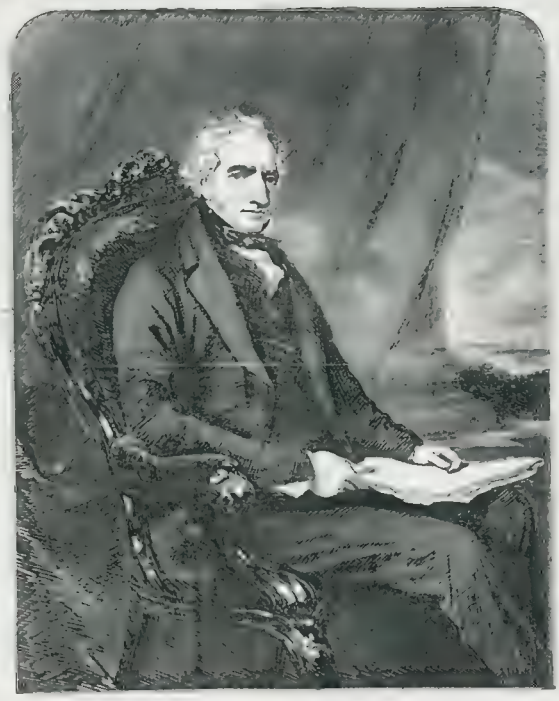
REJOICING AT HENLLYS, BEAUMARIS, TO CELEBRATE THE MAJORITY OF "THE HEIR OF BARON HILL"

THE LATE JAMES MONTGOMERY.

UPON the recent death of "the Christian Poet," it will be recollected that his portrait appeared in our Journal of May 6th. The Engraving was copied from a print executed several years since, and bearing little resemblance to the venerable poet in his later years. We have, therefore, re-engraved his Portrait from the most recent picture, namely, that painted by Mr. R. Smith, 72, Dean-street, Soho, hanging in the South Room of the present Exhibition of the Royal Academy. This has been pronounced an excellent likeness. Our Artist has copied little more than the figure of the poet, omitting the accessories of the picture, which is throughout a graceful composition, and painted with much feeling.

As a pendant, we add the record of a very interesting incident in the poet's closing years,—the Address delivered by him, on his 80th birthday anniversary, Nov. 4th, 1851, on planting a tree in the ground of the Sheffield General Infirmary, of which he had been for many years chairman. The tree being planted, Mr. Montgomery spoke as follows:—

The Sheffield general infirmary and I are *contemporaneous*. In the first week of April, 1792, I became a resident here. In the same week the original prospectus of an hospital, to be established in this part of the county, open to the sick and lame poor of every nation, was issued from the press of Mr. Joseph Gales, with whom I was engaged, whom also I afterwards succeeded, and conducted the local newspaper, under the title of the *Iris*, substituted for the *Sheffield Register*, from 1794 to 1826. The subscriptions in aid of the benevolent project, commencing with a donation from the into Mrs. Fell, of Newhall, came in so freely, that within two years they approached £20,000 when, land having been purchased, the foundation-stone of the building was laid. I was present on that auspicious occasion. The work was prosecutously carried on for three years following, till, on the 4th day of October, 1797, the top stone having previously been brought forth with "Grace! Grace unto it!" the doors were thrown open to all the world—and thenceforward have flowed into it more of the diseased and accidentally afflicted poor than there are at this time inhabitants throughout the whole neighbourhood of Hallamshire. I was a privileged spectator on that joyful occasion, and not being rich enough to contribute liberally out of my small substance, *such as I had I gave*—a hymn—which was accepted and sung within the walls, where, and around which, were assembled the thousands of Sheffield, with more cordial devotion than they were wont to muster on political occasions in those perilous times. I then became an annual subscriber and governor, and as such have been enabled to continue ever since, till at this hour I stand on this consecrated ground; for it was at that time consecrated with the sacrifice of praise and prayer, offered by the late venerable Vicar of Sheffield, the Rev. James Wilkinson, one of the fathers and founders of the charity—on which, from that day, he settled an annuity of ten pounds, to be paid out of certain Church property, purchased by himself and added to the revenues of the incumbency for the benefit of his successors. I stand, therefore, this day between the living and the dead, the sole survivor of all who were originally engaged as co-operators in the erecting and endowing of this house of mercy; for I cannot find on our existing records one name, *but my own*, of those whom I singly represent, and who were mutually and individually concerned as parties in the great work, completed more than fifty-four years ago. That solitary name (at the age of eighty years) must soon, in the course of Providence, cease to be periodically enrolled with the transitive list of subscribers appended to the annual reports of the Sheffield General Infirmary: but the scene and the circumstances of this day assure me, that on this ground, and under yonder roof I may yet be mentioned and remembered with kindness by the remnant of the present generation, and perhaps the unborn of the next. I feel at once honoured and humbled by the demonstrations of good-will towards me by the friends of this noblest of our local institutions.



THE LATE JAMES MONTGOMERY, THE POET.—PAINTED BY R. SMITH.—FROM THE EXHIBITION OF THE ROYAL ACADEMY.

"A WINTER'S MORNING."

BY E. DUNCAN.

WE have here a purely English landscape, treated in a genuine style, from the hand of Mr Duncan, one of the most esteemed members of the Old Water Colour Society, and which forms part of the present year's Exhibition. Though the materials are very simple, the arrangement is somewhat original, and very agreeable. The ground in the neighbourhood of the old farm-house is covered with snow; the white mass being broken across by the rude fence and gate, through which a flock of sheep are advancing towards the spectator, as they sally forth in search of their daily meal. The latter are admirably painted, and give life and warmth to the centre of the picture. The cold, hazy atmosphere in the receding distance is painted with great delicacy and truthfulness of effect.

BRITISH INSTITUTION.—WORKS OF OLD MASTERS.

THE second Exhibition of the season—that of the Works of Ancient Masters—including some by British artists, recently deceased, was opened on Monday last. The collection, as a whole, cannot be described as of superior excellence; the masters represented being chiefly those of the Flemish, and later Italian schools and the works themselves being, with a few exceptions, of but a medium class of merit.

One of the most striking pictures is the "Belisarius," by Salvator Rosa, which hangs over the chimneypiece in the North Room. The figure is boldly treated, and admirable alike for dignity of character and attitude; the colouring, as in all this artist's productions, is severe and cold, and none the worse in effect for having escaped the friendly offices of the cleaner.

But of superior importance is the "Christ on the Mount of Olives," one of the noblest specimens of Correggio's inspired hand, which formerly belonged to the Royal collection at Spain, afterwards found its way to France, and at the Peace was presented to the Duke of Wellington; being exhibited by the present Duke. Observe the sublime intention which makes the chief light proceed from the Saviour, who kneels on the left of the picture; whilst the sleeping Disciples, and the soldiers who approach with Judas are thrown into dark shadow; the crepuscule of the coming dawn being slightly indicated in the background. From the same collection is contributed a very striking picture—"A Witch," by Spagnoletto—conceived in the wildest manner, and executed with a boldness worthy of a follower of Michael Angelo. The Witch is seated in a car, composed of skeleton bones; her fierce look, half that of man, half of woman, and her parchment skin drawn up in wrinkles round her waist; and proudly she rides on, surrounded by her creatures, whose faces exhibit every variety of unhallowed and extravagant expression.

"Jacob with Laban's Flock," also by Spagnoletto, the property of the Earl of Derby, is a bold and effective performance, but wants Scriptural character. Jacob, with one knee on the ground, rests his hand upon one of his sheep, and looks upward, as in earnest appeal to Heaven. The colouring is solemn and full toned.

The "Triumphal Procession," a finished sketch by Rubens, is interesting, as being a copy, with variations, from a beautiful compartment of Andrea Mantegna's celebrated frieze of "The Triumph of Julius Cæsar," now at Hampton Court. It was painted when Rubens was at the Court of Duke Vicenzo Gonzaga, at Mantua (1601-7), and when the original still adorned the ducal palace. The variations introduced show the lively and eminently dramatic fancy of the great Flemish painter, thus instead of the sheep intended for sacrifice, which, in the original, walk beside the elephant, we have a lion and a panther

"A WINTER'S MORNING."—PAINTED BY E. DUNCAN.—FROM THE EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER-COLOURS.

which last appears to growl at the elephant, who turns round to strike him with his trunk. The treatment is bolder than that of the original; the forms rounder and more real than those of the severe antique model followed in it; whilst the rich florid colouring of Rubens' pencil gives an effect to the whole which Mantegna was far from realising. This picture is the property of Mr. Rogers, the poet, by whom it is highly prized.

By Rembrandt we have a capital portrait of a gentleman, holding a musical instrument, painted in the Master's richest style the property of Sir J. Carnegie; and a picture entitled "The Magdalen," the property of the Duke of Hamilton. In the latter is a strange effect of chiaro-oscuro in the brighter manner, with a female reclining at the edge of a piece of water as the foot of a rock, upon which is perched a peacock. In the background is a sporting dog, running; and, beside the disconsolate heroine, a sort of Chinese parasol—truly a strange composition, but enormously brilliant when seen at a proper distance.

Guercino's picture of "Joseph's Garments brought to Jacob," exhibited by the Marquis of Westminster, is a good specimen of that master, in his earlier and bolder style. The "Allegory," by the same artist—belonging to the Duke of Hamilton, represents a female enclosing an infant in a net, whilst an aged man leans forward, as interested in the fate of the latter—the whole probably being suggestive of the trammels of Sin, which Wisdom alone enables us to overcome. It is painted in a firm manner.

The "Diana and Acteon," by Albano, exhibited by Sir C. Burrell, is in a fine state of preservation, and a good sample of this once celebrated artist's style. Upon examination, however, it shows how inferior was his genius, and how adventurous the process of restoring an original has proved. Yet there are to this day, those who, from force of habit, set down Albano as a great master—to be named with Correggio and the Carracci!

A "Virgin and Child," by Murillo, exhibited by Colonel Hugh Baillie, displays to advantage the truly *naturalesque* treatment of the artist, and a charming expression both in mother and child, is the result; but it is not the "Holy Family" of our Ideal. The picture has apparently been damaged, and subjected to the process of restoring and cleaning, which has not improved its original state. The same remark, by the way, we are sorry to add, might be applied to many other pictures in the present collection: such is the impudence of professional picture-dealers—such is the imitation of connoisseurs!

Running the eye along the walls, we observe a spirited "Boar Hunt," by Rubens and Snyders, the property of Lord Derby; and an interesting picture of "Rubens' Wife and Child," by the same, the property of Lord Bute; several very fine Cuyps, amongst which that of "Cattle and Figures on the Banks of a River" (owner, Lord Bute) is the most striking—the light rays of the silvery, not golden, sky, being very clear and brilliant; one or two admirable Ruysdaels—the most remarkable that belonging to the Rev. F. Leicester, representing a cloudy atmosphere, and stagnant water covered with dark vegetation.

Amongst the larger works, what are termed the "Ancient Masters," are several Vandykes, very well of their kind, and which the owners appear to take pride in exhibiting, more on account of their family association with the original's, than for any love of art; and so, also, amongst the more modern painters, we find, as we are sure always to find in this Gallery, a goodly lot of portraits by Reynolds; for the most part selected for exhibition, as we opine, upon similar grounds. These, it would be waste of time to notice individually.

Not so, however, the "Puck," by Reynolds, the property of Mr. Rogers, the most successful Shakspearian realisation. Not so, either, the little "St. John," by the same artist, belonging to Mrs. Newdegate—which is an evidence that the accomplished President of the Royal Academy, though up to the *espièglerie* of a Shakspearian subject, was not equal to a sublime Scriptural one. The figure is that of a smart and somewhat forward boy, with a good head of hair, sitting very much in the still ude manner (with variations) by Michael Angelo, Raphael, and Guido, with his mouth open, as if calling to some one at a distance, but without the slightest attempt at solemnity, or even *grandiose* character, in the expression.

The Queen contributes a picture, by Granet—"The Interior of a Convent"—remarkable for its severe perspective, and as artful arrangement of light and shade. Placed at the end of the Sculpture Room, the effect from a distance is very striking. This picture was painted in 1821, and is well known by the engraving published of it.

Prince Albert pays appropriate compliment to British art, in one of its most gifted professors, recently deceased, by exhibiting one of Martin's chefs-d'œuvre, "The Deluge;" whilst, as a companion piece, Mr. Hope exhibits the same artist's magnificent "Fall of Babylon." Between the two barge Etty's "World Before the Flood;" and at a little distance off is an early and admirable picture by Turner, "Landscape—with Bandit," exhibited by the Royal Academy. Etty, Turner, Martin—three worthy names, all departed from us within a few years. Rising art must work hard to supply their places.

A good supply of landscape and *genre* pictures—by Wouvermans, Mieris, Hobbima, Vandevelde, Jan Steen, Teniers, Ostade, Schalken, Karl du Jardin, Metzu, and others of that favourite class—adorn the walls in all directions; amongst which will be particularly remarked "A Girl with Rabbit," by Gerard Dow—the property of Mr. Hope—a perfect marvel of textural manipulation.

MUSIC.

THE "Prophète" has been reproduced at the ROYAL ITALIAN OPERA, with Madame Viardot in her original part of *Fidès*—a part in which she still has no equal. In other respects, the Opera is cast in the same manner as last season, excepting the character of *Bertha*, which is now performed by Mdlle. Marai, instead of Madame Castellan, who, though in London at present, is not at the Royal Italian Opera—a circumstance somewhat surprising, considering how valuable her services have been, and how great a favourite she has always been of the public. The part of *John of Leyden* continues to be sustained by Tamberlik, to whom Mario resigned it last season. We regret to observe that Mario's delightful voice has become so uncertain. On Tuesday he was again unable to sing in the "Puritani;" and the opera was consequently changed. Grisi gave another of her farewell performances last night (Friday); that evening having been chosen for the accommodation of those who would be prevented by their visit to Sydenham from being present at night.

AT the ROYAL OPERA, DRURY-LANE, the star of the week has been Madame Rudersdorff. On Saturday last she performed the character of *Agatha*, in the "Freischütz;" and, on Tuesday, that of *Leonore*, in "Fidelio." Both appearances were attended with triumphant success; and "Fidelio" was repeated on Thursday. Her impersonation of the interesting heroine of Beethoven's beautiful opera is the most satisfactory we have witnessed since Schroeder Devrient and Malibran. As a piece of acting, it is distinguished for simplicity, truth, and touching effect. The applause of the audience was mingled with tears. As a vocal performance it was marked by that purity, even severity, of taste which characterises the thoroughly-educated German artist. We must add that "Fidelio," as given on these two occasions, has been in its ensemble the most perfectly performance at this theatre. The orchestra has been strengthened and improved, and the choruses and concerted pieces are sung with increased precision and effect. Herr Anschütz, who has succeeded Herr Lindpaintner as conductor, is evidently a musician with the genius of his office.

SINCE the cessation of the French Plays, the ST. JAMES'S THEATRE is kept open for the performance of French Comic Operas. The announcement of this enterprise emanates from the Directors of the Théâtre Lyrique at Paris, who state that the entire company of that theatre are to appear at the St. James's. The Théâtre Lyrique is the third of the Parisian musical theatres: it has been but recently established, and is on a much smaller scale than the Opéra Comique, but it has some clever performers, and enjoys at present a considerable share of public favour.

The performances at the St. James's began on Wednesday. The opera was "Le Bijou Perdu," by Adolphe Adam—a piece produced at the Théâtre Lyrique, in October last, with great success, but we doubt if it will be equally fortunate here. It is certainly immaterial—a thing of no consequence in Paris, but not yet disregarded, we trust, in London. A young nobleman, who has a criminal intrigue with the wife of his friend, and who tries to seduce a decent girl, in humble life, and to get rid of her lover by having him sent off to be a soldier, is scarcely a becoming hero for a gay comic opera; nor are such atrocities to be treated as the trifling escapades of a man of rank and fashion. The whole affair is an exhibition of the most heartless levity. Nor is there any redeeming merit in the music, which is in the usual style of its author—light, trivial, commonplace, and better fitted for the ball-room than the stage. The manner in which this piece was acted and sung has certainly not given us a high idea of the strength of the Théâtre Lyrique company; we shall not prejudge them, however, but shall wait till we can see and hear them in something better. The only one who made any impression was the prima donna, Madame Marie Cabel. She played the part of the little *grisette*, whose escape from the toils of the noble *roué* forms the subject of the piece, and delighted the audience by her piquant looks, her trim toilette, her grace, smartness, and playful coquetry. As a singer she is of the same class with Ugalde, Thillon, and Nau; probably surpassing them all in the clearness and flexibility of her voice, the facility of her execution, and the profusion and brilliancy of her ornaments. When we further hear her in better music, we may be able to discover whether she possesses the higher qualities of a singer—those which are derived from the mind and heart. Her splendid and original displays of vocalisation were vehemently applauded; but the performance, in other respects, was received with indifference. The theatre was fully and fashionably attended; and this speculation, if well conducted, will undoubtedly meet with encouragement.

THE principal CONCERTS of the Week have been those of the two Philharmonic Societies. The Old Society's Concert, on Monday, was marked by only one novel feature; a symphony by Schumann, performed for the first time in this country. Its production proved a failure; it being generally condemned as dry, laboured, uninteresting work. The directors, we presume, brought it forward in compliance with the demand so often made for novelty. Schumann is one of the chief German celebrities of the day; and the directors can scarcely be blamed for giving the English public "a taste of his quality," and showing us what sort of music is at present in vogue in Germany. The rest of the concert was made up of orchestral masterpieces of Beethoven and Mendelssohn, and of vocal pieces of Mozart, Bobeldieu, and Rossini, sung by Madame Castellan and Gardoni. The Queen and Prince Albert honoured the concert with their presence, accompanied by the Prince of Wales and Prince Alfred, and by their Royal guests the King of Portugal and his brother, the Duke of Oporto. The last concert of the Society is on the nineteenth of this month.

The New Society's Concert, on Wednesday, had no novelty of importance, but was interesting from the excellence of most of the pieces. Beethoven's symphony in C minor, and his overture to "Egmont," Mendelssohn's pianoforte concerto in G minor (played by M. Hallé), and his overture to the "Midsummer Night's Dream," and Weber's overture to the "Ruler of the Spirits," were all admirably performed. Madame Rudersdorff sang the scena from Spohr's "Faust," containing the beautiful air, "Ja, ich fühl es" (Yes, I feel it, so sweet), with great energy and power; and Madame Amedei gave Mozart's air "L'Addio," with taste and expression. This was the last concert of the season.

On Wednesday evening Mr. Benson gave his annual concert at the Beethoven Rooms, Queen Anne-street. The vocalists were Miss Dolby, Poole, Rensford, Eyles, and Stabbach; and Messrs. Benson, Francis, Hobbs, Whitehouse, and Phillips, and the instrumentalists, Mr. G. A. Osborne (pianoforte), Mr. Daudo (violin), Mr. Lucas (violoncello), and Mr. Richardson (flute). The concert opened with Mendelssohn's brilliant Trio in D minor, which was exquisitely rendered by Messrs. Osborne, Daudo, and Lucas. Mr. Benson sang, with much taste and feeling, Handel's beautiful song, "Al son ti stringo;" and Miss Dolby elicited vehement applause by the admirable style with which she gave "Flow down, cold rivulet, to the sea." But perhaps the gems of the evening were the English glees and madrigals of Spofforth, Müller, Bishop, and Horsley, of which there were no less than six in the programme. The rooms were crowded by a fashionable audience, and the entertainment was of the most brilliant description.

MRS. ANDERSON'S Annual Concert takes place on Monday morning next. It is always the most attractive concert of the season, both from the rich and tasteful selection of the music, and the host of talent employed in its performance. We are glad to see Mrs. Anderson's own name once more in the programme; as our musical readers are aware that the severe accident she met with four years ago has disabled her, till now, from performing in public.

A STRONG company has been formed by Mr. Beale, for the purpose of giving operatic performances in Manchester, Liverpool, and Dublin, during the months of August and September next. Cravelli, Tamberlik, Marai, Lucchesi, Susini, Tagliafico, Cotti, and Polonini, are engaged; and the performances will be under the direction of Mr. Benedict. "Eidelio" will be given with the same cast as at the Royal Italian Opera. The other operas will be "Lucrezia Borgia," "Lucia di Lammermoor," "Il Barbiere," "Elisir d'Amore," "La Sonnambula," and "Norma."

THE THEATRES.

PRINCESS'.—Commend us to Mr. Harley as an evergreen, whose vitality suffers no abatement, and still maintains its original freshness and colour. In a new piece produced on Monday, under the title of "From Village to Court," by Mr. J. M. Morton, the same peculiarity and brilliancy of manner characterised the actor's assumption of the part of a *Baron von Grosenbach* as in the best of his past days. The old fidgetty courtier, full of a mock dignity, and well practised in the ways of corruption, blind to his own meanness, and alive to his own interest, but blundering in the means, or outwitted by those in his plans, and thus defeated of his end; such was the character which, in Mr. Harley's treatment of it, was a quick and moving portrait. He was ably seconded by Mr. D. Fisher, as a peasant, named *Maximilian Krootz*, who hopelessly loves one *Rose Bertram*, and yet is "as jealous of her as a Barbary-hen." *Rose* has won the gratitude of a *Captain Manheim* (Mr. Cathcart) by attentions to him when dangerously wounded—so dangerously, that he had never been able to see her. Out of this customary ingredient the action, which is very slight, is made to grow, and which consists of certain small perquisites thrown by the espionage of the *Baron* in the way of the *Countess of Lindenberg* (Miss Murray), who wishes to explain to *Manheim* that she would rather leave the Grand Duke for a husband than himself—an explanation which he would have welcomed, as he desires to transfer his affections to *Rose*. The *Baron's* vigilance necessitates the parties to make *Rose* an unconscious signal bearer, by means of a ring and a bracelet, between them; but the telegraph is found not to work well, being interfered with by the jealous *Krootz*. The rehearsals at this theatre are so well cared for, that the performers in this little, but elegantly-written, piece, acted with the precision of a French company—the manager's desire in this respect having been remarkably successful. The impromptu manner of placing plays on the English stage had certainly produced a slovenly style of acting, which left the success of a new piece to chance. By Mr. Kean's mode of preparation, nothing is trusted to accident; and the natural result is the safety, if not the triumph, of every fresh production. The scenery and dresses were, as usual, new, beautiful, and costly; and the drama itself was received with well-merited applause.

ST. JAMES'S.—On Saturday, with M. Regnier's benefit, the French dramatic season closed at this theatre. Under the conduct of M. Lafont, with such talent as that of Madame Allan, Mdlle. Luther, MM. Ferville and Brindeau, this brief term will claim remembrance for the peculiar refinement of the entertainments produced, and the combination of specific excellences in the performers by which they were supported.

LYCEUM.—As we had announced, this theatre re-opened on Monday, under the management of Mr. Charles Mathews, who met with a cordial reception from the audience. The pieces were "Before Breakfast," "Give a Dog an Ill Name," and "Trying it On."

ASTLEY'S.—A grand Whitsuntide equestrian spectacle, entitled "The Cossacks; or, Vive la France," was produced on Monday. It is an adaptation from the French, and forms the medium for complimentary recognition of the union of the Tricolour with the Union Jack. The date of the piece is 1814. Russian aggression is the theme of reprobation throughout, and the dialogue contained some hitting allusions. The scenery is excellent. The Circle, of which Miss Emily Cooke is the heroine, added its usual amusements; and the evening was closed by the production of a new farce, entitled "The Old Horse to be Sold so Pay the Expences, if not Redeemed within Fourteen Days," by Mr. Campbell, and which proved eminently successful.

ADELPHI.—A new farce, by Mr. Mark Lemon, was produced on Wednesday, on the occasion of Madame Celeste's benefit. It is entitled "A Moving Tale." The *moving* of the title is, however, not "re-moving"—the plot turning upon the inconveniences resulting from a change of residence. Both houses, half void of their furniture, furnish the scenes of the play. The family of the Grandisons are put to their shifts, and as much filled with regrets at parting with their late happy home, as with hopes in entering their new one. *Mr. Grandison* (Mr. Keeley) is glad to escape from the confusion, and accepts an invitation to dine with a fellow clerk; but *Mrs. Grandison* (Mrs. Keeley), who is resolved be shall partake his share of the responsibility, sends for him to the scene of bustle, and involves him in an angry domestic altercation, which is carried to an extravagant length. All manner of mishaps, too, have occurred, owing to *Mr. Grandison's* absence; but at length an end is put to the dispute by the entrance of the children full of complaints against their aunt, in whose custody they had been left. All the anger of the parents is now turned on the offending relative, who is thus made the scapegoat of their quarrel; and the husband and wife are reconciled. The rich acting of Mr. and Mrs. Keeley consummates the fortune of this little drama, which is well built up in its details.

OLYMPIC.—A slight change has, this week, taken place in the bill of this theatre. The comic drama of "Hush Money," has been revived, and serves for the opening piece of the evening. Mr. Robson is the hero—and such a hero! *Mr Jasper Touchwood*, exceedingly nervous by constitution, suffering from remorse at having caused the deserted *Sally* (Mrs. A. Wigan), apparently to drown herself, and suffering still more from the fear that he may be suspected of having pushed her into the river, by *Tom Tiller*, the waterman (Mr. Emery) whom he bribes into silence, is just the sort of character which is suited to the eccentric genius of Mr. Robson. Never would *Touchwood* look again on that waterman; but lo! he finds him engaged as extra footman at the house of the intended bride's father, and all his terrors are renewed. He is literally prostrated with their agony, which is exhibited with wonderfully artistic detail; nor less marvellous is the delineation of the reaction, when, somewhat reinforced by a glass or two of sherry, he rises into a fever of manful resistance to consequences, and seems to be more insane than intoxicated. *Sally*, too, reappears, and is at first mistaken for her ghost; great is the nervous delinquent's joy at finding her to be real flesh and blood. Mr. Robson's perfect realization of this character will give another fillip to the fortunes of the house, which was crowded.

WILLIS'S ROOMS.—Dr. J. J. A. Ricard, from Paris, gave a lecture, in French, on "Mesmerology," on Tuesday afternoon, for the purpose of introducing a clairvoyante somnambule to the London public. His lecture, which was divided into two parts, entered into the history of Mesmerism and the proceedings of learned bodies in relation to it. After which the clairvoyante appeared on the dais: a few passes sufficed to produce somnambulism, when, her eyes being bandaged, she played at cards with success, and read writing with facility. Her arms also were thrown into a catalepsic state. The experiments were few, but not sufficiently tested, though apparently satisfactory to the initiated.

CREMORNE GARDENS.—These delightful grounds were opened for the season on Monday. A host of attractions have been added to those of last year. Nearly the whole of the horticultural portion has been re-arranged and relaid to a uniform plan, interspersed with many new statues and vases. The musical arrangements are confided to Mr. Howard, as M. Besozzi; and we had a new ballet, and an entirely new corps of sagacious dogs and monkeys, besides new fireworks, &c. &c. &c. The minor exhibitions include the microscope, and the "Cosmorama," including some effective naval pictures; and the attractions have been immense crowds of Lobby visitors.

NEW ATTEMPT TO GUIDE A PARACHUTE.—On Monday night, in addition to the ordinary programme at Vauxhall Gardens, London, there was announced an ascent in the usual way, and a descent from a balloon in a peculiar manner, by Mr. Coxwell—the machine which enables him to steer in the air. Everything was in readiness for the ascent, but, from the stormy state of the weather, it was considered unadvisable to make the experiment. It was, therefore, postponed until Saturday (this day).

PARIS EXHIBITION.—A preliminary meeting of the silk trade of London was held on Saturday last, in Spital-square, to consider the proper representation of its productions at the Paris Exhibition, when it was resolved to ask the Board of Trade Department of Science and Art to summon a general meeting of the trade for the purpose of organising the requisite measures to represent completely the silk manufactures of the metropolis at the Universal Exhibition of 1855.

GREAT WESTERN HOTEL.—On Tuesday Prince Albert and the Prince of Wales, accompanied by the Duke of Portland, visited the magnificent hotel, which has just been opened, adjoining the Great Western Railway Station, at Paddington. A view of the hotel appeared in the ILLUSTRATED LONDON NEWS No. 598.

THE REGENT'S-PARK ZOOLOGICAL GARDENS.

THERE is certainly no spectacle in London more interesting, and more calculated to enlighten the general public as to the appearance and the manners and customs—so far as they can be observed in captivity, and which is further than most people imagine—than this collection of beasts of all kinds, carnivorous and granivorous, from all quarters of the world; of birds in equal variety: of reptiles of all species; and of fishes and zoophytes. The Directors of these Gardens deserve great credit for the enterprise which they display in obtaining new specimens, while an equal degree of credit is due to our own countrymen in foreign climes, inasmuch as many of them lose no opportunity of sending new specimens of animals to the Gardens. Indeed, ever since [illegible] sometimes even oftener—animals and birds hitherto unknown to the collection make their appearance; and every now and then the birth of a giraffe or a lion, adds to the interest of the Gardens.

We may as well begin our sketch with the lion, the king of the beasts. There are several fine specimens of this animal, in most cases accompanied by the lioness. The Indian lions recently imported have a fuller look—the lion has a scantier mane than the African specimens. There is a glorious old Nubian lion, with a vast forehead, and a mane which extends down his back. The Indian lioness is of corresponding bulk. The collection of tigers and leopards is also very rich. These animals are more restless than the lions; but most of the feline tribe spend the greater part of their time in sleep. During the severe cold of last winter, day-beds, comfortably littered with straw, were provided for all the lions and tigers; and it is pleasant to see the male and the female, lying head and tails, sometimes languidly opening their eyes, and giving a lazy wave of their tails. Most of the animals take their foods to their beds, and eat it there. These creatures, so fierce in their native woods, seem to have lost a great deal of their ferocity; and they do not pounce upon their food with the fury, and devour it with the rapacity, which many people believe; on the contrary, I am inclined to think that they have learned the consciousness of beef, for, when they obtain their ration, they do not fall upon it with voracity, but consider it, turn it over with their huge paws, tear off a morsel and consume it, and then generally take it to their beds and devour it at their leisure. I must not, in this class of animals, pass over the panther, the puma, still more the puma, looking as harmless as puss upon the rug. A late eminent tragedian possessed an animal of this species, which followed him through the house like a dog, at last at his table, and slept in his room.

A propos of dogs, a curious fact is evident, but not without a parallel, occurred in the Gardens. At the feeding-time of two lion cubs, a fine, strong mastiff leaped into the cage. Everyone expected that the cubs would fall upon him; but no, they eyed him with some curiosity, and even suffered him to take his morsel from their paws without eye hitting or roar. Since then they have continued good friends, and tumble about together, in the manner represented in our Engraving. The dog appears to relish his voluntary imprisonment; and when I visited the Gardens to see this strange companionship, the dog was walking up and down, and the lion cubs in their bed were tranquilly regarding him. Of course, the fact of the cubs being born in the menagerie, and kept constantly well fed upon beef, would cause them to have an idea that there was no other food; and that, consequently, the mastiff remains in safety, and is fed along with his companions.

The bears, the hyenas, and the jackals are all restless animals. The former, if two are in one den, which sometimes happens, play with each other, standing on their hind legs, and sometimes simulating a fight, and at others clumsily kissing each other—both with their mouths wide open. The brown bears are those who principally indulge in these recreations. The white are more staid, yet I have seen them too occasionally indulge in the same amusement.

The mild dromedaries—the "ships of the desert"—remind one of Eothen's magnificent account of his desert journey, and Layard's "gay and gentle eye" while the genius, with the small pencil of a boy's book, "the Adventures of Rolando," who, with his companions, chase a "cameleopard," which they discover feeding "under a mimosa tree." There is a young giraffe, born in the Gardens, which, next to the antelope, is the special favourite of the young ladies. The latter, notwithstanding his fits of savagery and his tusk, does not seem to excite such interest as the hippopotamus, which is so popular that a stage is erected for his admirers, where, on holidays, they sit lunching on cold provisions and drinking something out of bottles. Some few years ago, while the usual ignorance of his species, perch close to the monster's nose, and apparently pick up some morsels which had been dropped as he consumed his food, with which he flew away, seemingly satisfied with his exploit. The various specimens of small deer are, as I have already mentioned, favourites with the ladies; but by far the most popular creatures with the general run of the visitors are the monkeys, to whom more gerbroad-nuts, bits of biscuit, and sometimes bits of pie, or cold fragments of the luncheon—than any creatures in the menagerie. I [illegible] natural repugnance to monkeys, apes, and especially gran outangs, which walk about, like gentlemen, with

(*Continued on page 554.*)

Best Class Funeral with Hearse and four, Two Coaches [illegible] pairs, Mutes, Feathers, &c. complete £29 0 0
Pair Horse (separate Car. lage) Funerals complete £5 5 0
ALEXIS BOND, Manager.

GEOLOGY and MINERALOGY.—Elementary lectures on these interesting and universally science, can be had, from Two Guineas to One Hundred, of J. ENNANT, Geologist, 149, Strand London

ORFILA'S POMPEIAN HAIR DYE is now ready to be procured of the sole Proprietors, GRAFFTEY and PATTESON, 20, Soho-square.

RIMMEL'S TOILET VINEGAR, to supersede Eau de Cologne, Hair-dye, Perfumes, and other celebrated [illegible] for the toilet, are now to be had at the new West-end Depôt, 96, Strand, Exhibition.

TINGLETS on COMBS, PLAITS, BRAIDS, BANDS, and BOUNTS, of fine Glossy Hair, post-free on the receipt of 8s. 6d.; all of first quality. At COLLEY'S Human Hair Factory, Hosiery, Hosiery, Warehouse, 28, Hungerford-market West-end, corner of Crosby square. Established 40 years.

FOR the HAIR.—GRAFFTEY and CO.'s BALMA POMPEIANA, after the lapse of sixteen years, retains its superiority as the most safe, and elegant compound for restoring, preserving, and beautifying the Hair, however lank or impaired it may be, it does not cause a disfigurement, or any other cause. Sold by all Perfumers, price 3s. 6d.; or of the proprietors, 20, Red Lion square, Holborn.

FOR LADIES ONLY.—GRAFFTEY and CO.'S DEPILATORY, price 4s. 6d., removes superfluous hair in the face, neck, and arms, quickly, painlessly, and effectually, for the convenience of parties at a distance from their agents, its [illegible] secrecy. Sent, thirty-one postage stamps, by post forward to [illegible] carriage free, by addressing direct to 20, Red Lion square, Holborn.

BLOOD NEEDLE-CASE, containing 100 of Dr. Lancet's Celebrated Vegetable Blood Pills, for Ladies, including Twelve Postage Stamps to DRANE, DRAY, and Co., may have this neat and valuable appendage to her work-table forwarded free by return of post. Observe—Dr. Lancet's Pills (coming to the Moment), London-bridge. Established A.D. 1780.

LOOK to YOUR LEGS.—If they swell, or the veins are enlarged, get one of BALLKY'S ELASTIC STOCKINGS or KNEE CAPS, and see an immediate relief. Prices across measure at 7s. 6d.—W. H. Bailey, 418, Oxford-street, London

LOSS of HAIR.—Mr. PURKESS begs to inform the Nobility and Gentry he may be consulted upon the HAIR from 10 till 5 daily, and will guarantee the restoration and preservation by his treatment.—13, Maddox-street, seven doors from Bond-street.

TO NERVOUS SUFFERERS.—A Retired Clergyman, having been restored to health in a few days, after many years of great nervous debility, is anxious to make known to others the means of cure; and will therefore send (free), on receiving a stamped envelope properly addressed, a COPY of the PRESCRIPTION he used. Direct, the Rev. E. DOUGLASS, 18, Holland-street, Brixton, London.

DEAFNESS.—Patronised by Royalty.—PINE'S ACOUSTIC REFLECTORS are the greatest relief with the least inconvenience ever offered to the public. They can be worn with the hair or bonnet without the aid of a spring. To be obtained of Mr. W. Pine, at his Acoustic Repository, 353, Strand, one door from Wellington-street. Price £2 2s. each.

A NEW DISCOVERY in TEETH.—Mr. HOWARD, Surgeon Dentist, 52, Fitzroy-square, has invented an entirely NEW DESCRIPTION of ARTIFICIAL TEETH, fixed without wires or ligatures. They will be found greatly to the comfort and advantage of those who have suffered from the inconvenience and pain occasioned by the ordinary method. They will be found superior to any teeth ever before used. This method does not require the extraction of roots, or any painful operation, and will support and preserve teeth that are loose, and is guaranteed to restore articulation and mastication. Decayed teeth rendered sound and useful in any [illegible]. 52, Fitzroy-street, At home from 10 till 5.

Now ready, price 2s.,
NEW READING CASES for PROTECTING the ILLUSTRATED LONDON NEWS during perusal. PORTFOLIOS to contain Six Months' Numbers, 4s. each.
CASES for BINDING the Volumes, 2s. 6d. each.
May be obtained at the Office, 198, Strand; and of all Booksellers.

EDUCATION in GERMANY.—MARIENBURG HOUSE SCHOOL, near COLOGNE. Principal, Mr. ALFRED BASKERVILLE. For Prospectuses, with terms, References, and a View of the Establishment, apply to Mr. Mitchell's Royal Library, 33, Old Bond-street.

EDUCATION.—WANTED by a LADY, residing in a pretty village in one of the Midland Counties, TWO LITTLE GIRLS, from six to nine years of age, to EDUCATE with her own daughter, under an experienced Governess. The highest references given and required. Address A. B. C., Mr. Mall's, Highstreet, Bedford.

HANWELL COLLEGE and PREPARATORY SCHOOL
The Fees commence on entrance.
"Hanwell College, conducted by Dr. Emerton, is fully sustaining the high character it has acquired. We find that formerly a set of Hanwell College have been either high wranglers or first-class men of our Universities during the present year; and this is the twentieth instance of success at Sandhurst or Addiscombe we have had to record within a short period."—United Service Gazette, 1853.
Prospectuses may be had on application to the Rev. Dr. Emerton, Hanwell College, Middlesex.

THE SHORTEST of SHORT-HANDS.—An experienced MEMBER of the REPORTING INSTITUTE (not the Phonetic) gives LESSONS, personally or by letter, in MR I 4, Somerset-street, Gosw[illegible]-road. *** INTERLINED SPECIMENS, containing Examples of the use of every necessary Rule, 1s. Post-free, 1s. 2d.

PHOTOGRAPHIC PORTRAITS.—Collodion Process.—CAUTION.—Talbotype. Henderson.—His Honour Vice-Chancellor Wood has this day issued an INJUNCTION to restrain the defendant from making and selling Photographic Portraits by the above process without the license of the Patentee. Artists and others desiring to practise the beauty of the Photographic Art are requested to apply to us. All infringers of the patent rights will be prosecuted without. Price and Bolton, 1, Lincoln's-Inn New-square, May 25, 1854.

INSTITUTE of PHOTOGRAPHY, 179, REGENT-STREET.—Messrs. COOKE and CO. respectfully solicit the attention of Amateurs to the COLLODION prepared only in this Establishment from the recipe of Mr. W. A. Dallmeyer. The Collodion is superior to any other, and will not blister or loop up. Waxed, iodised, and Albumenised Papers of the first quality; also Photographic Chemicals of every kind from their own Laboratory.

PHOTOGRAPHIC NOTICE.—The following American Articles can only be obtained at C. H. FORTNER'S, 4, Leicester-hill—Scovill's Pocket-book for 1854 contains a list of all articles (French, English, and American), used in [illegible] sold by him at the lowest possible rate.
Iodine for Coaters to Charles H. Fottinger, Chief Office, London.
Coated book plates, 6d.; per post, 6d. The undermentioned are in America, for which C. H. F. is Sole Agent—

Iodine.	Sensitive.
Bromine.	Solaro-chrome.
Lime.	Preserver.
Gentle Breeze.	Amber Enamel
Iron Head Rests	Stereoscopic Cases and the
Ditto, Mahogany Baths.	Improvement of fancy
Buff Lathes	ditto in England.
Gilding Machines.	

Every description of article used in glass or paper process.
Coated book plates, 6d.; per post, 6d. The undermentioned are in America, for which C. H. F. is Sole Agent—
N. B.—M. Lafayette-lane, and Crystal Palace, Sydenham.

LITHOGRAPHY.—Messrs. DAY and SON, Lithographers to the Queen, having built suitable and most extensive premises, larger and more appropriate than any other establishment in the world, are now prepared to carry out every species of perfection and dispatch, and more economically, all those higher branches of artistic Lithography for which they have for years been pre-eminent. Colour-printing, as perfected by them, is rendered available, from its simplicity and economy, to which it is peculiarly adapted. For the purpose of illustration, other fac-similes of pictures or book s size, likewise to the production of pattern-books, show-cards, &c. every description of engineering, drawing, plan work, and all kinds of commercial work, executed by the original process of the inventor, with a rapidity and superiority of style hitherto uncombined. Estimates given.—17, Gate-street, Lincoln's-inn-fields

LONDON SUBURBAN COTTAGE and other RESIDENCES, for SALE, with Occupation, the purchase money payable by Yearly Instalments, extending over a period of Ten Years. For descriptive particulars apply to Mr. DAVID BURGES, 12, Gresham-street, Guildhall; and to the following parties, apply to Mr GREEN, Minford-road, Grove-road, Upper Holloway and Mr JAMES GRIFFIN, 4, Sandborough-terrace, opposite the Lea Arms, Brownlow-road, Dalston.

HARMPLEX.—The admirers of the immortal Hand will be pleased to learn that W. M. Kerr, Binns, and Co. have at length succeeded in producing a perfect instrument, which combines the celebrated and curious JUG, proved to have been invented by the late Mr. Harmplex, of Sandborough terrace, by means of which may be obtained of most respectable dealers, or at the Manufactory, late Chamberlain's, Hyde Pottoman Works, Worcester. Price 5s. 6d. each. Cash only. ALEXIS BOND, Manager.

WILLIAMS'S.—Foreman and Pupils, J. and A. JUMP, in the service of the late Mr. Vallamy the rec, etc. periods of 37 and 15 years, and up to his decease, beg to inform the nobility and gentry, that in consequence of the DEATH of the late business from 68, Pall-mall, and its transfer from his family, to 17, Gate-street, Lincoln's-inn-fields (third door from Chancery-lane), Old Bond-street, Piccadilly, about the 24th of June next, from which date all orders, by post or otherwise, will be carefully attended to

EAU-DE-VIE, A PURE PALE BRANDY, possessing all the fine aromatic flavour and delicate properties of the finest Cognac, at half its price; being only 12s. per Imperial gallon. A case containing one dozen bottles, 8s. HENRY HUNTER and CO., Old Vauxhall Distillery, Holborn.

CHOICE OLD PALE COGNAC BRANDY. 20s. per dozen, strongly recommended to consumers, and those to whom it is medicinally prescribed, being well matured, with delicate flavour and (from its great age) free from any heat HODGES and BUTLER, Wine Merchants, &c., 153, Regent-street, London; and 30, King's-road, Brighton. Originally established A.D. 1667.

SCHWEPPE'S SODA, POTASS, MAGNESIA WATERS, and ARMAD ED LEMONADE, continue to be manufactured, as hereto fore, at their Original Works, and are sold in several Establishments in London, Liverpool, Bristol, and Derby. Every bottle is protected by a Label, with the name of "SCHWEPPE" thereon, without which none is genuine. CHARLES and RICHARD SCHWEPPE, 51, WATER-COURT, CITY-ROAD.

THE CHOICEST WINES of FRANCE and GERMANY.

Sparkling Hermitage	All at 42s.	Hock.
Ditto		Sparkling Hock.
St. Peray		Champagne.

Pure Roussillon (one of the finest red wines), 28s.; Minor Sherry, 24s. 30s.; Standard (a Wellington), 36s.; Fine old Brown Sherry, 42s.; Rich, 48s.; Moselle (Diamond Carafe), 36s. 42s.; Red Hock 24s. 30s. 36s.; St. Julien Claret, 30s. 36s.; Milk Punch, 36s.—ROBERT INGLIS, 355, Strand, (two doors west of Somerset House). Carriage free to all rail stations in England. Wines shipped free of duty.

CAUTION.—Messrs. ALLSOPP and SONS find it necessary to caution the Public, and especially buyers of Bass Ale, to the fraudulent practice, against which they have been selling spurious Ales for those of Messrs. Allsopp and Sons' Brewery. Allsopp and Sons have felt compelled, by the extent to which this Shipwards practice has been carried, to proceed, in several cases, to the Courts of Law, and to obtain Injunctions against Dealers, and have ultimately been driven to prosecute criminally, for the commission of this offence.
Messrs. Allsopp and Sons will thank all persons having reason to doubt the genuineness of any article sold on their account, to send them the earliest information, in order that immediate steps may be taken for prosecuting the parties.
Messrs. Allsopp and Sons will be happy to furnish the names of respectable houses, where a supply of their Ales may be depended on as genuine from the Brewery.
BURTON-UPON-TRENT.

DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL. PREPARED FOR MEDICINAL USE IN THE LOFOTEN ISLANDS, NORWAY, BY APPOINTMENT OF THE CHIEF MEDICAL ANALYSIS. THE MOST EFFECTUAL REMEDY FOR CONSUMPTION, BRONCHITIS, ASTHMA, GOUT, RHEUMATISM, RICKETS, AND ALL SKIN DISEASES.
Approved of and recommended by BERZELIUS, LIEBIG, WOHLER, JONATHAN PEREIRA, PORQUIER, and numerous other eminent medical men and scientific chemists in Europe.
Pecularly efficacious in cases with scrofula by the Governments of Belgium and the Netherlands.
It has almost entirely superseded all other kinds in on the Continent, in consequence of its proven superior power and efficacy—effecting a cure much more rapidly.
Contains iodine, phosphate of chalk, volatile acid, and the elements of the bile—in short, all its most active and essential principles—in larger quantities than the pale oils made in England and Newfoundland, deprived mostly of these by their mode of preparation
Sold Wholesale and Retail, in bottles, label as with Dr. de Jongh's stamp and signature, by ANSAR, HARFORD, and CO., 77, Strand, Sole Consignees and Agents for the United Kingdom and British Possessions, and by all respectable Chemists and Vendors of Medicines in the United Kingdom, and at the following prices:—
IMPERIAL MEASURE Half pints, 2s. 6d.; Pints, 4s. 9d.

PIGMY ELEPHANTS, AT THE SURREY ZOOLOGICAL GARDENS.

sticks in their hands. They recall Lord Monboddo's—a Scotch Lord of Session's—theory; on which he wrote a learned work, to prove that all men and all women were born with tails which were unjustly and cruelly snipped at the birth, contending that a tail would have been a very useful appendage, and that as every animal had a tail, and as man was an animal, that he must have had a tail also. The learned Lord quoted a great many instances from ancient authors, of tailed men and women, and was always very angry when any one disputed his theory.

I was amused, the other day, on seeing in one of the minor magazines, an account of the great anteater, in which the author gave a fair enough description of the animal, with his bristly hair, long snout, and spoon-like tongue, lapping up thousands of ants, and then entered into a most vehement philippic on the atrocious cruelty of sacrificing the lives of hundreds of thousands of industrious ants to satisfy the voracity of an ugly beast. Now, the food of the anteater is simply soft-boiled eggs, mashed up in milk, which it laps with its three-inch-long tongue; so that the philanthropist eloquence on industrious ants was quite thrown away.

I have necessarily to omit many interesting animals—birds, and beasts; but it would be unpardonable not to mention the pelicans of the wilderness, with their vast pouches hanging to their bills. The best time for seeing them is when they are being fed. The keeper collects them together into the cage; then proceeds to fling into their pond a goodly quantity of lumps of fish, I think cod; he then releases the captives, who have been poking their pouches through the bars and uttering guttural quacks. The moment the door is opened wings and legs are in active requisition, and such a rush and such a scene of fluttering, splashing, gobbling—one bird trying to take the fish from another, in which, however, it seldom succeeds. When a pelican has secured a fair proportion, he makes a grab at a final morsel, with which he waddles out of the pond, pursued by several others who have not been equally fortunate, but who are too unwieldly long to pursue the chase. I observe that the otter and the seal—the *phoca* of Monkbarns, which knocks down the valiant Hector (who had calculated on conquering it with a stick) with a flap of his powerful tail, an overthrow for which the Antiquary rallies the Highlander all the evening—I repent that I observe the two animals in question to be objects of considerable attention. The otter is only familiar to those who go to spear it—a cruel way of punishing him for eating the choicest part of the salmon. They might net it, and then knock it on the head. The seal is not a native of the English seas; and, therefore, few Englishmen are acquainted with them. The Northern Seas are their element, although in a no higher latitude than the Moray and Benaly Firths I have seen a sand-bank a mile long and half as broad, black with seals. Swimming one day in one of these localities, a seal popped up his round shining head and little ferret-like eyes not a yard from my face. I question whether the phoca or I was the more frightened—he turning round, and partially lifting himself with a plash, and diving, while I swam to the shore, with more rapidity than ever I did in my life. The seal is a dreadful devourer of salmon, as they enter the mouths of rivers they cluster about stake-nets, and eat the salmon alive, quite at their ease. The fishermen attract them to the surface by means of music, for which they have a great predilection, not to say taste. I have seen a whole shoal of black heads convoying a boat, from which resounded the harsh shrieks of the bagpipe, or the notes of a fiddle playing execrably some unknown and unintelligible scrapings. But a brass instrument is that which has most effect in raising them, and the fishermen, by its use, shoot them and spear them by scores.

The Aquavivarium is a new and very interesting addition to the Gardens, containing, as it does, a beautiful collection of our native fishes, fresh water and salt, with shell-fishes, and the zoophyte tribe, which stretch out their long fibres, and then contract them; adhering shell-fish abound, and their ova often sparkle on the green weeds. Along with the more rare fish, the familiar sole and whiting are seen; and there is a small gold-fish-like creature, but longer, and with a very long snout—the name of which I do not know, but which seems something like a diminutive salt-water pike. Here are two large crocodiles, which live on gravel and water in the west tank, in a torpid state, and a smaller one, equally motionless in the East. There, however, are turtles which swim about on the surface or under water, or scramble on stones provided for them, and sleep.

I must pass over the new Aviary, with its beautifully-plumaged birds and its ducks, a species of which look as if it were compo-ed of all the most brilliantly-coloured precious stones—only devoting a few words to that strange creature, the flamingo, which has legs fully a yard in length, and hardly thicker than the stem of a tobacco-pipe. But the strangest peculiarity is that it has knees, while the peculiar formation of the joint makes it kneel backwards—a peculiarity shared in, I should think, by no other bird of the same species—certainly not by the stork—the other bird which I will briefly notice—merely, I suspect, from the sympathy I feel for the "stork upon the house-top," and particularly for Philip Van Artevelde's domestic stork, from whose chattering by night the old housekeeper prognosticates evil to the family. Here are Taylor's nervous lines—

> Our stork he chattered on the roof all night;
> And Roger is the wisest stork in Ghent.

A. B. R.

LION CUBS AND DOG,

IN THE ZOOLOGICAL GARDENS, REGENT'S-PARK.

AMONG the numerous novelties which delighted the twenty thousand visitors at the Zoological Gardens on Whit-Monday, none appeared to interest them more than the Lion Cubs, which we have chosen for our Illustration. Both these animals were born in the menagerie towards the end of 1853, but have been judiciously reserved for exhibition until the present time, when they have acquired sufficient age and strength to endure the situation in which they are placed. The lioness, we understand, was brought up entirely by hand, with the bull-terrier puppy as her foster brother. The lion was suckled by his mother, a lioness of the Nubian race, presented to the Society by his Highness the Viceroy of Egypt, in 1850. The female cub is the offspring of a splendid lioness, from Mozambique, presented to the Society by Lieutenant-General Sir Harry Smith.

The admirable health and full development of these valuable animals reflects great credit on the Society's establishment; and we may now hope that infant Lions will in future form a constant feature in the menagerie.

The extraordinary degree of popularity which this interesting collection has attained has been well indicated by the result of the admissions on the two great holidays of this year. We understand that on Easter Monday and Whit-Monday alone, the number of persons who visited the Gardens amounted to no less than 38,500. The last acquisition to the menagerie is a pair of the Riman dahan, an exceedingly beautiful and very distinct species of leopard, from Assam.

SURREY ZOOLOGICAL GARDENS.

MR. TYLER, the proprietor and manager of this very pleasant place of resort, deserves great credit for the constant addition he is making to his menagerie and aviaries. He now possesses a large and well-selected collection, embracing, in all, the principal attractions of the Zoological collection, in the Regent's-park, although he does not yet possess some of the rarer specimens, and the most difficult to procure, which at present inhabit the Gardens in question. He has lately added, at considerable expense, two calf elephants, which in height reach up to the breast of a man of ordinary stature. They are the youngest elephants ever imported into England. They are natives of Bengal, and were brought over in the *Hoogerd* East Indiaman. They are well worth a visit, not, of course, on their account merely, but on that of the whole collection.

LION CUBS, IN THE GARDENS OF THE ZOOLOGICAL SOCIETY, REGENT'S-PARK.

"MINCEMEAT," THE WINNER OF THE OAKS, 1854.

THE WINNERS OF THE DERBY AND THE OAKS.

In our last Number we gave a portrait of "Andover," the winner in the race for the Derby Stakes, on the 31st ult., and to-day we give the likeness of "Mincemeat," the winner of the Oaks Stakes, on the 2nd inst. The former was bred by W. Edwards, Esq., and is by Sir Middleton and Defence. Andover is a bay horse, standing about 15¾ hands high, with a handsome head, good neck, sloping shoulders, and great length of girth; he has strong powerful quarters, well let down, short, from hock and knee to the ground; good bone; is lengthy and low; a remarkably racing-looking nag; the off hind fetlock joints white. Andover ran third for the Ham Stakes at Goodwood last year; at the same meeting he won the Molecomb Stakes. At Brighton Club Meeting he walked over for a Sweepstakes, and also won a Plate of 100 Sovs. For the present year, Andover is in the Three Year old Triennial Stakes and Stewards' Plate at Stockbridge; in a £50 Sweepstakes at Goodwood; in the Champagne Stakes at Brighton; in the County Plate at York; and the Don Stakes at Doncaster.

"Mincemeat" was bred by Mr. J. Cookson, and is by Sweetmeat and Hylla. The winner of the Oaks is a small and by no means a good-looking filly. During 1853 she ran second for the Molecomb Stakes, at Goodwood, at Newmarket, First October Meeting, ran a dead heat for second place in the Rutland Stakes, and in the Second October Meeting she won the Belford Stakes. Mincemeat has two engagements for 1854, in the Stewards' Plate, at Stockbridge, and in the Great N. and S. of England Biennial Stakes, at York August Meeting.

THE CRYSTAL PALACE, AT CHELTENHAM.

THE public spirit of this "Queen of Watering places" has just succeeded in raising an Exhibition structure which is worthy of rank with the emanations of the great gathering in Hyde-park, in 1851. Soon after this eventful display was projected, an effort was made in Cheltenham to restore the attractions of the summer season, upon which, for two or three years previously, little attention had been bestowed, and it was decided to get up, in 1850, a monster flower show, offering prizes of such a value as would induce the leading horticulturists of the kingdom to exhibit. So satisfactory was the result, that it was thought advisable to remodel the local Floral Society, and it was arranged that, instead of five or six petty exhibitions in the course of a season, three of a superior character should be held, the amount of prizes offered to be fully set forth in the schedule, and each show to be enlivened by the performances of the most efficient musical corps to be engaged in the kingdom. The alteration was found to work most successfully, the prizes ranged from £10 downwards—and the result of the determination to improve the character of the society was that shows, unsurpassed only by those of Chis-

OPENING OF THE CRYSTAL PALACE, IN THE ROYAL OLD WELLS GARDENS, CHELTENHAM.

wick and Regent's-park, were of frequent occurrence. But this was not all. Last year, an International Exhibition was held at Pittville Spa. The prizes offered amounted to nearly £300, and among the exhibitors were some of the leading growers of the Continent.

The scheme for the present noble undertaking was, however, first propounded only in the month of September last, by Dr. Conrtland Shaw, of Cheltenham, who first sketched out the plan of the monster Flower Show of 1853; he it was who proposed the All Nation's Flower Show of last year.

The original proposal of Dr. Shaw was that there should be an exhibition of flowers, of works of art having some connection with horticulture, and of articles the design of which might be taken from the science. The floral portion of the display—from the fact that rare plants ought not to be a longer time out of their conservatories—was to be confined to two days; the other portion, it was proposed, should remain open for a much longer period; and therefore it was suggested that a Crystal Building to contain these articles should be erected. The project was received somewhat coldly at first; but this did not deter some two hundred inhabitants of Cheltenham from coming forward and undertaking to provide a sort of floating capital. A good working executive committee was then formed, and these gentlemen prosecuted their labours most vigorously; and the result of their combined exertions of less than eight months, may now be seen in the grounds of the Royal Old Wells.

The committee found it advisable to form a fourth section for the fine arts; and subsequently, in consequence of so many applications being made for the admission of articles of utility and interest, not coming within the scope of the Exhibition, a fifth department, under the title of the Museum section, was created.

The committee decided upon the grounds of the Royal Wells as the site of the Exhibition, and, having agreed upon the erection of a Crystal Building, advertised for plans and tenders, and accepted those of Mr. George Parsonage, of Cheltenham, who has executed his contract in the most creditable and satisfactory manner. The building is 400 feet in length, and 40 feet in width, with a transept 90 feet by 40 feet, and having a ridge-and-furrow roof, with handsome dome. The principal entrance is in the broad walk, opposite the Pump-room, and the doors are filled with stained and ornamental glass; the national emblems of the rose, shamrock, thistle, and leek, together with the Royal arms, being introduced with pretty effect. The roof is supported by iron columns, which, being hollow, answer the purpose of water conductors; they are painted blue and white. The lower portion of the exterior of the building is painted red and granite. In the centre of the transept is an elegant fountain; and the principal entrance is guarded by a pair of sculptured griffins.

We have only space to add that these sections which more immediately relate to Horticulture, "the arts and sciences connected therewith, and designs taken therefrom," occupy about three-fourths of the Crystal building.

The Fine Arts Section occupies the upper portion of the building, and includes nearly 800 separate productions. Of these, about 160 are oil paintings, 60 are water-colours, the rest being miniatures and photographs.

The Museum Section occupies the Royal Well Music-hall, and is filled by a remarkable collection of curiosities.

The Great Flower Shows in connection with the Exhibition, take place on Tuesday and Wednesday, the 20th and 21st inst. The shows will be open to all nations, and the prizes offered amount to upwards of £300. On these days, the price of admission to the whole of the Exhibition will be 5s.

The building was opened with great ceremony on Thursday week, June 1. The weather was fine, the bells of St. Mary's Church rang merry peals, and flags and streamers floated gaily from many public buildings in the town.

A public breakfast took place beneath a spacious tent, which covered the broad walk facing the Royal Wells Music-hall. About five hundred sat down. The pillars which supported the marquee were tastefully decorated with flowers. The chair was taken by Mr. W. Nash Skillicorne, Chairman of the Executive Committee.

Grace having been said by the Rev. J. Browne, the assembly partook of the cold collation set before them, and which was served up in the best style, by Mr. Cooper, of Queen's-circus. The band of the Coldstream Guards was in attendance, and, during the repast, played some appropriate airs. At the close of the breakfast a variety of toasts were drunk.

The Chairman, Committee, and other gentlemen then proceeded in the following order to open the Crystal Building:—

The Coldstream's Band
Mr T. Volle, Hon Sec. Mr G. Parsonage, builder.
Rev. A. Boyd. W. N. Skillicorne, Esq. Rev J Browne.
W M. Tarit Esq. Dr Shaw. Rev Dr Brown
Members of the Executive, Fine Arts, Museum, and General Committees.

The route the procession took was down the principal walk, across the Archery-ground, and through a tent in which pottery, implements, &c., were displayed, entering the Exhibition building at the lower door, to the tune of "Annie Laurie," and proceeding straight to the transept. Arrived here, the Chairman and his two reverend supporters took their station on a small stage, placed in front of the fountain, the members of the committee, and many others who had followed, ranging themselves around. Then came a flourish of trumpets, and the Hon. Secretary declared the opening of the Exhibition in the following terms:—

God save the Queen. Cheltenham Great Exhibition, 1854. We hereby, on this day of June, in the year of our Lord one thousand eight hundred and fifty-four, and in the seventeenth year of the reign of Her Most Gracious Majesty Queen Victoria, do declare the said Exhibition opened.

The trumpets again sounded, the doors of the transept were thrown open, and the public were admitted.

The assembly was then addressed by the Rev. A Boyd, upon the great object of the Exhibition. At the close of the address, an orchestra of some hundred voices, selected from the various church choirs of the town, and including also several clever amateurs, accompanied by the Cheltenham Summer Band, struck up the National Anthem—these musical arrangements being ably conducted by Mr. B. H. Cox. The National Anthem concluded, the choir proceeded to sing the Hallelujah Chorus, "the Heavens are Telling," "Sing unto God," and "Awake the Harp," closing with "Rule Britannia," while the band and the gentlemen who accompanied him, proceeded to the upper portion of the building, and opened the Fine Arts' Section. Passing through this department, they left the building at the top entrance, and proceeded along the walk which bounds the county ball, to the Music-hall, which, also, to open the Museum of Curiosities and Works of Art there arranged. Here five fountains were in full play on the lawn. Arrived at the Music-hall, the doors were thrown open, in answer to a flourish of trumpets, and the centre of the building and its supporters was greeted by an appropriate performance on the organ, by Miss Evans. This closed the formal business, and the company, to which there had been a large accession by the arrivals after breakfast, proceeded to view the wonders which had been arranged for their inspection, to ramble in the grounds, and to amuse themselves in any other way they pleased until nearly seven o'clock, at which hour the gates closed—the whole day, to all present, having proved one of unalloyed enjoyment.

The Exhibition is open daily, and in consequence of the Whitsun-holidays, the committee kindly determinated that the admission on Tuesday, as well as on Monday, should be only one shilling. The admission on other days is half-a-crown.

MALAPROPOS CORRESPONDENCE.—In a law case before a Dublin Court last week, in which the Marquis of Sligo and Sir James Dombrain were litigants, counsel read the following letter, written by Sir James to his solicitor, Mr. Jeffers, in 1853. "Dear Jeffers, I inclose a list which I have this day received from the noble Marquis Did you ever see such a shallow pated fool. We must squeeze him. Warn Gibbot not to let the country people cut down a tree without our consent. We can use flying seals as well as his Lordship.—Yours, &c. J. Dombrain." This letter was sent by mistake to the Marquis, who replied as follows:—"Dear Sir James, this day received a letter from you, but found it to be incomprehensible, until I discovered that it was addressed 'Dear Jeffers.' You should take care not to write so of me, nor allude to me, in the manner things happen on the stage, they are not a little rare in reality. However, I dare say you will not mind the mistake much, though it may make you feel a little awkward when you next write to me. It is very difficult to explain to a man that you have a polite or courteous meaning towards him in calling him a 'shallow-pated fool,' or that you are possessed of the most open intentions when you express a wish 'to squeeze him.' Read your letter; that is a fact; and as it was directed to me, it is your fault, not mine.—Yours, &c., SLIGO."

THE present military stock is about to be abolished, and a new pattern stock has been sent in for inspection. The inventor is a Spanish teacher fitted with horse hair, is very thin, and is 2 feet 7 inch.

PRESENT CONDITION OF THE ARMY.

(From our Military Correspondent)

RECENT experience has at length convinced the British nation of the culpable indifference shown by the authorities respecting the efficiency of the English soldier. During a long period of years we have witnessed the exertions of our Continental neighbours in improving the interior economy of their armies. They have discarded what was cumbersome and superfluous in the appointments, and directed attention to the better arming and clothing their troops. We have seen their *materiel* placed on a superior footing, while long-cherished systems have been discarded to make room for better-organised arrangements. On the part of the French neither pains nor money has been wanting towards effecting improvement in every branch. Annual encampments and reviews on an extensive scale were put in practice for the purpose of testing the efficacy of numerous changes which had been introduced, as well as to accustom the men to disregard annoyances inseparable from a soldier's position when in the field. The bearskin cap and harrassing accoutrements worn by Napoleon's Imperial Guard have passed away, and every alteration decided on and put in practice has proved beneficial, and consequently disseminated satisfaction throughout the entire army. Instead of being oppressed with the heavy belts and pondrous knapsack, as of yore, the Frenchman of the present day marches with ease and comfort to himself, and can compass an extraordinary number of miles with comparatively little fatigue. Loosely but yet well clothed, furnished with arms manufactured on the most recently approved principles, and a pack so poised and lightened as not to impede his movements, he offers a striking contrast to the appearance of the British soldier when paraded in heavy marching order. The equipments of the three battalions of Foot Guards now in Turkey do not vary in burdensomeness from those they carried in 1815. The cut of the coatee has indisputably undergone varieties of alteration since that period; but its characteristic objections are preserved. The felt cap, higher in front than behind, which was worn at Waterloo, has been superseded by the bearskin, which, in windy or wet weather, becomes a most inconvenient and defenceless head-dress. The broad straps of buffalo leather crossing each shoulder, the heavy pouch, and unwieldy knapsack—the fastenings of the latter binding the arms and compressing the chest, together with the stock impeding respiration, up to this date flourish in all their pristine absurdity.

A few nights since the Secretary-at-War informed the House of Commons that a newly-invented covering for the soldier's neck was under consideration. The right honourable gentleman was understood to say that a pattern, on improved principles, had been forwarded to Turkey, for the sanction of the General commanding the expeditionary force. Such being the case, a considerable period must elapse before the highly necessary change can be effected, and the present campaign will have terminated prior to the issue of the much-desired boon. Surely Lord Hardinge has sufficient experience what a soldier suffers in a hot climate, under the present regulations, without deeming it necessary to protract the amendment, by entering on a correspondence with an officer at Scutari or Varna! There are hundreds of practical men now in England, whose suggestions could readily obviate the evil, and the new articles should be fabricated forthwith, and at the least possible delay dispatched to their destination.

The Royal warrant regulating the future positions of Colonels of regiments, in regard to clothing, and the emoluments they are to receive, was issued on the 6th inst. Much praise is due to Mr. Sidney Herbert for his exertions. Through his instrumentality the soldier may now hope to receive his clothing equal in quality to the amount of money voted by Parliament for that especial purpose; added to which it will relieve the Colonels from a false position, in which they have hitherto been placed, by being given regiments with a tacit understanding that they were to draw their salaries from the off-reckonings. In future, the Colonels of the three regiments of Foot Guards will each receive a fixed sum of £1000 annually. The Commander of the King's Dragoon Guards—that corps having eight troops—will draw £800. Other regiments of Dragoon Guards and Dragoons, £450. The 1st Royal Regiment, having two battalions, £1200; and all other battalions £600 separately. If, therefore, the sums charged against the public for clothing the Army is allowed to retain its present amount, there is no reason why British troops should not be clothed and equipped equal, or perhaps superior, to those of any other nation. But as yet no alteration in the costume has been authorised beyond white linen covers for the helmets and shacos, as preservatives against the heat of the sun.

The decided opposition manifested by the Duke of Wellington against improving the dress of the Army is proverbial, and the frivolous excuse advanced for continuing in error, is said to rest on the supposition that, by pertinaciously adhering to so palpable a mischief, a "*graceful compliment*" is paid to the memory of a great man. How long this lamentable want of judgment may be tolerated it is difficult to define, but while the authorities remain imbued with such faulty hallucinations, so long must the troops suffer from unpardonable prejudice. The Indian Suttee immolates herself on her husband's funeral pile to purify the deceased from all offences, but in England the whole of the Army is put to torture in courtesy to the remembered opinion of a departed warrior.

Impressions made on the mind in early days are frequently difficult to eradicate in after life, and to that must be attributed the reason advanced by the late Commander-in-Chief for discountenancing innovations. His argument naturally sprung from recollections of the Peninsular glories. It was urged that splendid successes having been achieved during the late war, by troops armed with the now obsolete musket, and hampered with oppressive loads, why should not victory attend our colours, if unfurled under similar circumstances? It appears to have been overlooked that, forty years since, our opponents laboured under equal disadvantages with ourselves, but subsequently *they* have skilfully advanced towards perfection, while *we* remained stationary. The slow progress of the first heavy coach running from London to Edinburgh might with equal reason be advocated in the present day, when compared with the rapidity of railway travelling.

It was hoped at Chobham might have suggested some definitive mode of rescuing the soldier from the inconveniences he now experiences on a long march; but, beyond occasionally parading one man from some half-dozen regiments, each arrayed in a new description of dress, nothing whatever was accomplished. The troops embarked for Turkey fettered with the same impediments which clogged their movements during the mimic engagements. Regiments of the line have been permitted to discard the bayonet belt, but the household infantry still carry that additional weight. A man's kit could be considerably diminished in bulk without, in the slightest degree, encroaching on his fitness for all duties. By substituting black belts for white, as in the case of the rifles, the necessity for carrying sponge and pipe-clay would be obviated. Two good shirts, and a couple of pair of stout socks, would be ample, without the present addition. By issuing well-tanned half-boots, the soldier would march with ease to his feet, and the blacking and shoe-brushes would be unneeded. The button-brush and stick, razor, shaving-brush, and one towel, are equally unnecessary. The stock and clasp should long since have been cast aside, and replaced by a small black cotton neckerchief. The forage cap might be fashioned so as to protect the ears and nape of the neck when in bivouac; and a leathern helmet should be substituted for the unsightly invent on generally known as "the Albert hat." The Dockyard Brigade at Woolwich already possess the improved head-dress, while the regulars, actually in the

I, are indecorated to continue the hideous and unrecreative shako. The officers in her Majesty's yard have likewise assumed the comfortable frock, and entirely discarded the coatee—a privilege denied to the line The militia have adopted the more sensible costume, and wear it at all undress parades.

One of two reasons has hitherto influenced adherence to inconsistency with reason by enforcing regulations contradictory to obvious truth. Either the authorities were biassed by unconquerable aversion to any deviation from what was considered perfect in their bygone youth; or else the pecuniary advantage reaped by following in the beaten track preponderated when weighed against consideration for the welfare of the service. So many departments claim the right of meddling with the administration of the Army, that surprise cannot be felt at the numerous blunders recently perpetrated. But it rests with the General Commanding in Chief, to remodel the dress and appointments, so as to place the English soldier, at least, on a par with the gallant and well-equipped allies with whom he is acting. Should these important points remain unheeded, we shall experience loss in more ways than one. On a long march the men must unavoidably straggle from sheer fatigue, and become incapacitated for work. These vacancies must be filled up by constant drafts from England at an enormous expense, which a little sound judgment, promptly exercised, might avert. But, if blind infatuation continues in the ascendant, at any rate let something be conceded in favour of the men who are risking health and life in support of their country's honour. The abominable stock is at length to be cast aside, even though no further change be sanctioned. That alone will prove an acceptable boon, and the British soldier will be found to fight equally well if permitted to breathe, as when half choked by a collar which is neither ornamental nor useful.

The Ordnance and the Admiralty offer striking proofs of what could be accomplished towards improving their different services, and it must ever form a source of regret, that the Horse Guards did not sooner follow the excellent examples set before them.

REFORM IN ARMY CLOTHING.

The following announcement on the subject has been issued from the War Office:—

(Circular, No. 1162.) War Office, June 6, 1854

I have the honour to inclose you a Royal warrant, regulating the future position of Colonels of regiments in regard to the clothing of their regiments, and the emoluments which they are to receive; and explaining to the rest of the Army the system in use in the Household Cavalry, by which the Colonels, in lieu of clothing the men, receive a fixed annual payment in lieu of varying profits derived from the off-reckonings.

In adopting this mode of payment—which is in accordance with the principle which ought to regulate the issue of all public money, and will put an end to much misrepresentations to which the Colonels of regiments have been unjustly exposed—I am anxious that the change should be effected as not to injure the interests of the officers who will be affected by it.

In cases, therefore, in which the Colonels of regiments, having but lately issued accoutrements to their regiments, have either had very reduced profits, or have been exposed to a loss for which they have not been compensated by higher profits in previous years, or for which they would have been reimbursed by a surplus in subsequent years, I shall be prepared, upon a statement of accounts of past years, since the Colonel has had the regiment, being forwarded to me, to make compensation sufficient

THE WAR.—"THE FIRST SHOT."

(From a Correspondent.)

H.M.S. *Sidon*, Kustengeh, Black Sea.

I send you a sketch of the place at which (to the best of my know ledge) the first shot was exchanged between the Russians and English; and, although a trifling affair, it may be thought worthy of notice for that reason.

I must first tell you that the *Magellan*, French war-steamer, and ourselves, are on detached service from the fleets, and have been stationed to watch the coast from Kavarna Bay south to the Sulineh mouth of the Danube north. On the 11th April we were lying quietly at anchor off the town of Kustengeh, Bulgaria; two of our boats and one from the *Magellan* were on shore watering. About eleven a.m. the look-out man reported a large body of Cossacks coming over the hill at the back of the town, and advancing rapidly towards it. A gun was fired as a signal to the boats to return to their ships, as they only had two or three mu-kets with them, and no other arms.

A number of the Cossacks, on their arrival in the town, dismounted and formed in open order on the high-ground, where they got just out of the boats' head shoved off. An exchange of shots took place, and one of the Cossacks was seen to fall; the remainder, not ex xecting any resistance, retreated behind the houses, where they kept up a fire upon the boats until they were out of range, happily without effect, which does not say much for their aim.

As soon as we saw from the ships that the boats had left the beach, the Frenchmen and ourselves fired shot and shell, which, in about a quarter of an hour, cleared them out of the town. One shell from our pivot-gun, at the almost incredible distance of 3500 yards, burst right over the retreating body; and from the mast-head they were seen to stagger about in all directions. We were also m aning and arming our b ats to send on shore to attack them, but, owing to the short space of time which elapsed from their entry into the town to their exit, they were of no serv ce.

The town of Kustengeh contained about 1600 inha bitants, principally Turkish, who deserted it on the 28th of March, leavi g the approach of the Russian army, who were then within sixteen hou rs' march of the place. There were only remaining about a dozen Gre ks; and some of whom we saw from the ships run towards the Cossacks , and give them information that our boats were on the beach, which they could not otherwise have known; and such treachery towards us gu es far to prove the desire of the Bulgarians to place themselves under the Russian rule. There were large quantities of grain left in the stores, wh ch, no doubt, will be a great attraction to the Cossacks.

It should be explained that in the Sketch the ships are sh own nearer to the town than they actually were.

THE "MAGELLAN" AND THE "SIDON" ATTACKING KUSTENGEH, ON THE BLACK SEA.

THE SIEGE OF SILISTRIA.

(From the Times.)

SILISTRIA, May 11.

Finding nothing likely to take place in Schumla beyond the ordinary routine of camp duties, the usual gossip of the place, and speculations as to what would occur—all of which had long since lost their relish for novelty—I resolved, in company with another English officer, to pay a visit to the Turkish outposts in the Dobrudja. We accordingly started on the 4th inst., and rode to Kosludji, a distance of forty-eight miles. After passing the plains of Schumla, which extend for a distance of fifteen miles in the direction of Yeni-Bazar, the country presents a more wooded appearance being still, however, a succession of large plains, or rather slightly undulating ground, with one or two villages at long intervals. Kosludji is a village of no particular importance, containing about 1000 souls, and is situate at the base of a small range of hills. The next day brought us to Hadji-Oglou Basardschik (thirty miles), after passing through a finely-wooded though badly-watered country, very thinly inhabited, and for the most part devoid of cultivation. On our way we met several long trains of bullock waggons, containing unhappy Bulgars transporting their *lares* and *penates* from their now unsafe homes to Schumla for protection. On arriving at Basardschik, we were conducted to the quarters of Mehemet Pacha, a Chief of Bashi-bozouks, who commands in this district, and for whom we had a letter of introduction from Omer Pacha. He seemed a shrewd, intelligent little gentleman, and showed us much civility during our stay. Basardschik is the last regular advanced post of the Turkish army in the Dobrudja; from which reconnoitring parties are pushed forward and temporarily stationed in some of the deserted villages, whence they make constant incursions on the Russian outposts in the vicinity of Kara-su, Rassova, Beilik, &c. It is occupied at present by about 800 or 900 regular cavalry, and about 3000 Bashi-bozouks, 1200 of whom are quartered in the town, and the remainder in tents on the south side. The town is situated on the extremity of a gentle slope, surrounded on three sides by ground of a similar description. It presents a most desolate appearance, half of it having been destroyed by fire about a month ago; the remainder is deserted by its inhabitants; and Bashi-bozouks, with their horses, are now quartered within its ru ned houses: these, with starved hungry dogs and cats, are the only living occupants of a fine town that must once have contained 6000 or 8000 inhabitants. It gives one the idea of a town lying under some grievous curse, "the abode of every foul and unclean thing, the dwelling of beasts of prey"—a term most applicable to some of its unsouth occupants, who stable their horses within its walls. They present a most cut-throat appearance as they lounge and loll about the streets, scowling at the passers by, seemingly engaged in speculating on their chances of plunder. After halting here a day we left, accompanied by a small escort of our friends the Bashi-bozouks, provided by Mehemet Pacha, with the intention of falling in with, if possible, a reconnoitring party, which he told us we might perhaps find starting from Bairamdere. About a mile's distance we passed one of those strange tumuli which form so peculiar a feature in the scene y of this country, and have afforded material for the speculations of more than one learned *savant*—a fact which deters me from troubling you with any theory of my own as to their origin. At present they are made available for the posting of videttes of regular cavalry thrown out from Basardschik; and, being about 600 to 800 yards apart, and rising to thirty feet above the plains, are well adapted for the use they are now put to. We traversed in our route splendid plains, but barren and laid waste, bearing all the marks war brings in its train that the most eloquent member of the Peace Society could desire to witness—ruined, burnt, and deserted villages, neglected fields, the tots' absence of population, wells, which in this country are most valuable property, choked up, and the barley which had been stored for the coming year, gave to the whole scene a most dreary and melancholy aspect. This, we were told, is the state of the whole of the Dobrudja, and by what we saw of the country it appeared to have already been the theatre of a long campaign. The burning of the villages was not, however, the work of an enemy, but of Mus a Pacha in his retreat from the Dobrudja, and also of those practic s of the Bashi-bozouks. As evening was closing in we met several st ng parties of these gentry proceeding sou who informed us that the troops, after a skirmish with the enemy, were retiring, and had a ready marched through Bairamdere. On reaching this place we hailed two of these cavaliers, who corroborated the previous statements, and declared that there was nothing behind them but *giaour peccorada* (meaning the Russians). While speaking to them we heard shouting and yelling to our right, and observed a few solitary horsemen coming down the hill, from the opposite side of the town. These, we were told, were the Russian Cossacks, and while we were reconnoitring them through our telescopes, a large body of horsemen emerged from the glen from which we had heard the yelling. They proved to be a corps of Arab irregular cavalry, returning from one of their reconnaissances in the direction of Kara-su. A wild-looking set they were, with their swarthy handsome faces, and dark piercing eyes glaring from beneath their gaudy head dresses, which, with their stripped blankets hanging loose from their shoulders, gave a lively and picturesque appearance to their straggling line. We turned our horses' heads and joined this corps, one of the officers of which told us that they had had a brush with the Russians, in which they had killed four of the enemy, and took one prisoner. He also stated that they had been twenty-four hours in the saddle; and in spite of this, instead of sparing their horses and husbanding their already exhausted powers, every now and then some few of them set off at full speed, brandishing their arms and lances, and yelling like maniacs. During the short time we were with them, we had an opportunity of witnessing the effects of this on their cattle, by seeing two of their gallant little horses drop down dead from sheer exhaustion. Night was now fast approaching, and the whole regiment set off at a smart canter, leaving us, who were more careful of our beasts' seeing they were our own property (a circumstance which makes a mighty difference in such cases) to get on as best we could. As we followed we saw their camp-fires burning at a considerable distance; but being occasionally obscured by the unevenness of the intervening ground, we began to think that we were mistaken, and that the lights we saw were Will-o'-the-wisps. Having come to this conclusion, we agreed on tugging our jaded horses after us for five minutes longer, and bivouacking for the night by the roadside, although a drizzling rain was falling. About the end of this time a messenger from the Commanding Officer met us, and told us that the Colonel, having heard of two travellers being in the rear, had sent his compliments, and asked us to come up to his hut. Never was message more welcome to belated wanderers in search of adventure; and our guide conducting us by a short cut into the middle of the camp, we had an opportunity of seeing groups of these wild sons of the desert in all sorts of picturesque attitudes, gazing with a half indolent, half curious stare on the Giaour intruders. On reaching the Colonel's hut we met with a most cordial reception, and we, not without reason, thought him the best friend one could meet with in a long day's march, for we certainly met with most genuine hospitality during our sojourn at his station. While treating us to the usual pipes and coffee, he took care to provide for our more substantial comfort by giving directions that one of the deserted houses in the village close by should be cleared out and prepared for our reception, and an ample share of his own rations sent there. After bidding our kind host good night we repaired to our domicile, which far surpassed our most sanguine expectations. We found a clean floor (albeit of mud) and a cheerful fire blazing on the hearth, by the light of which we discussed our frugal meal with an appetite and feelings which only those who have had a long fast and march (fifty-four miles) can experience. Next morning we paid him a visit, and found him seated with his domestic chaplain (a dancing Dervish!) at breakfast. On our telling him we wished to get on to Silistria, he entertained us most hospitably. His dinner, in the true Turkish fashion, was served up one dish at a time—first, soup, to which each helped himself by spoonfuls; then roast duck, next roast lamb; then a huge flat cake; then, kabobs; then, a sweet dish; after which we thought our labours were at an end; but, to our horror, a huge pilaff was placed before us. The old gentleman's ample, unaffected, yet courteous and well bred manner, together with the style of his who'e establishment, spoke of the Turk of the old school, and reminded one very much of the accounts of our own feudal times.

Yesterday we reached this place without having encountered any Cossacks, who, we were informed, made occa-ional marauding excursions from Beilik. On our arrival we found everything in readiness for the Russian attack, which must come off in a very few days, as the whole of the works constructed on the islands opposite will be destroyed by the rising of the Danube. Four more battalions of infantry will be thrown in in the course of a few days, and Omer Pacha declares that with this and the forces now here Silistria must stand or fall. It may be considered presumption on the part of your correspondent to criticise the plans of a General who has received so much praise from abler hands, but it does seem to be a great error to leave a place of such importance unsupported, our loss of which would be of such incalculable advantage to the enemy. The strength of the garrison is supposed to be about 16 000 of all arms; that of the Turks, including the four expected battalions, about 15,000. The former are carrying on their operations against the fortress with wonderful energy and activity, and have nearly completed a zigzag of approach on the island of Schtiluk, whence they will most likely attempt their crossing. The Turks are not idle, and have, under the direction of a Prussian artillery officer, named Grach, erected considerable works, and to whom the Turks are indebted for many of their improvements strengthened and added to the defences of the place.

4 p.m.

The cannonade has just commenced. Balls and shells in all direction

May 12.

I had just time, at the conclusion of my last letter, of the 11th inst., to inform you of the commencement of the Russian cannonade against this place, which commenced about four p.m., and was immediately answered by the Turkish batteries. It was kept up pretty briskly on both sides till after seven, when the enemy began to slacken their fire, and by eight o'clock it had ceased entirely, the Turks having the last shot. At the commencement of the firing numbers of the enemy's shells fell and burst among the streets and houses of the town, and the whole place was soon a scene of painful excitement—scared women and children running wildly about seeking for shelter; the terrified inhabitants collecting their goods, and hurrying to the subterranean rooms which they had constructed in anticipation of this event; and by the time my friend and I were mounted, and on our way down to the battery on the Schengil bastion, we found the whole of the streets silent and deserted. On reaching the battery we found Musa Pacha, the Commandant of the garrison; Hussein Pacha, of Turkish artillery; and Colonel Grach, the Prussian Instructor of Artillery; and, while there, we were particularly struck with the admirable manner in which the Turkish artillerymen worked their guns: their master practice was excellent, most of the shells bursting in or immediately over the Russian batteries. The practice of the enemy was very slovenly, and, on the whole, indifferent; as our list of casualties only shows one cha seur and a horse killed, a peasant and a child in the town wounded, and a trading shallop on the bank of the river destroyed. As an instance of the carelessness of the Russian artillery, we found an 8-inch shell fired by them with the fuze uncapped; and I was told this was by no means a rare occurrence. Considerable damage, however, has been done to the buildings of the town; and, as far as shattered roofs and broken walls testify, the luckless inhabitants, who are the principal sufferers on these occasions, have but small cause to thank their would-be protectors.

Towards five in the evening an opposition cannonade was got up overhead in the shape of a thunderstorm, and a perfect rainbow which followed appeared as if in mockery of the belligerents below, who were hammering heartily at each other. On the morning of the 12th, we observed a battery of four guns had been thrown up during the night on the adjacent island of Salhaneh, which had not been previously occupied by them. During the whole of this forenoon (the 12th) the enemy seems to be engaged in transporting ammunition and stores from the mainland to the island of Hopper, as their boats and shallops made frequent passages from one side to the other, and towards evening large bodies of infantry were seen moving down to the water's edge, for the purpose, as we concluded, of being thrown into that island. No attempt has been made to cross as yet, and it seems to me that the enemy are much more likely to take advantage of the position they have now obtained in the Dobrudja to throw across a force and march against this place by Rassova and Beilik. Had Mustapha Pacha, when he retired in disorder through the Dobrudja, retained the line of the Kara su, the siege of Silistria would have been a much more difficult affair than it is now, as the passage from the island must always be a considerable obstacle to an assailant. Had the line of the Kara-su been retained, which I believe was quite possible, the siege would have been a very different affair, as the great obstacle, viz., the passage of the Danube, is now overcome.

The Turks have not been idle, and Musa Pacha is indefatigable in his exertions. My companion, Captain J. A. Butler, Ceylon Rifles, and myself have tendered our services during the siege. As we are in force, you may expect a most full account of it as soon as Omer Pacha or the Allied Generals may deem it fit to raise the siege. News has just come in that a large body of Russians is within twelve miles of the place, and they have succeeded in driving in our cavalry outpost at Yenikoi, with a loss on our side of forty killed and wounded. To-morrow we may expect to see them here.

THE TURKISH COMMANDER OF SILISTRIA.—Silistria is decidedly the best fortified, best appointed, best victualled, and now best garrisoned stronghold in Bulgaria. It has for its commander Musa Khoosool Pacha, president of the Artillery Council of the Ottoman empire—an officer of the highest intelligence. He has received an excellent education under a Turkish Pachá), and has been well instructed in all the details of European armament, drill, and system of artillery. He was sent, some years back, to fortify Silistria, which then could only boast of the enceinte which the Russians had breached and taken in the last war. With him were a few European engineers and artillery officers, the chief of whom was Malinofski, the principal designer of the exterior fortifications. The Pacha's judgment on this occasion was acknowledged to have shown itself to be of no mean order; and among other ways in which he proved it was one invaluable in his position as military governor, namely, in implicitly following the plans of the designer to the minutest particulars, for it was unde, him, that the most of the repairs and new forts were afterwards constructed. He originally was to have been the Governor of Varna; but Omer Pacha, thinking that Silistria was a more important point, changed his destination. Among other persons composing the garrison, is an officer of artillery, who served for many years in Prussia in that arm. His name is not mentioned here, as it might be inconvenient for him hereafter, possibly. To him is due the efficiency of the Ottoman artillery regiments, of which he is the instructor. He has been garrisoned at Silistria for a considerable period. He knows exactly in which direction every gun in the fortress and outworks ranges, for it was he that installed them and assisted at the embrasures and barbettes. Not a shot or shell under his orders is mislaid. He knows to an ounce the quantity of powder in hand, and how it is distributed. He has received the high y practical and theoretical education of a struck artillerymen; and in our whose *savoir vivre* and *savoir faire* will enable him to bring his knowledge to bear in every circumstance. He is, moreover, much liked by the Turks, who consult him on all occasions, and always address him as Pacha. He is invariably addressed by them as "usta," or "master" of an art.

A NEW WAR PROJECTILE.—An ex-officer of the armies of France and Italy has just arrived in Paris, to make known a war projectile, which he calls the *Grenade Explosif*, and which, according to him, produces terrible effects. This projectile, he says, can arr ve in the midst of masses in a form which does not betray its nature, and, in an instant, in the range of numerous armies and sink entire fleets. A single explosion . . . stated, would produce these frightful results.

DURING the last week Captain E. Ford, of the Royal Engineers, has been inspecting the forts and defences in the nor in order to draw up a report regarding them, preparatory to their b ing placed in a proper state of defence.

LAUNCH OF A STEAMER AT GREENOCK.—On Wednesday week there was launched the *Heligoland*, the property of Messrs. John Cesar Godfrey and Sohn, represented in this country by Messrs. Robinows and Marjor.banks, of Glasgow and Leith. The length of the *Heligoland*, keel and fore rake, is 185 feet, breadth of beam, 27 feet, depth of hold, 11 feet; and height of poop, 2 feet. She is to be propelled by a pair of oscillating engines of the collective power of 300 horses, and is expected to be of great speed.

THE PAPER TRADE.—Some leading paper manufacturers have recently called the attention of Government to the consequences likely to arise to their trade from the present war with Russia. It appears that the supply of raw materials for the manufacture of paper has of late years barely met the enormously increasing demand, in spite of many new substances worked up; and it is now feared that the short supply and dearness of all fibres and textile fabrics will prove very detrimental to the paper trade and the literary world. In consequence of these representations, circulars have been issued by the proper authorities to the governors of our various colonies, calling their attention to the necessity of finding some substitutes, within our colonial territories, for the materials at present used in paper making.

THE ENGLISH TROOPS AT SCUTARI.

EXTERIOR OF BARRACKS AT SCUTARI.

THE humble quarters in which Lord Raglan lives, at Scutari, are the centre of intelligence in these busy times; Generals, Brigadiers, Colonels of Regiments, Commissary Officers, and Aides-de-Camp, may be seen flying to and from it every moment of the day as fast as their horses can carry them. The Sappers are busy fitting up horse-boxes on board the transports, and all the stores required for the troops have been already put on board. Looking away to the Sea of Marmora, the white sails of transports and store-ships, making way against the current, are visible in all directions; and the little wharf and landing-place at Scutari is alive with men, working away in loading boats with casks of provisions or munitions of war; while the air is shrill with the creaking and screaming of the wheels of buffalo-carts toiling up and down the steep ascent to the barracks. In strange contrast to all this life and activity, the natives lie idly on the shore, scarcely raising their heads to look at what passes around them; or take a very unobtrusive and contemplative interest in the labours of the soldiery as they watch them, chibouk in mouth, from booths pitched along the shore. Lord Raglan's quarters seem to be an especial resort for them. The house, which is a low wooden building—very clean, and neatly painted and matted within—is situate on the beach, about three quarters of a mile from the barrack. In front of it is a tolerably spacious court-yard, with high walls, well provided with little stone boxes for the sparrows and swallows to build in, and inside this court there is constantly a small stud of led horses and chargers belonging to the aides and officers on duty. Directly opposite to the entrance of the court is a wooded knoll, with a few grave-stones peering above the rich grass, and a Turkish fountain, in front of a group of pine trees surrounded by water-carriers, is in the foreground. Groups of Turks, Greeks, and Armenians, each distinct from the other, are generally to be seen reclining at the foot of these trees, and gazing listlessly into the court-yard, while they carry on monosyllabic conversations at long intervals, between the puffs of tobacco smoke. The beach, which somewhat resembles that at Folkestone at high water, is bounded by a tolerable road, which is a favourite walk of the women and children of Chalcedon, and the suburbs beyond it, but these animated bundles of bright-coloured clothing scarcely deign to look at the men in uniforms or to turn their heads at the jingle of sword and spur. In the stagnant water which ripples almost imperceptibly on the shore, there float all forms of vestiness and corruption, which the prowling dogs, standing leg-deep as they wade about in search of offal, cannot destroy. The smell from this shore is noisome; but a few yards out from the fringe of buoyant cats, dogs, birds, straw, sticks—in fact, of all sorts of abominable flotsam and jetsam, which bob about on the pebbles unceasingly—the waters become exquisitely clear and pure. The slaughter houses erected by the sea-side do not contribute, as may readily be imagined, to the cleanliness of this filthy beach or the wholesomeness of the atmosphere. On a slope rising up from the water's edge, close to Lord Raglan's quarters, the camp of the brigade of Guards is pitched; a kind of ravine, about a quarter of a mile across, divides it from the plateau and valley at the back of the barracks, in which are pitched the camps of the other regiments and of the light division. Clumps of tall shady trees are scattered here and there down towards the water's edge, under which a horde of sutlers have erected sheds of canvas and plank for the sale of provisions, spirits, and wines, combined with a more wholesome traffic in cakes, Turkish sweetmeats, lemonade, and sherbet. The proprietors are nearly all Smyrniotes or Greeks from Pera, and do not bear the highest character in the world as respects their moral qualities. The regular canteens established within the lines are kept by a better class of people, and are under the *surveillance* of the military authorities, but it is said that permission to erect some of these temporary canteens has been obtained through bribing the lower classes of native interpreters. Syces, or grooms, with horses for sale, ride about at full speed through the lanes and pathways leading to the camp, but the animals they bestride are generally small bony garrons with mouths like vices, stuffed out with grass and green food, and not worth a tithe of the prices asked by the owners. These gentry are kept at arm's-length, and are not allowed to come within the lines. All this scene, so full of picturesque animation—these files of snowy tents, sweeping away in tier after tier over hillock and meadow, till they are bounded by the solemn black outlines of the forest of cypress—these patches of men at drill here and there all over the plain these steadier and larger columns at parade—this constant play and glitter of bayonet and accoutrement, as the numerous sentries wheel on their beaten tracks—this confused crowd of araba drivers, match sellers, fruit and cigar and tobacco vendors, of kamals or porters, of horse dealers, and gaily-dressed rogues and rapparees of all nations, will disappear with the departure of the troops to Varna, and leave no trace behind except the barren circle which marks where the tent once stood, and the plain all seared and scorched by the camp fires. What is to become of the mushroom tribe which has started, as it were, from the ground, to supply the wants of the soldiery, it is hard to say, and not very interesting to inquire, but it will not be long ere they will find their way to the English camp in its new quarters. Among the most amusing specimens of the race must be reckoned some Jew and Armenian money changers—squalid, lean, and hungry-looking fellows, whose turbans and ragged gaberdines are ostentatiously dirty and poverty-stricken, who prowl about the camp with an eternal raven croak of "I say, John, change de monnish—change de monnish," received occasionally by a slip timkle of a leather purse well filled with dollars and small Turkish coinage. They evade the sentries, and startle officers as they lie half asleep in the heat of the sun, by the apparition of their dusky hands and yellow visages within the tent, and the cuckoo cry, "I say, John, change de monnish." Their appearance at Scutari at all is the greatest compliment that could be paid to the national character. The oldest Turk has never seen one of them near a native camp, and the tradition of ages affirms that where soldiers come the race disappears. Indeed they only show in the sun-time. They are a sort of day ghost, who vanish at the scent of darkness, and the croak and the jingle are silent, and they grub themselves gently away ere twilight, and where they live no man knoweth. Any one who has seen Vernet's pictures in the Louvre of the taking of Abd-el-Kader's Smala, will at once recognise the type of these people in the wonderful figure of the Jew who is flying with his treasure from the grasp of the French swordsman.

Rumour has it that Lord Raglan, and the Generals and others who accompanied him to Varna, had rather a rough, but eminently practical, experience of what is to be expected in that district, unless the Commissariat be well attended to. It is said that, on their late journey, he and his staff had to travel for more than twelve hours without a morsel of food. The Commissariat will evidently have a very hard task to perform at Varna, in provisioning so large an army in a country which is cut off from the feeding ground of the Dobrudja by the Russians on the one hand, and which is drained by the exigencies of the masses of Turks concentrated near Schumla, on the other. It is to be hoped they have made good and effectual preparation for the force, and that they will not be taken quite by surprise. There is no beef to be had even at Scutari just now, but the supply of mutton and lamb is sufficient, and about 800 sheep and lambs are slaughtered every day at the shambles of Scutari for the army.

The accompanying Illustrations are from Sketches by Correspondents—the Officers' Quarters, in the Turkish Barracks, at Scutari, and the upper Engraving shows the Entrance to the Barracks with more than its characteristic activity.

OFFICERS' QUARTERS, AT THE TURKISH BARRACKS, SCUTARI.

THE BALTIC FLEET.

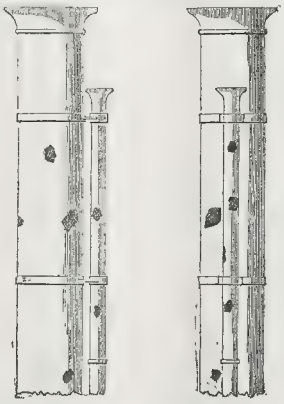
THE "DRAGON" SHELLING FORT GUSTAVUSVARN, HANGO.

EXPERIMENTS ON GUSTAVUSVARN.

(A portion of the following intelligence appeared in our Late Edition of last week.)

The fleet, or rather that portion of it under the immediate command of Sir Charles Napier, arrived in Hango-roads on the 20th May, and anchored within the extreme range of the enemy's guns. The squadron was allowed to take position unmolested by the guns from the forts on shore. Three insular forts protect the entrance to the harbour, massive structures composed of huge blocks of granite, casemated, evidently heavily armed with guns as well as mortars. The principal fort, called Gustavusvarn, sweeps the approach to the harbour with a long tier of guns, and also from casemate batteries beneath. Two other forts, Doman's Holm and Gustavus Adolphus, to the eastward of the central fort, rake the entrance, and are pierced with embrasures looking to seaward. The shore all round is covered with masked batteries, raised in commanding positions, concealed by trees and branches, and not very readily distinguished. From the preparations on shore it became evident that the Russians did not intend remaining silent.

In the afternoon of the 22nd the *Dragon*, Captain Wilcox, was ordered to take up a position close by an island, where a buoy had been previously laid down. This position flanked the principal fort, Gustavusvarn, and only two guns evidently, out of the many that mounted the walls, could be trained to bear upon her. The vessel was now ordered by signal from the flag-ship to try range of guns. She immediately opened fire. The first shot was good in direction, but fell a little short; the second struck the fort about the centre of the wall; the succeeding ones commenced ploughing up the turf forming the breastwork on the summit of the walls, and sending the fascines and sand-bags flying into the fort in profusion. After the second or third shot the fort replied. The ship and fort thus continued the engagement for about three hours and a half, during which several of the *Dragon's* shells burst right over the centre of the fort, and must have caused severe loss. Two of the shells which struck the walls did considerable mischief, smashing up one of the embrasures. The engagement was not a rapid one; on the contrary, a slow and steady fire was maintained on both sides. The *Magicienne* was ordered, somewhat later in the day, to a corresponding position on the opposite side of the small, narrow, rocky island in question, and opened an effective fire upon one of the masked batteries on the land side, into which she threw several shells. The battery replied with shell, and, it is thought, red-hot shot; but the *Magicienne* was evidently out of range. The *Basilisk* next joined the group. The *Hecla*, Captain Hall, was employed in engaging the fort Gustavus Adolphus. Several of her shot and shell told with great effect. All the shots from the fort against the *Hecla* fell short. The *Hecla* remained at her anchorage for the night. The other steamers were recalled about half-past four. The *Dragon* had one man killed and another wounded. She was struck three or four times.



ELEVATION. END VIEW.

THE SHATTERED FUNNEL OF THE "HECLA," STEAM-SHIP.

A GALLANT CUTTING-OUT AFFAIR.

Previous to these highly-satisfactory experiments on the batteries at Hango, two English vessels had performed a very gallant exploit in that vicinity. It appears that the *Arrogant* had been detached from the fleet for a considerable time, employed in reconnoitring the enemy's posts and shores about Hango Bay. While so employed, the *Hecla*, commanded by Captain Hall, whose services in the China War are so well known, joined her; and the Captains of the two ships planned a little expedition of their own, which turned out quite a daring and successful manœuvre.

The two ships proceeded up a narrow river, and, on anchoring on the evening of the 19th ult., the enemy, from behind a high sand-bank, in a thickly-wooded place, fired upon one of the boats, which was at that time pulling at a distance of from six to eight hundred yards from the shore, round shot also striking the *Hecla*. Both ships beat to quarters, cast loose their guns, loaded with shot and shell, which they poured into the wood and against the sand barricade, whence the enemy was quickly dislodged. The vessels were not further molested that evening, the anchorage was shifted for the night, and all made snug, with watches posted.

At two in the morning both ships again weighed, the *Hecla* leading, both ships' companies standing by their guns. After about three hours quietly feeling their way along the intricate navigation of the river, both ships came suddenly within range of an enemy's battery. The *Hecla* opened fire, which was quickly answered from the fort; the promontory upon which stood the battery was crowded with soldiers—fine stalwart-looking fellows, with long grey coats, and spiked steel helmets glittering in the sun. While the battery was firing upon the *Hecla*, the *Arrogant* let fly a whole broadside amongst the soldiery. A troop of horse artillery, when the smoke cleared off, was observed scampering away. A prolonged and heavy fire of musketry now ensued from the wood, and Minié balls fell thick on board both ships. The *Arrogant* now got aground within twenty yards of the battery. However, before attempting to haul the ship off, the enemy's guns were dismounted by a

THE "MAGICIENNE" ATTACKING THE RUSSIAN FORTS IN HANGO BAY.

broadside; and the ship was then got off in safety. On passing the fort where the guns had been dismounted, a terrible sight was witnessed—gun carriages blown to fragments, guns dismounted, helmets and knapsacks strewed about without owners.

The town of Eckness now opened, and there lay the ships, the objects of the expedition. The *Arrogant* was obliged to anchor here, as the water was shallow; the *Hecla* proceeded on, but another battery now opened fire upon her. The *Arrogant*, having broadside on, kept up a cannonade while the *Hecla* passed, firing shells on the enemy as she did so, ran up alongside of a barque, took her in tow, and steamed away with her, to the horror of the inhabitants. When this little expeditionary force was returning, they were joined by the *Dauntless*, she having been sent by the Commander-in-Chief to ascertain the cause and source of the firing, which was distinctly audible as the squadron steamed into Hango-roads. The *Hecla* had several shots through her funnel, steam-pipe and hull; one shot passing right through the ship's side. The round shot and shell went over the *Arrogant*. Both ships were studded with Minié balls. The *Arrogant* had one man shot through the heart, and a man wounded by a bullet in the navel, which ball went through his intestines, and passed out at his back. The *Hecla* had one man killed.

Captain Hall was resolved not to leave without carrying back some military trophy. He gallantly landed with his marines, threw them out as skirmishers, while himself and a party of men hoisted one gun (an iron one) into his boat, and placed it on board the *Hecla*.

The *Arrogant* and *Hecla*, with their prize in tow, joined the fleet on the 21st. The Commander-in-Chief hoisted the signal, "Well done, *Arrogant* and *Hecla*." The flag ship manned the rigging; her example was followed by several other ships—all of which gave the heroes three hearty cheers.

By permission of the Lords of the Admiralty, we engrave the Official Plan of the above gallant affair. The Defences of the Point consisted of four 24 lb. iron guns, in a battery made of pine timber; a brigade of six field-guns, with horses; also four 3-lb. iron guns, in a sand battery. The third battery, at the inside point, was unfinished. At Lovisa were three large iron guns, in a pine-wood battery; and three field-guns, howitzers, worked by artillerymen.

We add the accounts with which we have been favoured by Correspondents:—

"On Saturday, the 20th May, after cruising for some time off Gotteka Sando, waiting for the junction of the French squadron, Admiral Sir Charles Napier, with his flag flying in the *Duke of Wellington*, 131, and accompanied by the French line of-battle ship *Austerlitz*, anchored with a portion of his fleet off the Island of Hango, in Finland, the *Lightning* steamer having been previously engaged in laying down buoys for their passage. The Gulf of Finland was supposed to be clear of ice, and some of the steamers had gone up to destroy gun boats, and to watch the enemy's motions. The weather ever since the fleet entered the Baltic had been remarkably fine, and the nights beautifully clear, though still a little cold.

"Sir Charles anchored the fleet just outside the range of the enemy's four batteries, mounting about 80 guns. On Sunday, the 21st, the ships were engaged completing provisions. In the afternoon the *Arrogant* steam-frigate, 47, arrived, with the *Hecla*, 14, towing a Russian prize barque, which had been "cut out" by them from under a battery, about ten miles to the eastward. As soon as the three vessels anchored, they were greeted by the whole fleet with genuine British cheers; the French on board the *Austerlitz* joining in, and the Russian soldiers in the forts looking on. On the afternoon of the 22nd May, the Admiral ordered the following steamers, viz., the *Dragon*, 6; the *Magicienne*, 16; the *Basilisk*, —; and the *Arrogant*, 6, to take up positions to shell the batteries. The Illustration represents them in the act of shelling these forts, which they did for about three hours. The *Dragon* received twenty shot in her hull two under water, and otherwise received some slight damage. She had one man killed, and one wounded. As the Russians would, no doubt, construe the withdrawing the steamers from under their guns into a defeat, it was generally supposed that Sir Charles would, on the 23rd, undeceive them on that point, by directing a general attack upon the forts by the ships of the line.

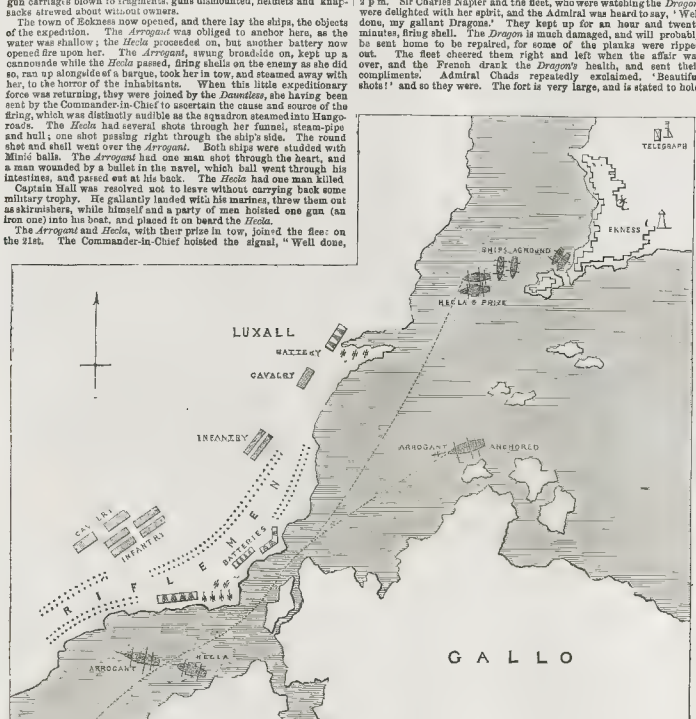
"The harbour of Hango is good; the land around low, and covered with a forest of fir, in which, it is said, large numbers of troops are concealed. There is no village within sight of the fleet. On the chart there is marked 'Tanks, *with good water*;' but as they are surrounded with trees, it would not be safe to land and get it. The enemy is a bold one, and, as there seems likely to be plenty of hard work for our men, no unnecessary risks must be run. Half the fleet had been left off Gotteka Sando, about fifty miles from Hango; and the French squadron had not yet joined."

"H.M.S. *Duke of Wellington*, Hango Head, May 22nd.

"The *Dragon* and *Magicienne* have tried the range of their guns from behind a small island, on Fort Gustavesvarn; the first shot the squadron fired, everybody was anxiously watching, with glasses, the moment the signal was made by the Admiral, 'Try range!' She fired very well, and quantities of shell burst right inside, throwing the black dirt up in the air. The *Magicienne* was then ordered to do the same. They fired about three hours, and dismounted one of the guns, and damaged the right-hand embrasure of the three facing the squadron. About four o'clock p.m., general recall was made, when they returned. The *Dragon* had one man killed by a round shot, and two wounded: her mast was shot off close to the end, nine shots struck her hull in different places. The *Magicienne* was not touched, I believe; they must have killed numbers, as quantities of their shot and shell went right into the middle of the fort. The *Hecla* all this time tried her guns at a smaller fort about a mile and a half to the right. One shot was brought on board from the *Dragon*: it was a 24-pounder; the distance 1800 yards.

Another Correspondent states that "On the 22nd ult., the *Dragon* 'opened the ball,' ordered in, by the Admiral, under the fort, to fire at 2 p.m. Sir Charles Napier and the fleet, who were watching the *Dragon*, were delighted with her spirit, and the Admiral was heard to say, 'Well done, my gallant Dragon!' They kept up for an hour and twenty minutes, firing shell. The *Dragon* is much damaged, and will probably be sent home to be repaired, for some of the planks were ripped out. The fleet cheered them right and left when the affair was over, and the French drank the *Dragon*'s health, and sent their compliments. Admiral Chads repeatedly exclaimed, 'Beautiful shots!' and so they were. The fort is very large, and is stated to hold 7000 men; and from the *Duke* could be seen some of the guns and men pitched up into the air. The *Dragon* only lost one man."

Our Correspondent adds:—"We cut out two vessels at Revel on Sunday afternoon. We have two unfortunate Russians on board, whom we took at Revel: we kept them on board the whole time we were there; they fell down on their knees, pointing to the shore; and when we took them towards the guns, they cried bitterly, and crossed themselves."



PLAN OF H.M.S "ARROGANT" AND "HECLA" TAKING A MERCHANT SHIP FROM THE PORT OF ECKNESS, IN THE GULF OF FINLAND, AFTER PASSING AND DESTROYING THE DEFENCES, MAY 20, 1854.

CAPTAIN HALL, OF THE "HECLA."—It is not a little singular that his services began in the Baltic, where his last laurels were won. At an early age he was a midshipman in the *Warrior*, when she was employed in the Belt, against the Danish gun-boats, to protect the convoys of our merchant-vessels. In 1816-17 Mr. Hall went out to China with Lord Amherst's expedition, in the *Syra*, and was employed in exploring the Gulf of Corea and the Loo Choo Islands. When in the *Iphigenia*, in 1822, he volunteered to conduct the boats of that ship to the attack of an armed slaver. Capt. Hall is one of the very few officers who, having chosen that line of promotion which stops at the position of master, was made an exception to that rule of the service, and made Commander for his distinguished services. He was Master of the *Parthian* at the capture of a piratical schooner in Campeachy Bay, in 1824. But his most distinguished services were performed in the *Nemesis*, during a second visit to the Chinese waters, in 1840-3. He was present at no fewer than twenty-seven different engagements, several of them very dashing affairs, and was named in eleven Gazetted despatches, frequently with high praise. In these engagements he was wounded, and has a slight halt in his walk in consequence.

THE RUSSIAN NAVY.—An article in the June number of *Fraser's Magazine* on the subject of the Russian navy states that the ships-of-war generally are dull sailers and difficult to manage; that many of the line-of battle ships are only suited for the navigation of their own waters, where they do not require to be filled up with water and stores as if bound for a distant station, and that the vessels, taken as a whole, are similar to the glorious old tubs with which our old naval glories were acquired. With respect to the important question of armament, the Imperial navy is utterly inefficient, and the gunnery practice still more defective. Of the ten paddle-wheel vessels of the Baltic fleet rated as war-steamers, only three of them can fight both decks. For power or tonnage they are not to be compared with our *Terrible* or *Retribution*; and their maximum speed is about seven knots. Most of them can hardly face a stiff breeze. There are three powerful sloops in the Black Sea fleet, and the remainder are paddle-wheels, neither large nor powerful. The active force is at present represented by the *Pantsoh*, a small schooner built at Northfleet, new on the Kamschatka station. The only first-class screw steam-frigate the Baltic did possess was lost in the year 1852, and it is not probable that any of the ships now on the stocks will ever be fitted with machinery, as the only resource is the Imperial works of Colpin. Compared with the armament of our ships, the Russian ships are far below the mark, more particularly in the Baltic than in the Black Sea fleet—the latter, in point of equipment, being much superior to the former. Taking from this fleet the three-deckers *Twelve Apostles*, of 120 guns, and the *St. George*, of 112 guns, and comparing the weight of their broadsides with that of our *Queen*, it is found that that vessel can throw a broadside exceeding in weight that of the *Twelve Apostles* by 2136 lb., and of the *St. George* of 1040 lb. This gives the *Queen* an advantage, as compared with the latter, equal to the possession of thirty-two 32-pounders—almost a whole deck; and, as compared with the former, of nearly five 32-pounders. At a distance of 7200 yards the *Queen* could pour her broadside of 58 guns into the *Twelve Apostles*, which could only reply with 34 guns: and the *St. George*, under the same circumstances, could only reply with 17. Our *Inspericuse*, 51, screw, throws a heavier broadside than an ordinary Russian 74; and our *Termagant*, 24, screw, a heavier broadside than some of the Russian 44-gun frigates. Of the three largest vessels of the Baltic fleet, the only Russian steamers which can fight guns on their main decks carry 28 and 12 guns respectively. The largest steam frigates in the Black Sea carry a 10-inch gun forward, and it is believed a second 10-inch gun, or 68-pounder gun aft, with four 24 pounders. The smaller steamers have a pivot 68-pounder, 68 cwt., and two 12-pounder carronades.

RUSSIAN SAINTS.—Some time ago the Czar sent pictures of his saints to Cronstadt, to protect the soldiers there. The last orders of the day issued at St. Petersburg, however, enjoined that, in the event of that city being threatened with a blockade or storm, all the pictures of the saints are to be removed to Moscow. The saints, which a few weeks ago were deemed able to protect others, are now deemed as incapable of protecting themselves as the old men, women, and children who are to be removed along with them.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The grand ball, to be given by the Lady Mayoress at the Mansion-house, will take place on Tuesday, the 27th instant, instead of Tuesday the 20th, as previously intended.

Piper-major Ross, of the 42nd Highlanders, who carried off the prize at the Northern Meeting last year, is to fill the vacancy caused by the death of Mackay, the Queen's piper. Ross gets his discharge from the regiment, and commences immediately his duties at the Palace.

Arrangements have been made for opening 44 miles of the Danish railway, between Tonning and Flensburg, for public traffic early in July.

The value of the imports into the colony of Victoria in 1853 was £15,842,637, of which about £13,300,000 was from Great Britain and British colonies, and about £1,700,000 from the United States. As the population last year was estimated at 300,000, this would give a consumption of about £60 per head.

The Marquis of Lansdowne has assisted 150 persons to emigrate from his estates in Kerry to Canada. Their passage, and all other needful expenses, are to be defrayed from Cork.

The Duke of Wellington has announced his intention to give annually a gold medal of his father, as a reward for historical proficiency in the Sherwick Grammar-school.

Mendicity is spreading rapidly at Madrid, a great number of families having been reduced to indigence by the stoppage of public works.

It is said to be the intention of the Bavarian Government very shortly to send a special mission to London, in connection with the Greek difficulties.

The Oxford Public Library was formally opened to the public last week, in the presence of the Mayor and a number of the leading citizens.

Mr. Edwards, President of the Honduras Railroad Company, reports that the Congress of Honduras has ratified the contract granting to the company 2,500,000 acres of land, to aid in the construction of the road.

The blockade of the Baltic ports has reduced the Customs revenue of the Czar for 1854 to one-fourth of what it was last year at this time.

The salaries and expenses of the Post-office for the ensuing year are estimated to amount to £1,525,325.

The state of St. Salvador was visited by a succession of earthquakes on the 16th of April, which nearly destroyed the capital. Nearly 600 families were buried beneath the ruins.

The American and West India mail-steamers brought in two millions and a half of dollars, besides £400,000 in English silver brought by the *Canada*.

Mr. Stephenson's tubular bridge over the Nile at Benha will, says the *Newcastle Chronicle*, be fit to rank by the side of the imperishable monuments of ancient Egyptian industry. It is to have ten arches, and is to be 370 feet in length. Unlike the Britannia-bridge, the railway will pass over the top.

The value of the cattle conveyed by the railways of the United Kingdom during the last year has been estimated as follows:—Oxen, £13,786,383; sheep, £6,511,897; calves, £1,08,293; pigs, £2,868,374: total, £23,478,7 7.

The grapes are looking well in the neighbourhood of Lisbon. The crop is very large, and, even allowing a good discount, there is a chance of an average vintage.

Lieutenant Strain's party, reported to have been lost in their attempted exploration of a new Darien route, are all safe again on the seaboard, with the exception of one man, who died on the return march.

Not less than eighteen or twenty defaulters were reported on the Paris Bourse on Monday, with liabilities amounting to 3,000,000 francs.

The number of British ships wrecked in the month of May amounted to 101. The record for April contained a list of 99 ships—making a total of 200 losses in the two months.

It is said that St. John's, Newfoundland, will be in direct telegraphic communication with all the cities in the United States, in October next.

Mr. Hunt has obtained leave to bring in a bill to afford greater facilities for the establishment of institutions for the promotion of literature, science, and the fine arts.

The *Madrid Gazette* contains a Royal order, stating that it is her Majesty's pleasure that all her Ministers shall, while acting in their official capacity, carry gold-headed canes, as emblems of authority.

The notorious Tom Provis, alias "Sir Richard Hugh Smyth, Knight, Baronet," the claimant of Ashton Court, was removed from Gloucester gaol to Millbank Prison, last week.

The inaugural profession of faith was made on Sunday at the Irish Metropolitan Roman Catholic chapel, by the newly-nominated rector of the Roman Catholic University of Ireland.

A general crusade against drunkenness has been commenced in New South Wales and Victoria. At Melbourne a Liquor Law League has been formed.

Chevalier Bunsen's son (the Rev. H. G. Bunsen, M.A., Vicar of Lilleshall, Shropshire, and domestic chaplain to his Grace the Duke of Sutherland) has been appointed "Lecture Secretary" for the Church Missionary Society, in the diocese of Lichfield.

Gold has at length been discovered in the only one of the Australian colonies in which it remained to be found. Letters from Freemantle, Western Australia, state that surface specimens have been obtained within fifteen miles of that place, yielding a good percentage of pure metal.

The farming class, as well as labourers, are again appearing amongst the emigrants from Ireland. On Friday last 200 emigrants left Waterford by one vessel; and they included several respectable-looking farmers and their families.

The Bishop of Gibraltar has submitted a project to the British Ambassador for the erection of an English church at Constantinople; and Lord Stratford de Redcliffe has promised to propose the subject to his Majesty the Sultan.

The police-force of Liverpool is said to be in a very disorganised state, and resignations are of frequent occurrence.

A collection of pictures has been purchased for the National Gallery, from Herr Kruger, of Minden. They are shortly expected to arrive in the country for delivery at their destination.

The Raughly O'Beirne Lighthouse, which is situated on the most dangerous part of the coast of Donegal, and has been erected for some years, has never yet been lighted.

A steamer *Gazelle* was wrecked on the Columbia river lately, killing twenty, and wounding thirty persons.

The British Electric Telegraph Company succeeded in laying down another submarine cable, on Friday week, between Portpatrick and the Irish coast.

The silver custodia, inlaid with jewels, together with maces of the same metal, and other silver articles belonging to the Corporation of Madrid, have been stolen.

HOME FOR INVALID CHILDREN.—A Physician, residing in a remarkably healthy locality, near London, wishes to receive TWO or THREE CHILDREN, who, from delicate health, or defective organization may require a more than usual amount of care, with which he can combine the comforts of a judicious medical and moral treatment, and intellectual culture. To Parents and Guardians about to make such an arrangement, address M. D., Clerical Association, Southampton-street, Strand.

THE BEST FOOD FOR CHILDREN AND INVALIDS.
ROBINSON'S PATENT BARLEY, for making superior barley-water in fifteen minutes, has not only obtained the Prize Medal at the Great Exhibition, 1851, but has become of general use to every class of the community, and is acknowledged to stand unrivalled as an admirably pure, nutritious, and light food for infants, children, and invalids; much approved for thickening for delicate custard-pudding, and excellent for thickening broths or soups.
ROBINSON'S PATENT GROATS form another diet universally esteemed for making a superior oatmeal gruel for infants' food, for puddings and a delicate porridge, and is much used for children and invalids, being particularly recommended by the Faculty as the purest and best preparation of the kind extant, and far preferable to the Scotch Groats.
Prepared only by the patentees, ROBINSON, BELVILLE, and Co., purveyors to the Queen at 52 and 53, Leon-street, Bethnal-green.

FUTVOYE'S PAPIER MACHE ARTICLES in every variety, consist of Tea and Hand Screens, Desks and Work Tables, Tea Trays and Caddies, Sketching and Easel Cases, &c., &c. Mr. Futvoye, being the son of the original inventor of this work, is enabled to produce specimens far surpassing any and any other Manufacturer. All descriptions of Japan Work executed to equal new.—154, Regent-street, corner of Beak-street

LEPINE, ancien HORLOGER du ROI à PARIS, having obtained judicial redress for a fraud practised by a certain party, in selling Watches bearing the solitary name of LEPINE, that WATCHES bearing his name are only genuine, if sold at his sole establishment, PLACE des VICTOIRES à PARIS.

F. HANCOCK, JEWELLER and SILVERSMITH, begs respectfully to inform the Nobility and Gentry that he has RE OPENED his premises, 39, BRUTON-STREET (which have been entirely rebuilt and fitted up in the most recherché manner), with an entirely New and Splendid Stock of Jewellery, Plate, Silver and Plated Articles, and Watches, and hopes by strict attention to merit a continuance of the same.—39, Bruton-street, Bond-street.

F. DENT, 61, Strand, and 33 and 34, Royal Exchange, CHRONOMETER MAKER and CLOCK MAKER, by appointment to the QUEEN and PRINCE ALBERT, and successor to the late F. J. Dent. In all his public visits and business at the above shops, and the Clock and Compass Factory at Somerset House, Dent, maker, Somerset House, Chronometers, Turret, and other Clocks, Diplodocuses and Patent Ship Compasses used on board her Majesty's post-captain Ladies' Gold Watches, Eight Guineas, gentlemen's, 10 Guineas. Silver Lever Watches, £4 10s.

SARL'S ARGENTINE SILVER PLATE, 17 and 18, Cornhill.—Sarl's beautiful metal continues to stand unrivalled amongst all the substitutes for Silver. Its extraordinary resemblance, combined with its brilliant appearance defies all competition. It is every year of more use since the mistake of Electro Plate was exposed by SARL and SONS to the public, and, notwithstanding the many spurious and unprincipled imitations, the present demand exceeds all former precedents; thus giving a convincing proof of its having answered the end proposed. Wrought-iron is now made an article possessing the durability and appearance of solid silver at one-sixth its cost. The magnificent stock has recently been enriched with many splendid novelties in dinner, tea, and breakfast services, and never possessed so many attractions as at the present time. The Second Edition of the Pattern-sheet includes all the various patterns that are made to suit silver. A new and enlarged Pamphlet of Services and Prices is just published, and now ready for circulation. It may be obtained gratis by applying at the manufactories.—Sarl and Sons, 17 and 18, Cornhill Cautionary.—The public are hereby cautioned that no article is genuine purchased at Sarl and Sons'. No other parties are authorised to sell it.

S. MORDAN and CO.'S MANUFACTORY of PENCILS, 23, CITY-ROAD, London.
CAUTION. PATENT EVER-POINTED PENCILS.—S. MORDAN and CO. are daily receiving complaints of the imitation of their truly useful invention, which has now been before the public above thirty years. S. M and Co. caution all purchasers that that the Patentee's name be stamped on each case, as numerous cases of counterfeits are constantly passed on the Public as genuine. 12,740 names registered. Sold by Stationers, Cutlers, &c. Manufactory, 23, City-road, London.
CEDAR PENCILS made from the Cumberland Lead, purified by Mr. Brockedon's Patent Process, by Mordan and Co., have pre-eminence in asserting that such excellent pencils in every respect are only to be obtained from the Black Lead from the Borrowdale Mine. In consequence of the Cumberland Company having disposed of the whole of their stock of pencils, and the mine being now worked by strangers, they are enabled to offer their Cedar Pencils, made from the only pure lead extant, with confidence that no inferiority will be experienced by the purchaser.
The highest encomiums have been pronounced on the Cedar Pencils by painters, draughtsmen, architects, engineers, and draughtsmen of the greatest eminence in the country, and numerous testimonials have been published in detail. The following are extracts:—
Charles Barry, Esq., R.A. ... One of Holding, Esq., P.W.S.
C. L. Eastlake, Esq., P.R.A. ... W. Wyon, Esq., R.A.
J. K. Brunel, Esq., F.R.S. ... Daniel Roberts, Esq., R.A.
C. Cockerell, Esq., R.A. ... J. T. Williams, Esq., R.A.
R. Westmacott, Jun., Esq., R.A. ... H. C. Wilson, Esq., Director, Geological Survey of Ireland.
Philip Hardwick, Esq., R.A. ... Sir Richard Westmacott, R.A.
The Cedar Pencils are stamped "Warranted Pure Cumberland Lead. S. Mordan and Co., London."
S. MORDAN and CO.'S PATENT COMBINATION LITHOGRAPHIC and COPYING PENCILS.
By this of the most simple mechanical arrangements, the Patentees have succeeded in producing a most efficient and portable Writing and Copying Machine, equally well adapted for the Counting-house, Office, or Library. With this Pencil every person may write a perfect Copying Press, so that it may be said that the latter qualification is changed by the purchaser gratis.
To be obtained from the leading Stationers in the Kingdom.

HER MAJESTY'S ROYAL LETTERS PATENT, for warmth and extraordinary improvements in the most powerful and beautiful TELESCOPIC OPERA GLASSES, RESPECTIVE RACE-COURSE, and OPERA-GLASSES, to know the distances of objects viewed through them—of great importance to the Artillery and Military Officers.—SOLOMON and SOLOMON, Opticians, 39, Albemarle-street, Piccadilly.

THE POCKET PEERAGE and BARONETAGE of GREAT BRITAIN and IRELAND, for 1854, with Genealogical and Historical Notices and all the usual Lists. By HENRY H. FORSTER of the Inner Temple, Esq.
"Of all the various editions of the Peerage which annually claim our attention, Mr. Forster's is the best, not solely by reason of the keenness of its information, but from the clear and lucid order of its arrangement."—Atlas.
DAVID BOGUE, Fleet-street.

Extracted from the DAILY NEWS of May 27th, 1854.
THE NEW RETURN of NEWSPAPER STAMPS.
From time to time, for some years past, the House of Commons has ordered the Stamp-office to place before the world an exact account of how much business each newspaper in Eng and carries on with its subscribers. If the rule should be extended to all the commercial transactions of the empire—if all the grocers, and the farmers, and the cotton spinners and stockbrokers, had to state how much business they had been able to do during the year, the information might be vastly amusing to the inquisitive world at large, but the less ingenious of the whole would become as fidgeting that the custom would quickly come to an end. Let us suppose the "Return" exacted to the shareholders or members of a certain Insurance Co. Let us imagine, for instance, a Parliamentary paper giving the sums paid as incentive bar by the different Directors, M.P.'s. What agreeable contrasts we should see, and what lively compar sons might be drawn! The Millsons, and the Brookers, and the Sib.horps, as a class, would outbalance all to nothing the John Russells, and the Wilkinsons, and the Joseph Humes. The latter may do the world's best work, and carry on its industrial or the de facto government of the country; but, in the figures against their names, they would be weighed down at once by the pretentious regis ered dead weight of the jury consultancy, just as the "Times," with its advertisement-sheet deadweight, sinks figures into mere nonsi ical and straightforward propor ories. But the seamless who open other people's books are not likely to exhibit their own. Private transactions of private business are reserved for the grave alone, and having so limited the scope of our observations they soon come to be determined not to be nice.
As we have just said, the returns of the number of stamps issued to the different newspapers must forcibly to be ordered every few years, the sequel to the present quarterly form, and the first of the new papers has just been published. Before speaking about the figures in effect, we must in justice to ourselves say that we have not personally no objection to the issue of the Returns as question—our remarks were simply intended to call attention to the reasonableness of the proposal, and the gross partiality of its present exercise. If the world is to be made a victim of the commercial secrets of one class to the community let the world also know the income of all the rest. If Journalists are to be "shown up" for the forbearance of the press and the public, in 1850, showed that the "Daily News"—then the youngest of the daily morning papers—issued 1,054,000 stamps less than it did in the year beaten its three oldest competitors. Here are the figures in proof.

	Established.	Stamps issued.
Morning Chronicle	1770	2,12,547
Morning Post	1772	1,89,000
Morning Herald	1781	1,139,000
DAILY NEWS	1846	1,154,000

This was making great headway in a short time, so hadwe that mastered some public surprise, but perhaps, also, some newspaper jealousy. Attention was particularly called to the Morning Chronicle in a pamphlet-shower—and in the columns of a local paper by the same friend of letters—as the alleged "organ of that swell, the Daily News," on which £100,000 is said to have been spent," is suffering (from the pressure of the new penny stamp). The writer, fallen into, of course, unwittingly, arose from a comparison of the stamps issued during an unequal period of costly experiment when the paper was sold at 2½d., with the present time when it is sold at 1d., and the fact that and normal position amongst its rivals, and had ranked itself with them in price also. Advantage was taken of the same fact. As in all other commercial transactions of great magnitude, an English daily paper requires more than one year, or two, or three, for the settlement of what the normal average of business may be what the terms, which the DAILY NEWS has to offer, are likely to become and more extensively, for instance, in 1851, the year of the Great Exhibition, and sold less than a period of slighter fortune or public affairs came about. Hence, to take 1851 as the basis of an argument of average circulation most unfounded. Kings sit at the head of this journal through the eight years of its existence, these inquisitorial returns have been taking their annual round, which is, that the "Daily News" has made and held a better pace than any of its rivals, and has left a lead by any other London daily paper. For drawing attention to this fact in self-defence, we must we say, refer the reader to the papers who have helped us to our present height we know that we feel most powerful.
And now, to conclude the smooth task of speaking of ourselves, we may what is the present state of the case? Another Return just issued (Parliamentary Paper, No. 298). Omitting the class paper established by Mr. Cleave for circulation in the manufacturing districts, and leaving out the "Times"—because the Return gives a false idea of the circulation of that journal—the following are the figures as they now are given; and so, to all appearance, vastly swelling the total circulation—the total, in the last Quarter stand thus.

DAILY NEWS	310,191
Morning Herald	303,000
Morning Post	203,000
Morning Chronicle	167,500
EVENING PAPERS.	
Express (the evening Daily News)	127,133
Globe	57,000
Star	50,000
Standard	103,000

These figures show an increase of Newspaper circulation in the first quarter of 1854, as compared with the last quarter of 1853, as follows.—

DAILY NEWS, increase	23,000
Morning Herald, increase	11,000
Morning Post, increase	250
Morning Chronicle, no increase; but, on the contrary, a falling-off of	13,000

Again quoting from the above observation of our private affairs on public notice, we leave the above figures of the Quarterly Return to us their own story

THE PENNY CENSUS of ENGLAND and WALES. Complete for One Penny.
5, Paternoster-row.

AN ARTIST, residing in one of the healthiest and most romantic parts of England, wishes for a PUPIL, either Boy or Girl, to educate, along with his own children, in DRAWING and ENGRAVING on WOOD.—For terms and particulars, address to Mr. H. O. Smith, 83, Hatton-garden, London.

THE CHOLERA prevented by the destruction of all noxious effluvia. CREWS'S DISINFECTING FLUID; recommended by the College of Physicians: the Cheapest and Strongest Chloride of Zinc. Quarts, 2s.; Pints, 1s.; Half-pints, 6d. Sold by all Chemists, Druggists, and Shipping Agents; and at Commercial Wharf, Mile-end, London.

NEW MUSIC, &c.

A HEALTH to the OUTWARD BOUND, a New Song, written by the Hon. Mrs. NORTON. Composed by GEORGE BARKER. Price 2s.
CHAPPELL, 50, New Bond-street.

SONG of the MOSLEM—Words by a Lady, Music by GOLDBERG—dedicated to William Gaze Starbuck, Esq., by publishers by CRAMER, BEALE, and Co., 201, Regent-street, and 67, Conduit-street. Price 2s.

THERE'S a PATH by the RIVER. E. J LODER'S celebrated Song as sung by Miss Rebecca Isaacs, and received with enthusiastic encores. To be had of Mr. Mattesdorf.
Published by HIME and ADDISON, St. Ann's square, Manchester.

OH! HAD I BUT ALADDIN'S LAMP. Composed by W. H. MONTGOMERY. Pp. "This song, doubtless, will become very popular. The melody can lay great claim to originality, and its accompaniments show a sound knowledge of, and feeling for, the art."—Plymouth Journal.
D'ALMAINE and Co., 20, Soho-square.

THOSE DISTANT BELLS; Ballad. By BRINLEY RICHARDS. Just published, beautifully illustrated, price 2s.; postage free for twenty-four stamps. This exquisite melody is also published with sacred words, entitled "What bells are those so soft and clear?"—RAMMOND, 9, New Bond-street.

JACK and the BEARSKIN—a SONG for the FLEET. By SAMUEL LOVER. This admirable Song is in the happiest vein of the popular author, and is appropriately received with thunders of applause when sung by Mr. E. L. Hime in the "Songs and Sayings" of Samuel Lover. Price 2s., postage free.
London: DUFF and HODGSON, 65, Oxford-street.

NEW SONG. THE MERRY LITTLE SPRITE. By the Composer of "Will you Love me then as now?" "A Young Lady's No," "Norah Macree," &c. Price 2s. (sent postage free). The Times says of this song, "A merry laughing Girl," by the same talented Composer.
London: DUFF and HODGSON, 65, Oxford-street.

D'ALBERT'S FAIR STAR. The last Waltz of teis popular Composer, as performed with immense success by Laurent's Band at her Majesty's last State Ball. Price 4s.
CHAPPELL, 50, New Bond-street.

D'ALBERT'S SERENADE WALTZES, just published, price 4s., elegantly illustrated by Brandard.
CHAPPELL, 50, New Bond-street.

Second Edition.
THE ROYADO WALTZES. Composed by in the Kingdom. ADDISON and HOLLIER, 210, Regent-street, London; and all Musicsellers

NEW MUSIC by H. ROSAMBERT.
EVELINE, Song. Second Edition.
The MAID of the MIST, Quadrille.
VISIONS of CHILDHOOD, Song. Poetry by Longfellow.
London: CHARLES JEFFERYS, 21, Soho-square.

JULLIEN and CO.'S MUSICAL PRESENTATION and CIRCULATING LIBRARY combined. Subscribers is this library can select their music from upwards of 500,000 separate pieces, and 3000 volumes of music. Terms of subscription, three guineas per annum. The principal feature which distinguishes this Library from all others is, that the subscribers, besides being liberally supplied on loan during the year with all standard and new musical and bonâfide compositions, are also presented with three guineas' worth of music at any trade price, which may be selected by themselves during the term of subscription. Prospectuses forwarded (free) on application to JULLIEN and Co., 214, Regent-street.

DIATONIC FLUTE.—By Royal Letters Patent. All particulars, with Testimonials of Professors, intending Mr. Richardson's Flutes, may be had gratis, forwarded free. Manufactory, 135, Fleet-street. A. SICCAMA, Patentee.

HARMONIUMS.—CRAMER, BEALE, and CO. have a great variety; and are the Agents for the NEW PATENT MODEL HARMONIUM 201, Regent-street

PIANOFORTES.—CRAMER, BEALE, and CO. have for SALE, or HIRE, a very description, New and Secondhand, for SALE or HIRE.—20, Regent-street.

HARMONIUMS, at TOLKIEN'S, 27 and 28, King William-street, London-bridge.—H. T. has a large variety in oak, mahogany, and rosewood cases, with 1, 2, 3, 5, 8, and 12 s., 2g., 3g., and 4g. stops, from 12 to 100 guineas. The model is retained at very moderate prices. An exc-lent instrument for £10 10s.

PEACHEY'S PICCOLO PIANOFORTES, first class, for SALE or HIRE, with option of purchase, warranted. An extensive assortment of every description, new and second-hand.—G. Peachey (Maker to the Queen), City of London Manufactory, 72, Bishopsgate Within, opposite the Marine Society

TOLKIEN'S COLONIAL PIANOFORTE.—This patent instrument is peculiarly adapted for extreme climates. The soundboard is prepared with a solution impervious to water and destructive to insects, also a metallic binding plate to the length of the root-plank, in which are inserted the tuning-pins, and prevents the possibility of the latter from flying out by heat or damp. These beautiful instruments are superior to any other yet made. 16s.pls. Four Sat two.—TOLKIEN, 27, 28, and 29, King-William-street, London-bridge.

TOLKIEN'S 25-GUINEA ROYAL MINUTO PIANOFORTES.—H. T., the Original Maker of a 25-Guinea Pianoforte, has, by its care, he has devised to all branch.s of the manufacture, obtained the highest reputation throughout the universe for his harmonious success, and in Durability and Delicacy of Touch, more especially for their excellency in standing in Tune in the various climates of our Colonies. They are in Elegant Cases of the choicest Rosewood, and Harmony. Packed in case and wood cases for abroad for £3 10s. extra. H. Tolkien's Old-Established Manufactory, 27, 28, and 29, King William-street, London-bridge

PIANOFORTES, 25 Guinea each,—DALMAINE and CO., 20, Soho-square, London (established 1808), submit for inspection a large and varied STOCK of their ROYAL PIANOFORTES, in mahogany and rosewood, compass 6½ octaves, at 25 guineas each, which, from the combination of elegance with economy, the high quality of the workmanship employed, and the immense care devoted to all branches of the workmanship, have obtained the highest reputation, not only in Great Britain, but throughout the whole civilised world. D'Almaine and Co. being the actual manufacturers, the greatest advantages will be found in purchasing direct from their Warehouses in London, where may be obtained grands, semi and cabinets, together with a work entitled "Observations on the Choice, Purchase, and Manufacture of Pianofortes."—London, 20, Soho-square.

HARMONIUMS at CHAPPELL'S, 50, New Bond-street.—The HARMONIUM by ALEXANDRE, of Paris, the only instrument of the kind that remains perfectly in tune, and, from the simplicity of its construction, is but slightly affected by any change of climate or weather; and is also celebrated for the Church, Chapel, School, or Drawing-room.
The following descriptions are those most liked:—
No. 1. In oak case, with expression stop, price 10 guineas.
No. 2. In mahogany or rosewood case, with expression stop, 12 gs.
No. 3. In oak case, with three stops, 16 gs.
No. 4. In oak case, with five stops, 22 gs.; in rosewood, 25 gs.
No. 5. In oak or rosewood case, with eight stops, 32 gs.
No. 6. In oak or rosewood case, with twelve stops, 35 gs.
No. 10. In mahogany or rosewood case, with the patent percussion action, and one stop, 15 gs.
No. 11. In oak case, with percussion and twelve stops, 40 gs.
No. 9. Ditto, in elegant rosewood cases, 45 gs.
No. 10. One New Model Harmonium, with expression & la Main. The most perfect Harmonium that can be made, 15 stops, elegant rosewood case, 55 gs.
Full descriptive Lists sent on application. 50, New Bond-street.

MUSICAL BOX DEPOT, 54, Cornhill, London, for the sale of SWISS MUSICAL INSTRUMENTS, made by the celebrated makers, NICOLE, FRERES, of Geneva. Large cases, four airs, 14 inches long, £4; six airs, 18 inches long, £6 6s.; eight airs, 20 inches long, £8; and twelve airs, 30 inches long, £13 13s.; containing selections from the most eminent composers, including popular, sactional, and opera airs, together with hymns, &c. N. Y. C.—Quite correct.

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes in the County of Middlesex, by WILLIAM LOVELL, 198, Strand, aforesaid.—SATURDAY, JUNE 10, 1854.

THE ILLUSTRATED LONDON NEWS

No. 688.—VOL. XXIV.] SATURDAY, JUNE 17, 1854. [WITH A SUPPLEMENT, SIXPENCE.

PROGRESS OF THE WAR AND THE ANTI-RUSSIAN ALLIANCE.

EVIDENTLY the plot thickens. Although events do not march quite so rapidly as to satisfy those who expect a great battle every week, and a naval or military victory every second day, the war gradually assumes large dimensions. To such persons as the King of Prussia, the contest that seems slow to the fiery-hearted critics of London and Paris, may appear endued with unnatural and inconvenient celerity. But whether people are patient or impatient, events take their own course. The great machine is in motion, and rolls by its own weight and the impetus which it has received. Among the remarkable—and, as they may hereafter prove, the important—events of the last few days, three are more especially deserving of mention:—First, the attempt of some of the minor Kings and Princes of Germany to serve the cause of Russia by a very unnecessary "Memorandum" or their opinions on the subject; second, the unexpected interview that has taken place between the Emperor of Austria and the King of Prussia at Tetschen; and, lastly, the still more unexpected transference of the Russian head-quarters from Bucharest, in Wallachia, to Jassy, in Moldavia.

The Bamberg Memorandum was drawn up at the town or that name—a name which is but too suggestive, to those who use the forcible English vernacular word, "Humbug!" of the true character of the document to which it has given birth. The parties who assembled or were represented on the occasion were the Kings of Bavaria and Saxony, and various Princelings and Dukelings of lesser note, who took it upon themselves, after the fashion of the celebrated and historical tailors of Tooley-street, to speak in the name of the great German people, and to recommend the Governments of Austria and Prussia to be "more deferential in their tone towards the Czar." In the estimation of these minnows among the Tritons, the demand made by the great German Powers for the evacuation of the Danubian Principalities on a day to be named by the aggressor, ought to have been accompanied by a demand for the simultaneous evacuation of the Black Sea by the Allied fleets of England and France. The force of impudence could scarcely have gone further. Such a document and such a recommendation are of course utterly worthless; but, as they probably owe their existence to the promptings of Russia, they are not without interest in showing on what terms the Czar would be happy to escape from the dilemma into which he has thrust himself. Irrespective of this consideration, the manner in which the "Memorandum" has been received in Germany ought to be a lesson to the small Sovereigns who were parties to it. It is not only the Austrians and Prussians who hold the impertinence in scorn, but their own subjects, who object that the name of Germans should be brought into disrepute by such presumptuous folly. Prussia and

"THE FIRST SHOT IN THE BALTIC."—H.M. SHIPS "ARROGANT" AND HECLA" ATTACKING ECKNESS, RUSSIAN FINLAND.—(SEE NEXT PAGE.)

Austria may justly claim to represent Germany on this question; and where they lead the *roitelets* must follow. There was a time when, in the Russianised Courts of the smaller States of Germany, the very name of Nicholas was a watchword of security; but those days have gone by. The Kings of Saxony and Bavaria may preserve some portion of their ancient veneration for a Sovereign whom they believed to be not only all-powerful, but all-wise, and the best bulwark of European stability; but keener-sighted men have opened their eyes to the truth, and found that the golden image was but a calf at the best. Many who thought Nicholas almost a demigod a few months ago, now consider him a dangerous lunatic. Diplomatists and courtiers have lost faith in his power and reverence for his character at the same time. They see that he is encompassed and hemmed in by perils, that, turn which way he will, he may confront a declared enemy, or appeal in vain to a lukewarm and vacillating friend. When he was believed to be invincible, Europe swarmed with his admirers and defenders; but since it has been made patent to the whole world that his best armies and generals are not a match for the Turks alone—to say nothing of the Allies—his apologists and supporters have dropped off like May-blossoms in a frosty night. The Bamberg Memorandum has been scouted by this class of persons with even more contempt than by the rest of Germany; and the small Kings have taken nothing by their movement but a well-deserved snubbing from their more powerful brethren, and a loss of character among their own people.

The results of the personal interview between the Sovereigns of Austria and Prussia will show themselves in deeds, not in words. What passed between them will, perhaps, never be recorded; but it has been permitted to the statesmen, as well as the journalists, of both countries, and of all Germany, to know that there is agreement of policy between the two; and that Prussia not only supports the demand made by Austria for the evacuation of the Principalities, but agrees that the Czar's refusal shall be considered a *casus belli*. The adherence of Prussia, willing or unwilling, must therefore be considered as no longer doubtful. The policy of the minor German Powers, and especially of the egregious framers of the *Bamberg* Memorandum, was as the telegraphic wires of Vienna inform us, the topic of discussion. What opinion was passed upon the subject by the two Sovereigns may be easily imagined.

The sincerity of Austria and Prussia, in their opposition to the Emperor Nicholas, is doubted. Collusion, and a secret treaty with the Czar, are spoken of, as a possible key to the policy of Central Europe; but we must confess our disbelief in any such interpretation. It is not that we entertain a very high opinion of the good faith of the King of Prussia, or even of that of the Emperor of Austria, but because it is the plain and obvious interest of Germany, and of those two great States in particular, to restrain, *per fas aut nefas*, the ambition of Russia, that we do not suspect them of double dealing. But the reply of the Czar to the Vienna note will test the sincerity of both. The reply, when it comes, will be the next great point in the history of the struggle. If the Czar yield to the gentle coercion, and if one or both of those Powers should thereupon think proper to oppose the further prosecution of the war, there will be more than sufficient determination and strength in Great Britain and France, as well as in Turkey, to carry it on to its legitimate conclusion, without asking either for advice or for co-operation from Germany. If, however—as is most likely to be the case—the Czar should persist in his evil courses—lest his humiliation and stultification, before the eyes of all Europe, should lead to his deposition by his Court and nobility, it not to an issue more deplorable to his family—the German Powers will have no resource but to carry out the principle to which they have pledged themselves. In the most favourable case for the Czar, they must aid in restraining him. In the other and more likely one, they must aid in punishing him. If those Sovereigns were as wise as the people whom they govern, they would see that the aggrandisement of Russia, injurious to all Europe, is more injurious to Germany than to any of her neighbours; and they would support Great Britain and France, even more cordially, in the attempt to exact "material," and amply sufficient guarantees for the future good behaviour of the Czar, than they do in the attempt to back him out of his quarrel. But they are, perhaps, wise enough to be aware of all this. At all events, their present policy leads them strongly in that direction.

The explanation of the recent movements of Prince Paskewitsch upon Jassy remains a mystery. Whether it be that the repeated failures of the attacks upon Silistria, combined with the march of the British and French army to the relief of that fortress, and the simultaneous concentration of upwards of 100,000 Austrians upon the frontiers of Bessarabia, have led to this change in his tactics; or whether it be a step preparatory to the more resolute defence of the Crimea, or to the evacuation of the Turkish territories, it is impossible to state. It would, however, be instructive to find that, after a twelvemonth of bombast and bravado, the Russians had been compelled, by the fear of ignominious defeat at the hands of the enemy whom they affect to despise, to make a retrograde movement, and maintain themselves on the defensive. But the reasons of the movement are as yet inexplicable, for it will leave the forces before Silistria, and those in the Dobrudja, without the support which will be necessary to effect the capture of that fortress, or to maintain a position in Bulgaria. The Russian forces in the Danubian Principalities never, is now appears, exceeded 150,000 men. The Turks have 100,000 men under Omer Pacha and in the fortresses that guard the approaches to the Balkan. The Western Allies will, in a few days, have 50,000 of the finest troops in the world in full co-operation with the Ottoman commander; so that, leaving the menacing armaments of Austria out of the question, the Russians are fully matched. When we consider that the Black Sea fleet is utterly useless to them, and that the Allies command it for the support of military operations either in Europe or in Asia, and that St. Petersburg is effectually blockaded, the condition of the Czar and his fortunes seem so pitiable, as to give to his continuance in the war the character of hopeless fatuity, or rampant insanity.

PIRACY IN THE TURKISH WATERS.—The British schooner *Sarah*, of 160 tons, from Trieste to Latzina, when between the latter port and Tyenne, was attacked by two piratical Greek boats, and was plundered of her provisions and some money.

REVEL, IN THE GULF OF FINLAND.

THE *trafed* from Helsingfors is short; and in fine weather both the Finnish and Esthonian coasts may be seen from mid-channel.

The first buildings recorded as occupying the site of Revel were erected by Eric XIV., King of Denmark; but it was not until 1219 that Waldemar II., of Denmark, pulled down the fortress, and set about erecting a regular town. It soon became of sufficient importance to be quarrelled for by the Danes, the Swedes, the Livonian Knights, and even by the Pope himself; and it was formerly the great emporium of the Hanseatic League for the trade with Novogorod. In 1700 Revel was taken from the Swedes by the Russians.

Revel, says the author of the lively "Letters from the Baltic," is divided into two parts, the upper and lower town; the former, perched on the top of a rocky eminence, about a mile in circumference, encloses within its old Gothic walls the Dom, the castle, with the residence of the governor, the commandant's house, the gymnasium, and the houses of the nobility.

Revel has an arsenal; and the fleet from Cronstadt rendezvous here at times. In the harbour there is generally some Russian vessel of war—the hymn of the Russian sailors, which may be heard nightly at sunset, is not remarkably harmonious. The club of the nobility and *somata* contain some handsome apartments, and a collection of portraits of Swedish sovereigns, arms, and relics of remarkable persons. The English, French, and German newspapers are taken in here, and a stranger may readily procure admittance. At Revel is the mausoleum of Admiral Greig, the hero of Tschesme, who was buried here with great pomp in 1788.

The View of Revel upon the preceding page, from a Sketch by a Correspondent, shows that portion which is distinguished as the Inner Fort.

THE ATTACK ON ECKNESS.

THIS "gallant cutting-out affair" was minutely detailed in our Journal of last week, and illustrated with the official plan of attack. We now engrave the actual scene of this "frisking of the war," sketched by Lieut. Browne, of H.M.S. *Hecla*, showing the two ships in the narrow river, with well-wooded banks; just at the point of their coming with range of the enemy's battery. (See the several accounts at pp. 559 and 560 of the ILLUSTRATED LONDON NEWS of last week.)

THE WAR ON THE DANUBE.

(From our Special Correspondent.)

CONSTANTINOPLE, May 30, 1854.

THE Turks have again had the good fortune to worst the Russians before Silistria. On the 11th inst. the enemy endeavoured to force the passage of the Danube from the large island below the town, where he had already built a bridge communicating with the Wallachian side; but he failed in accomplishing his object. It was not till the 16th that he succeeded in crossing over a bridge of boats, which cost some sacrifices to lay down. Over this bridge the Russians passed to the number of 20,000, which, joined to 20,000 more who had advanced from Rassova, made a force of 40,000 men, with which two assaults were made, on the 16th and 21st, against the fort called Arab Tabejasi. This fort is an outwork of considerable extent, situated at 2500 yards from the place, and defends a line of about 500 yards of the inner enceinte. The assaults of the Russians were on both occasions unsuccessful; and, on the 21st, Moussa Pacha made a sortie with a body of infantry and cavalry, which swept the approaches of the enemy, killed 300 men, and wounded many more. The Russians are commanded by Prince Paskiewitsch and the Grand Duke Constantine. They have not hitherto attacked Silistria on the Fontracan side, and the communications are therefore still open with Schumla in that direction.

The combined fleets, in the meanwhile, have been lying almost inactive at Kavarna. Anapa, which is the only point still held by the Russians, on the coast of the Black Sea, was visited by Admiral Lyons on the 19th; and the whole of the Circassian coast has been examined, and arms and ammunition distributed to the people there, who have been masters of the country since the evacuation of the Russians. We shall shortly hear of Anapa being attacked by the combined fleets.

The agitation caused in the Bosphorus by the movements of our troops has given another aspect to Constantinople. The Golden Horn is filled not only with traders of the various nations which hold intercourse with Turkey, but with the largest and fastest steamers and transports of the English navy. Those masterpieces of naval architecture which have been produced by the necessity of lessening the distance between England, America, India, Australia, and the West Indies, are lying at the mouth of the Sea of Marmora, basking in the burning sun of Scutari, and waiting for freights of human beings to take to the Black Sea. In the midst of the fine-bowed clipper transport, the razor-billed screw, and graceful paddle steamer of fast constructions, are the antiquated forms of those old fixtures the *Megara* and *Simoom*. The *Victoria*, sitting on the water is like a sword-fish by the side of the *Megara*. The Turks, however, seem little curious of these contrasts, and they leave alike unobserved the graceful beauties of the one and the heavy blemishes of the other. They wander, as usual, into St. Sophia and the Sultanieh, say their prayers, and put their trust in Allah. I had heard it said that there was danger in visiting St. Sophia during the holy festival of Rhamazan; and Mr. Theophile Gauthier says, in his admirable "Letters on Constantinople," that he postponed his visit to that celebrated mosque until Bairam, for fear of offending the faithful. Whether it be owing to the presence of so many Europeans in Stamboul, or whether the Turks are really less prejudiced than it was said they were, I found no difficulty in visiting this splendid edifice, and thus witnessing it in its gala attire. I need make no apology for entering into a description of the scene, as I believe that St. Sophia has another aspect on festive days from that which strikes one on ordinary occasions. It is no longer a vast and resounding space, in the midst of which some straggling forms are to be descried kneeling at their prayers, or chanting in a corner. The place was crowded with people of many climes: the official Turk, with his fez and frock-coat; the old Musulman, with his turban and flowing gown; the Persian, with his fur bonnet out like a turner's chisel; the Circassian, with his pistol and cartouches, which hang like pan-pipes on his breast. Women, white and brown and black, were congregated in the place; whilst some were to be met in corners chanting forth the ceremonial prayers, others making genuflexions, and numbers washing in the fountains. Most were seated on their hams, or stood around a space, where a finely-turbaned person, rested behind a board and talked aloud, exhorting, teaching, and influencing by his eloquence his numerous audience. The unfortunate Turk who keeps the Rhamasan, and therefore must abstain from drink, and food, and smoke, during a space of hours which extends from sunrise to sunset, is fed substantially with sermons during the period of his fast. Whether these sermons were of the fanatic kind or not, I am unable to say, as it was impossible to understand a word of what the eloquence consisted: but the public around seemed to be considerably edified and pleased, as much by the words which escaped the speaker as by the gesticulation which he made, and the noise he created by slapping his hands upon his desk to enforce the argument. The preaching was not, however, confined to one man, but there were several in various parts of the Mosque, all equally busy in gesticulation, but surrounded by much smaller audiences than the first. It was strange, in the midst of the decorous Turks who satlistening and telling beads, to watch the children rushing amongst the groups, playing unconsciously at hide-and-seek behind the pulpits; and this reflection naturally followed—how do such boisterous children make such staid and fatalistic men? This problem might be solved here without difficulty, but would, perhaps, be tedious to the reader. Deeply altered as is St. Sophia since it fell into the hands of the Musulmans, it will never be anything but a Christian temple. The forms of the old mosaics, St. Sophia in gigantic stature, the Four Evangelists, whose faces are concealed under large roses of gilding; the Greek crosses, which meet the eye beneath the florid ornament which the Turks have painted there; all this, as well as the bloody hand of Mahomet II. imprinted on the marble column, twelve feet above the ground, reminds one of the Christian worship put down for centuries by Mahometan conquest.

The silence and repose in which the streets of Stamboul are plunged during the days of the Rhamazan are the natural consequence of the system which turns night into day. It is difficult, indeed, to comprehend in what the privation of the Musulman consists, even though he be a man of the strictest caste. He sleeps the greater part of the day, and takes his meals at night. At sunset, therefore, the shops, which have been closed since sunrise, begin to open; the cafés are cleaned out and made ready; the peripatetic vendors of sweets, of drinks, and tobacco, prepare for themselves a convenient place; and, when the solitary gun has fired which announces the close of day, the faithful rush out of their houses, take their preliminary pipe and raki, and fall to at—I was about to say—breakfast. The cafés are filled with people, the mosques are illuminated internally by little oil-glasses, fastened to wooden lustres that drop from the ceilings; the minarets are encircled by brackets of light. The cords which hang between the steeples are strung with lamps, which swing gracefully in the air, and simulate favourite verses of the Koran. The crowds wave to and fro, and the Bosphorus and Golden Horn reflect as much as they can the glitter of the illuminations. But, after all, a night of Rhamazan is not the brilliant affair of which I had heard so much. We have done much more with light, in imitation of the East, than the Easterns ever have. The illuminations are not on so large a scale as to render a lantern in the street an unnecessary precaution; and those who have written enthusiastically on this, as on most other Oriental subjects, have committed in a greater or less degree the offence which is now designated by the French as *la blaque de l'Orient*.

It appears that yesterday a slight change took place in the Ministry here. It is of little moment, I believe. The Ministry is still of the *mumee* Redschid, but perhaps more inclined than heretofore in the English direction. The Grand Vizier Moustapha Pacha is succeeded by the Rapudan Pacha, Mehemet Kebresli; and the post of High Admiral is given to Kalil Pacha. The pretext for the change is I am told, the conduct of the Grand Vizier in the affair of the Catholic Greeks, as raised by General Baraguay d'Hilliers.

(From our Special Correspondent.)

SCHUMLA, May 22, 1854.

The visit of the English and French Generals and other distinguished strangers here has excited a great deal of interest.

On Saturday intelligence reached us that Omer Pacha, accompanied by them, would arrive here about three or four o'clock. A considerable number of troops was drawn up on that part of the plain, close to the Varna road. The Pachas, mounted on very fine horses, and followed by their respective suites, joined them. The unusual number of officers of distinction, in comparison of men, who were there, threw a degree of brilliancy on the Ottoman army, which at other times, from the small proportion of stylish officers, has rather a tame appearance. After waiting for several hours, the most terrific storm of thunder and lightning that has been known here for many months, came on, accompanied with heavy torrents of rain. The troops had no shelter, and bore this outburst of the elements with patience. Ismael Pacha, with a view of ascertaining if the party was likely to come up, rode for several miles along the Varna road, and then ascended a height, that gave a very extensive view of the country all around. After remaining there for some time, and looking in vain in every direction, he returned to the troops. Before receiving, however, to give up hope of seeing the military chiefs, the commander of the troops waited for nearly another hour; and, there being no sign of their approaching, the troops were ordered to their quarters.

The plain—which, in summer, is nearly as dry as the flooring of a room—became, at the close of the day, like a lake or marsh. The foot soldiers must have encountered considerable difficulty in reaching their tents; for even those on horseback were put to inconvenience in crossing the streams of water that found their way in to the hollows and roads.

The fierceness of the storm effectually stopped the progress of the party from Varna. All the great men were thrown into a sad plight. A deserted village was the only place they could get shelter in; there, however, neither food nor beds could be procured, and the whole night was spent in a most comfortless manner. A start was made early in the morning, and about nine o'clock the military chiefs and their attendants reached the plain, where they found the troops drawn up in the same manner as on the previous day. A number of movements were performed by the different regiments, to the satisfaction of the English and French Generals. Marshal St. Arnaud then addressed the officers in the style in which Napoleon was in the habit of speaking to his soldiers. The words were interpreted by a Dragoman, who having never been placed in a situation so marked and public, shook with emotion, and his voice had a faltering and indistinct sound. Breakfast to the illustrious party, in one tent, and to the Pachas in another, wound up the business of the morning. Four roasted lambs were among the eatables, and that part of the fare was certainly enough to prevent any reflections being made on the hospitality of the distinguished individual who furnished the repast. Worn out with fatigue, Omer Pacha and his guests betook themselves to their apartments. Lord Raglan, having rested for some hours, mounted a horse, and accompanied by his Aides-de-Camp and General Cannon, and Captains Simmonds and Gavoni, rode along the heights, from which he had a view of the fortifications. He was surprised that such extensive works should have been made to defend a place which was not in itself of much importance, nor commanded any great road or pass.

Yesterday morning the illustrious visitors departed, at four o'clock; and as they passed through the plain there was another turn-out of Pachas and troops. After the party had reached the end of the line, they all dismounted, and the Pachas, having been formed into a circle, were addressed by Marshal St. Arnaud and Lord Raglan, who took up their position in the middle of it. We believe that the foreign Generals were agreeably surprised at the good appearance of the Turkish troops, and at their knowledge of military evolutions.

THE ALLIED TROOPS AT VARNA.

Step by step the Allied forces are drawing nearer to the scene of war. Last week we announced the departure of the French and English troops from Gallipoli and Scutari; and the last mail from the Black Sea brings word of their arrival at Varna. On the 25th ult. 500 French soldiers, including a company of Zouaves, disembarked, and on the following day a company of the Royal Sappers and Miners joined them. The excitement caused by these arrivals appears to have been much greater than was produced at Scutari. The Zouaves especially, with their Turkish dress, have astonished the natives.

Soon after landing (says a Varna correspondent) one of these gentry, whose capabilities of absorption of liquid appears to be very great, rolled into the middle of a crowd of lookers-on in the streets, in an exceedingly happy state, rattling a French song at the top of his voice; and, catching sight of an old Turk near him, he shouted to him at the top of his voice, "Les Russes, eh?—plouf!" and delivered a blow at an imaginary Muscovite, to the extreme astonishment of the old gentleman, and to the immense amusement of the spectators. The Turkish soldiers were evidently well pleased at the arrival of the Allies. They lent them a hand as they got out of the boat to step on to the pier, and fraternised afterwards in many ways. A sentry goes through his manual and platoon exercises for the amusement of a Zouave, who, in return, shows him how he performs those evolutions. A conversation of signs goes on between a long French *sapeur* and a Turkish soldier, who afterwards start off together to a baker's or a wine shop. The vivandiere, with her glazed hat, bound with tricoloured ribbon, stuck coquettishly on the side of her head, her tunic showing a very pretty *taille*, and her pantaloons, with the double red stripe, was the most astonishing sight to the Turks, soldiers and civilians. An Arab soldier, with a face as black as ebony, and glisten-

ing as a piece of sea-coal, walked up towards her, grinning until she could see every one of his supernaturally white teeth. She appeared to join in the black man's hilarity, though unable to see the point of it.

Sir George Brown and staff arrived at Varna on the 29th. The division is to be encamped at Devna, about eighteen miles on the road to Schumla, to which place the Royal Sappers and Miners had been sent forward. The 77th and 33rd regiments disembarked on the 31st; as did also a troop of Horse Artillery. The 4th Hussars were in one of the transports in Varna Bay; but had not yet landed.

As we stated last week, the chief portion of the French troops have been sent by land. A letter from Adrianople, of the 29th ult., states that a dozen superior officers and attendants had been there for two weeks making preparations for the comfortable reception of the men, who were to have been quartered there for some time. Owing to the arrangements made with Omer Pacha, however, they will, no doubt, march forward to Schumla.

RETREAT OF THE RUSSIAN ARMY.

The most important piece of news from the Danube is the removal of the Russian head-quarters from Kalarasch to Jassy, it being looked on as a convincing proof that Prince Paskiewitsch deems it necessary to keep in watchful eye on the movements of the Austrian army in Transylvania. Several regiments, which were advancing by forced marches to the Danube, have received orders to halt in Moldavia. The Transylvanian frontier is said to be swarming with Cossacks. Prince Gortschakoff is to retain the chief command of the troops on the right bank of the Danube. The Wallachian correspondent of the *Vienna Medical Journal*, writing on the 1st of June, gives a deplorable picture of the Russian army in the Dobrudja. "Their embarrassment," he says, "increases from hour to hour. All the purposes are continually removed, deceived, attacked, and taken unawares by the Turkish Irregulars, who receive all possible assistance from the malevolent inhabitants of the country." And these "inhabitants" are the very people who were to rise at once against the Sultan's authority, as soon as the Russians made their appearance!

THE SIEGE OF SILISTRIA.

Up to the 8th inst., the besieging army had achieved no important advance. No detailed account has yet arrived of what took place before Silistria later than the 24th ult., but the tenor of all the despatches is highly encouraging. An experienced European staff officer, writing from Schumla, on the 26th ult., says, "The Russians seem to be exclusively occupied with the siege of Silistria. . . . The garrison has displayed the greatest bravery, and is worthy of the admiration of Europe. It is daily gaining confidence in its own powers of resistance, and there is every reason to believe that it will offer an example as memorable as that of Ibrahim, and other Turkish places in the preceding wars." The loss of the Russians is said to have been enormous, although they still maintain their usual favourable style of reports. In one instance alone, on the 17th May, which they describe in a St. Petersburg bulletin, they actually admit having lost two men, but then they add that the Turks lost sixty.

The report that Omer Pacha intended to advance to the relief of Silistria is now contradicted. An attempt was made, according to one account, to send a "flying convoy" of provisions to the garrison; but the Cossacks had been scattered all over the country in such numbers that the convoy was forced to return to Schumla. Omer Pacha's army, which has recently been reinforced by 26,000 regular troops from Widdin, is now estimated at 106,000 infantry, 14,000 cavalry, and 140 guns.

Devna, where the English division, under Sir George Brown, has encamped, is about half-way between Varna and Schumla.

A BRILLIANT TURKISH VICTORY.

One of the most complete defeats which the Russians have sustained during the present campaign on the Danube, took place on the 26th ult., in the neighbourhood of Karakal, in Lower Wallachia. An Englishman, who was present, and who writes from the "Headquarters of the Army of Wallachia, Krajova, June 1," gives the following animated description of the affair, in which the bravery of the Turks seems to have surpassed anything which has yet happened since the war began:—

Our regiments of cavalry, of whom three were regulars, and one of our old friends the Bashi-bozouks, left Krajova, our head-quarters, on the morning of the 24th ult., and moved on Slatina, on the Aluta, where, as we were informed, the Russians were concentrated. On the morning of the 26th ult. we perceived in large force at Slatina. There was only an unimportant skirmish. They moved on Karakal, while the Turks followed on foot; and on the 30th May, exactly at noon, the affair began. We had, as I have already told you, four regiments of cavalry, about 2000 horses, and no cannon; while the Russians had four regular regiments—viz., the 1st and 10th Hussers, the 9th Lancers, and the 2nd Dragoons, six pieces of artillery, and 500 Cossacks. Owing to the admirable tactics of Omer Pacha and Skender Beg, this force was soundly thrashed before four o'clock. The numbers and results, as given officially, are 1000 Russians killed during the whole affair, but the most reliable accounts state 3000 horses brought to Krajova, the same number left dead at Karakal; more than 1000 muskets, lances, sabres, uniforms, equipments of all sorts and sizes, carriages full of baggage; 15 prisoners; and what, after all, is the best of the thing, and does not often happen in warfare, the six pieces of cannon, all with perfect harness, with their carriages, *caissons*, &c., *au grand complet*, all captured by an infantry force without guns, and defeated by us in triumph to Karakal. After beating the Russians handsomely, we pursued them as far as the Aluta, where a good number were drowned. The colonel of the 10th Russars, the Major of the same regiment, and more than ten other officers, were killed. The whole of the Russian artillerymen, without exception, were killed at their guns.

Yesterday morning a courier, who had been sent for the purpose from Karakal, conveyed the news of our victory to Krajova, and the return of our column with all its trophies. In an instant the whole of the army mounted on horseback, and came out to meet us, with a band of music at their head, and uttering shouts of joy. All Krajova met us. All the trophies were there. The prisoners marched first. The six guns above all produced a prodigious effect. They are the first that our corps has taken during a campaign in which it has invariably been victorious. The Turks were in the greatest enthusiasm—and, indeed, they had good reason to be so. Last night Krajova was illuminated. A courier has been sent to Omer Pacha. The guns are in the square of the town, and will remain with our corps *d'armée* during the whole of the campaign. The Turks have lost 100 killed and 200 wounded, as a result of the affair will doubtless be to give us definitive possession of the Aluta; and we shall take up position at Slatina and Karakal. The Russians are in full retreat on Bucharest.

THE BLACK SEA FLEETS.—CIRCASSIA.

Voluminous despatches have been received from the Allied fleets within the last few days, announcing the blockade of the Danube, and giving a detailed account of the proceedings of the squadron which was sent to co-operate with the Circassians along the coast. These despatches amply confirm the accounts previously received regarding the complete discomfiture of the Russians in Circassia. The native chiefs with whom Admiral Lyons communicated declared that they only waited for an order from the English and French, to rise and march against the Russians. As a proof of good-will, Admiral Lyons caused 15,000 ball cartridges, which had been captured from the enemy, to be given to the Circassians—9000 in the name of the English, and 9000 in the name of the French; and 1000 additional were given from the *Caradoc*. From Soukoum Kaleh, a pretty and wealthy town, the Russians, although 3000 or 4000 strong, had retreated in such haste that they had been unable to destroy the whole of the ammunition and stores. About thirty cannon were left in the fort, a portion of which only were spiked; and, along with these, the Allied troops found several thousand balls and shells, a quantity of grape shot, and between 700 and 800 tons of coal. Redout Kaleh was in the hands of the Russians when the squadron made its appearance before the town; but they soon fled, after having set fire to their stores, and destroyed a bridge of boats to prevent pursuit. The two establishments of Soukoum Kaleh and Redout Kaleh were the forts from which the Russians supplied their army in Asia, which must now be greatly at a loss for stores and ammunition. Soukoum and Souk Jouk Bay are the only points retained by the Russians; their garrisons in them have even been augmented, and now form an effective force of 30,000 men. This concentration is not far from the Straits of the Kertch, as is thought by Admiral Hamelin to indicate that the enemy intends to defend the peninsula of Taman, wh ch commands that Strait.

A letter from the Crimea, of the 22nd ult., announces that an officer attached to the staff of the Russian general commanding at Odessa had just arrived at Sebastopol to demand reinforcements. At that date Tiflis was regarded as in great danger from the Circassians. Sebastopol will have enough to do at home without sending aid to Tiflis.

THE CONFERENCE AT TETSCHEN.

The result of the Conference at Tetschen, between the Emperor of Austria and the King of Prussia, on Friday last, is said to have been highly satisfactory. Three grand points have been gained, we are told, favourable to the cause of Europe:—the Czar; viz.:—Austria and Prussia have drawn up a note, to be remitted to the minor States lately assembled at Bamberg, to the effect that any and every state is at liberty to join the Austro-Prussian Treaty; but that neither the treaty itself, nor the accession of any Power, will be made subjects of any debate at the Bund. Secondly, Prussia has thrown no difficulties in the way of the regular and consistent execution of the late treaty. Thirdly, Prussia consents to take the note issued by Austria on the first day of this month as the *summation* provided for in the treaty, and will back it by a special mission, which is to be entrusted to Count Manteuffel.

A despatch from Vienna, of Wednesday, says:—"It is not doubted that Russia has rejected the Austrian summons." If that be true, Count Manteuffel may as well remain at Berlin.

THE BALTIC FLEET.

A despatch from Copenhagen, of Tuesday last, gives a rumour that some English vessels, off Brahestad, in Finland, had demanded the gunboats building there, and, on the being refused, had destroyed the gunboats and a large number of merchant-ships, fired the wharf, on which were 10,000 barrels of tar, and destroyed altogether 200,000 silver roubles' worth of property. A telegraphic message from Hamburg, of Monday, states, on the authority of a Swedish journal, that "Admiral Napier was in the Bay of Svesborg. From the lighthouse, ten sail of the Russian fleet had been seen, sheltered behind the fortifications. Admiral Corry, with his division, was off Hango Head."

The following despatch gives a different version of the affair:—

LUBECK, Wednesday.

Admiral Plumridge has been punishing the Russians. He has destroyed their dockyards at Ulcaborg and Brahestad, burning 10,000 barrels of tar at one place, and 18,000 at another. He has also taken several of the gun-boats which had been prepared to oppose the English fleet. Ulcaborg and Brahestad are not far distant from each other in Finland, on the upper part of the Gulf of Bothnia. Ulcaborg is, next to Abo, the chief commercial town of Finland.

The screw line-of-battle ships, consisting of the *Duke of Wellington* 131, bearing the flag of Vice-Admiral Sir Charles Napier, Commander-in-Chief; *Edinburgh*, 58, flag-ship of Rear-Admiral Chads; *St. Jean d'Acre*, 101; *Auxerlitz*, 100; *Princess Royal*, 91; *Cæsar*, 91; *Cressy*, 80; *Blenheim*, 60; *Hogue*, 60; paddle steam-frigate *Penelope*, 16; and a few smaller steamers, remained at anchor in Ruggen Roads, Finland, for a longer period than was intended, in consequence of the prevalence of dense fogs at frequent intervals. The navigation of the Gulf of Finland under the most favourable state of the weather is attended with difficulty, especially for ships of great draught of water. At the present time it is rendered more hazardous from the fact of the Russians having removed the various buoys and beacons which denoted the usual channels. As an instance of one of the impediments which the enemy has thrown in the way of the safe progress of the fleet up the Gulf of Finland, it may be cited that the lighthouse on the island of Hango, which is situate at the north western entrance of the Gulf, has been pulled down, and the usual marks for vessels entering the roadsteads have been removed. Throughout the whole length of the Gulf similar proceedings have been adopted by the enemy, but these will not have the effect intended. By sending in advance two or three small steamers, to take soundings and bearings, the large ships will be able to shape a safe course to Sveaborg, and thence to the vicinity of Cronstadt.

Up to the latest dates no further bombardment of the forts commanding Hango Udd had taken place. Their speedy destruction would have been easily effected, but attended with very little advantage. The fortresses of Sveaborg mount 800 guns of large calibre, one-half of which, it is stated, could be brought to bear on any ships attempting to pass through the narrow channel to the harbour of Helsingfors. In the garrison are several thousand artillerymen, so that

INSPECTION OF BRITISH TROOPS, ON HER MAJESTY'S BIRTHDAY, AT SCUTARI.

the line of the Danube, this can hardly take place during the present campaign, which will be closed by the second or third week in November. The Allies, once in the field, will be sadly puzzled by their want of cavalry, and their communications will be very difficult to keep up.

Lord Lucan and Lord Cardigan, with some artillery and detachments of the 8th Hussars (under Major de Salis), and 17th Lancers (under Colonel Lawrensen) were quartered in a small village on the left bank of the Bosphorus, and about four miles from Scutari. The horses were in admirable condition, and but a very inconsiderable number had been lost during a prolonged and tedious voyage.

The French had collected two regiments of cavalry at Gallipoli, and these, together with the English division encamped in the neighbourhood, were reviewed by Marshal St. Arnaud on the morning of the 31st ult. The whole of the troops were in magnificent order; and the French General frequently expressed his admiration at their soldier-like appearance.

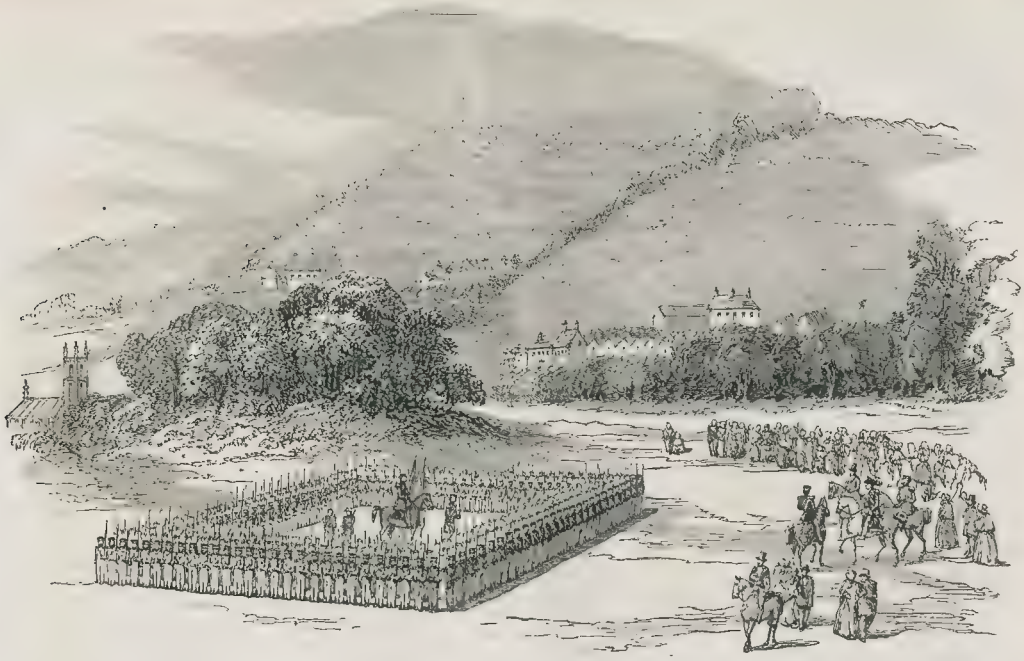
HER MAJESTY'S BIRTHDAY AT SCUTARI.

At a quarter to eleven o'clock all the regiments in barrack and camp were paraded separately, and afterwards marched to the ridge which bounds one side of the shallow but broad ravine which separated the camp of the brigade of Guards from the camp of the other brigades. The regiments then on the ground were the 3rd battalion Grenadier Guards, 1st battalion Coldstream Guards, 1st battalion Scots Fusilier Guards, 7th Fusiliers, 19th Foot, 23rd Welsh Fusiliers, 30th Foot, 33rd (Duke of Wellington's) Regiment, 41st (Prince of Wales') Regiment, 47th Foot, 49th Foot, 55th Foot, 77th Foot, 88th Connaught Rangers, 93rd Highlanders, 95th Foot, and the Rifle Brigade first battalion, and a battery of six pieces of artillery. The total force on the ground consisted of about 15,000 men; and, for weight, stature, and strength, could not be matched, probably, by a similar body of any troops in Europe.

The brigade of Guards, crossing the hollow, took up their position in columns of companies on the crest of the hill on the right flank, then came the 93rd (the 42nd and 79th regiments are still wanting of this brigade), completing the Duke of Cambridge's division. Sir De L. Evans' division, consisting of the 30th Foot, 41st Foot, 47th Foot, 49th Foot, 55th Foot, and 95th Foot, was formed next on their left; and Sir G. Brown's (the light) division, composed of the 7th Fusiliers, the 23rd Fusiliers, 19th Foot, 33rd Foot, 77th Foot, 88th Foot, with the Rifle Brigade attached, formed on the flank; three of the regiments being drawn up at right angles to the rest of the line in consequence of the narrowness of the point. The apathy of the Turks was astonishing on this occasion. There were some three or four gentlemen on horseback, with their pipe-bearers in attendance, and two or three native carriages full of veiled women on the ground; but, though Scutari, with its population of 100,000 souls, was within a mile and a half, it did not appear that half a dozen people had been added to the usual crowd of camp followers. The Greeks were more numerous. At twelve o'clock Lord Raglan, attended by Sir George Brown, the Duke of Cambridge, Sir De Lacy Evans, the Earl of Lucan, the Generals of Brigade Bentinck, Sir C. Campbell, Pennefather, Airy, Adams, Buller, their Aides-de-Camp and Majors of Brigade, and Lieutenant Colonel de Lagondie and Chef d'Escadron Vico, to the number of thirty or forty, appeared on the ground in a perfect blaze of gold lace and scarlet and white plumes. They were received by the bands of all the regiments striking up "God save the Queen." Lord Raglan having ridden slowly along a portion of the lines, wheeled round and took his post in front of the centre regiment. After a short pause, just as the guns of the *Niger* were heard thundering out a Royal salute from the Bosphorus in honour of her Majesty's Birthday, the bands struck up the national air again, and down at once fell the colours of every regiment drooping to the ground. The effect of these 32 masses of richly dyed silk, encrusted with the names of great victories, falling so suddenly to the earth as if struck down by one blow, was strange and inexpressible. In another minute a shout of "God save the Queen" ran from the Rifles on the left to the Guards on the right, and threw tremendous cheers, gathering force as they rolled on with the accumulated strength of a thousand throats from regiment after regiment, made the very air ring, the ears tingle, and the heart throb. Some of the regiments pulled off their shakos, and waved them in the air in accompaniment to the shouts, others remained motionless, but made not less noise than their fellows. After the cheering had died away the march past began in quick time. In the evening, a handsome obelisk, erected in the centre of the Guards' camp, and crowned with laurel, was surrounded by fireworks.

The accompanying Illustration shows the Review; the troops massed in columns, at the base of the hill on which are situated the Scutari barracks. On the right is the cypress-grove of the cemetery. On the left of the view is Stamboul and Seraglio Point, with mosques and minarets in the distance; the Sea of Marmora, with shipping, steamers, &c.

ENCAMPMENT OF BRITISH TROOPS AT SCUTARI.



INSPECTION OF THE SECOND ROYAL SURREY MILITIA, AT GUILDFORD.

ROYAL SUSSEX MILITIA ARTILLERY.

On the 1st of June, this regiment—Duke of Richmond Colonel, Lieut-Colonel Carr commanding—practised at the Dépôt, Southover, Lewes (represented in the accompanying Engraving). The square openings in the wall of the gun-shed are supposed to represent the embrasures of a regular fortification, and they command the fine range of the South-downs. The two large guns on the right are 32-pounders, mounted on a dwarf traversing platform, about one-third of a circle, on which the guns turn. The regiment is also practised in the use of the field-batteries and mortars, at Woolwich.

The helmet, which is somewhat after the Prussian form, has just been completed. The devices on the front are very handsome: the decorations being—a Star of the Order of the Garter, in silver, with red cross in the centre; a scroll, with the words "Royal Sussex Militia," underneath; and two gilt cannons, crossed. The body of the helmet is of polished black leather.

INSPECTION OF THE SECOND ROYAL SURREY MILITIA.

On Friday, the 2nd instant, an inspection of the above regiment took place in the grounds belonging to the Prince of Wales Inn, in the Woodbridge-road, by Colonel Bushe. The regiment mustered nearly 700 men on parade, commanded by their noble Colonel, the Earl of Lovelace. The company was very numerous.

The regiment was turned out in open column of companies; and, having been inspected by the officers, the men were served out with ten rounds of blank ammunition per man. The regiment was wheeled into line, the ranks opened; and, on the arrival of the Inspecting Officer, the Regiment presented arms. Colonel Bushe then inspected the line, the Band playing the National Anthem; after which the Inspecting Officer complimented Lord Lovelace on the appearance of the men, and their remarkable steadiness under arms. The ranks were closed and broken into column right in front; they then marched past in open review order and quarter distance column opened out, wheeled into line, advanced in line, charged, retired by files from right of companies, covered by the light infantry companies, firing and retiring. The regiment got the word—front turn square on the leading divisions; skirmishers called in, and forcing the rear face, prepared to resist cavalry; the square fired by files from right and left of faces, and kneeling ranks fired a volley, which was performed in a steady and very soldier-like manner. The square was reduced into column, and retired. The column then advanced, covered with the light infantry company, and formed a square on the leading division, commenced file firing from the right and left of faces; skirmishers called in, and formed the rear face in a very steady manner. The leading ranks fired a volley, and loaded. The square was then reduced into column, and wheeled to the left, and deployed into line upon the leading division. The line retired, halted, fronted, and formed quarter distance column on the left division, right in front. The

ROYAL SUSSEX MILITIA PRACTICE, AT SOUTHOVER.

column was then wheeled to the right, and the regiment divided into wings, the right commanded by Viscount Cranley, and the left by Major Parratt.

Earl Lovelace commanded the brigade.

Colonel Bushe expressed himself highly satisfied with the inspection; adding, that the wheeling of the lines was beyond everything which he had anticipated.

The Earl of Lovelace addressed the officers and men at some length, and with impressive eloquence, which will not be forgotten. His Lordship concluded by calling upon the men to give three cheers for her Majesty the Queen, which they did with great enthusiasm.

After the inspection, the officers gave a sumptuous déjeûner at the White Hart Hotel; the Earl of Lovelace presiding. There were upwards of 200 guests.

The health of her Majesty was followed by "The Noble Colonel," and "The Ladies of Surrey" (coupled with it Viscountess Cranley, who presented the Regiment with splendid colours).

After the déjeûner dancing was commenced to the fine band of the Regiment, and was kept up with great spirit until nearly eleven o'clock.

We are indebted to Mr. Andrews, of Guildford, for the accompanying Sketch of the Inspection.

CALENDAR FOR THE WEEK.

SUNDAY June 18.—1st Sunday after Trinity.
MONDAY, 19.—Inigo Jones died, 1652. Sir Joseph Banks died, 1820.
TUESDAY, 20.—Queen Victoria's accession to the throne, 1837.
WEDNESDAY, 21.—Queen Victoria proclaimed, 1837.
THURSDAY, 22.—Trial of Queen Caroline commenced, 1820.
FRIDAY 23.—Le Sueur born, 1646. Akenside died, 1770.
SATURDAY, 24.—Midsummer Day.

HIGH WATER AT LONDON-BRIDGE
FOR THE WEEK ENDING JUNE 24

TO CORRESPONDENTS.

C. LENNOX, Frederoft.—We are obliged to our Correspondent for his offer; but, by reference to the ILLUSTRATED LONDON NEWS of the 3rd inst., he will find his suggestions have been anticipated.

H. G., Beds., is thanked. The localities have been too often engraved to be repeated.

I. M., Nottingham, will find the best account of the screw-propeller in the Treatise by J. Bourne, C.E.

E. G. W.—Yours is a question which it is impracticable to answer in our limited space.

W. H. A., Melbourne, is thanked.

H. R. W., Bickwell—Apply to Mr. Lumley, bookseller, High Holborn.

F. S. H., Valparaiso, is thanked; but we have not room for the proposed illustration.

A FRIEND, &c., Redruth, Cornwall.—The address of the Society is Exeter hall, London.

F. P., Manchester.—The employment of a Purser in the Royal Navy is to take charge of all the provisions, and to distribute them, according to a fixed scale, amongst the whole crew. He has a fixed salary, and some emoluments: he has a steward or assistant in all ships; and in a large ship he has a clerk.

H. M.—"The Tribune's Farewell" declined.

MAGISTER, Epping.—Certainly not.

G. O. S.—Our late Editions invariably contain the report alluded to.

A BIRMINGHAM SUBSCRIBER.—Pennies and halfpennies are in circulation of 1841, 1846, 1854, &c., and halfpennies and farthings *only* as early as 1838.

O. P. Q.—We cannot recommend any accredited work.

R. D.—We are not aware that any idea is at present entertained by the authorities of admitting gentlemen into the ranks of the Army as volunteers. During the Peninsular campaigns the practice was of frequent occurrence. When on duty, the volunteer fell in with the privates, and was told off without distinction. After the parade was dismissed he associated with the officers. On vacancies occurring, these gentlemen were generally promoted to the rank of Ensign. There are several officers now high in the profession who served in the capacity alluded to during the late war. Should the old system be revived, the Military Secretary would be the proper person from whom to gain information. No mention is made in the Queen's regulations regarding individual volunteers being attached to regiments.

DE ROSAS MILITAIRE.—The reason why there is no 5th Regiment of Dragoons, is as follows:—When the French, under General Humbert, invaded Ireland, in 1798, the corps formed part of the garrison of Castlebar. Humbert and his force with the Royal army there on the 27th August, and a battle took place, early in which the 5th Dragoons fled, involving the army in a rout so precipitate, that the affair was called the "Race of Castlebar." The Government resented that this panic was caused by disloyalty, more especially when, nine days afterwards, the Viceroy, only before whom 4000 regular troops had taken to flight, was received for a whole day in the port of Coloony, by less than 500 men, chiefly of the Limerick Militia, under the command of Colonel Charles Vereker, afterwards Lord Gort, by which they were led to march into Leitrim, where they were obliged to surrender to 20,000 men under the command of the Earl of Cornwallis, then Lord-Lieutenant. The motto of "Coloony" was granted to Colonel Vereker, and the thanks of Parliament given to his gallant little band; whilst the 5th Regiment of Dragoons was erased from the Army List, and has never been restored.

THE ILLUSTRATED LONDON NEWS

LONDON, SATURDAY, JUNE 17, 1854.

LORD JOHN RUSSELL having, in consequence of recent modifications in the Ministry, vacated his seat for the City of London was re-elected on Wednesday, without opposition. A show of hostility was painfully elaborated, it is true, by the one-idead Mr. Urquhart, whose peculiar mania it is to believe that the war is a "sham;" that the British Government, and more particularly Lords Aberdeen, Palmerston, and John Russell, are in collusion with the Czar; and that Turkey will eventually be delivered up like a lamb to the Russian butcher. Mr. Urquhart, however, failed to find a proposer. He had not even the opportunity of making a speech—except a few words after Lord John Russell had retired from the Guildhall; when, true to his melancholy delusion, he aimed a few despairing words at the heads of an unwilling and dispersing audience. He informed them that they had lost the chance of saving their country, and that they had made another "tool for the Emperor to work with." We will not do Mr. Urquhart the injustice of bringing against him the accusation that he levels so freely against others; yet, if he be not a monomaniac, it is difficult to explain his conduct, except upon the supposition that he is himself the paid agent of the Czar, and that his denunciations of Russia are the "shams" which he represents the war to be. But, leaving this point, as we presume no one way or the other, let Mr. Urquhart take go his own way, and retire into private life. We believe him to be honest; but even in that case he is more fit for the exclusive attentions of our excellent friend *Punch* than for the serious notice of other people.

Lord John Russell's speech to the electors was manly and straightforward, and will produce the same effects wherever it may be perused. Whether his Lordship expected a real draft of the arguments of those who still, with the Peace Society, must trust we should have allowed the Turks to fight their own battles with the Czar, or whether he showed the interest which every Constitutional Power in Europe—and more especially the States of Germany—have in resisting the barbaric domination of Russia, he was equally emphatic and convincing. We question whether in the Guildhall there was a single individual, except Mr. Urquhart, whose patriotism was not kindled by the sound sense and vigorous eloquence of the most illustrious English statesman of the present day, and who not only is honoured by, but honours, the City of London, by becoming its representative. In Germany, more especially, the speech will operate powerfully in favour of the Anglo-French Alliance. We wish its challenge could induce the Emperor Nicholas to come out from behind the stone walls of Cronstadt and Sebastopol, and meet our navies in fair fight in the open sea; but of that consummation there is little probability. It is in affairs like those of Sinope that Russian Admirals like to indulge. Nor can we wonder at this when we recollect that it is a rule in the Russian navy never to meet an enemy unless the Russian has double the number of ships, guns, and men, of the fleet opposed to it. Not after such a cowardly fashion was the naval supremacy of Great Britain attained; and not after such a fashion has it been, and will it be, maintained;—as the Emperor, we trust, will speedily learn to his cost, by the capture of the forts to which he trusts for security, and by the annihilation of his naval power in his two sole outlets, the Black Sea and the Baltic.

The re-election of Lord John Russell, though never for an instant in the slightest peril, is a matter for gratulation, at a time when it is necessary to prove to all foreign Powers that the war is a popular one; and that the Ministry—notwithstanding a few growls and grumbles now and then from a people whose privilege it is to speak their mind, and to criticise freely the acts and words of men in power—is supported, to the fullest possible extent, by the enlightened public opinion of the country. In other respects, the slight and unimportant changes which have taken place in the Ministry, do not appear to have given very general satisfaction. The recent discussions in Parliament and the Press, on the necessity for the appointment of a special Minister of War, prepared the public mind for greater changes than the Administration itself has deemed it expedient to carry out. Public opinion emphatically designated Lord Palmerston for the post of War Minister; and we regret that, for reasons of their own, and which they are not likely to divulge, the colleagues of Lord Palmerston, and perhaps his Lordship himself, did not lend countenance and support to such an arrangement. The Duke of Newcastle, though not so popular as Lord Palmerston, is an able, conscientious, and industrious public servant; and will, it is to be expected, prove an efficient, if not a brilliant, Minister, now that his whole attention is to be directed to one special and important department. Sir George Grey, who succeeds to the Seals of the Colonial-office, uncumbered with those of the Secretaryship of War, is a man whose antecedents are not of a nature to render him a favourite in the Colonies, but who possesses administrative and parliamentary talent that would have rendered him useful in almost any department, except that for which he has been selected. The other changes are too slight either for cavil or for defence. As President of the Council, Lord John Russell fills an office, not merely honorary and ornamental, but in a high degree important, especially in connection with the great question of Public Education, to which his Lordship has devoted the best energies of his life. Lord Granville, who has accepted, in the redistribution of place, a minor office, only bides his time to secure that higher position to which his talents and high character entitle him.

THE COURT.

The Court left town on Tuesday for Windsor Castle. Previously to the Court leaving London, her Majesty received a visit from the Countess of Neuilly.

On Monday her Majesty held a Privy Council, when the Duke of Newcastle resigned the seals as Secretary of State for the Colonies. Lord John Russell took his seat at the Council as Lord President; Sir George Grey was sworn in as Secretary of State for the Colonies; and the Duke of Newcastle as Secretary for War. Secretary of State. The Queen held an investiture of the Most Honourable Order of the Bath, at three o'clock in the afternoon, at Buckingham Palace. Sir James Graham, Mr. James Cosmo Melvill, and Rear-Admiral G. R. Lambert, were in succession created Knights of the Bath, receiving the honour kneeling before her Majesty.

On Tuesday evening the Queen had a dinner party at the Castle; the company at which included his Majesty the King of Portugal, his Royal Highness the Duke of Oporto, her Royal Highness the Duchess of Kent, the Duchess of Sutherland, the Duke of Wellington, the Portuguese Minister (Count Lavradio), the Marquis of Breadalbane, the Marquis of Abercorn, and the Earl Spencer.

On Wednesday their Royal Highnesses the Duchess of Cambridge and the Princess Mary arrived at the Castle, on a visit to her Majesty and the Prince Consort. The following distinguished company also arrived during the afternoon:—His Excellency the French Ambassador and the Countess Walewska, the Countess Lavradio, the Austrian Minister (Count Colloredo), the Duchess of Wellington, the Duke and Duchess of Beaufort, the Earl and Countess of Clarendon, the Earl and Countess of Beesborough, the Earl and Countess Granville, and the Ladies Harriet and Louisa Hamilton.

On Thursday the Queen and the Prince Consort, with the whole of the illustrious and distinguished visitors staying at the Castle, honoured the races at Ascot with their presence.

The Court returns to Buckingham Palace this day (Saturday).

The Marquis of Lansdowne gave a magnificent ball last evening (Friday) at Lansdowne House.

We are authorised to state, that the Marchioness of Breadalbane's second ball will take place on Monday, July 3rd.

The Earl of Ellesmere received a distinguished circle of literary and executive authority, on Tuesday evening, at his residence, St. James's.

THE Museum of Ornamental Art, at Marlborough-house, has been enriched by the addition of a choice collection of ornamental arms and armour—from the Royal Armoury, Windsor Castle—which has been graciously lent by her Majesty for the purpose. It consists of swords, daggers, pikes, matchlocks, plate armour, bucklers, &c., chiefly of early date, and many of them historically interesting. Amongst them, for instance, is the matchlock of the Dey of Algiers The ornamentation of some of the specimens is very rich and beautiful.

GUN-BOATS FOR THE BALTIC.—The *Arrow* and the *Beagle*, screw-steam gun boats, building by Messrs. J. C. Mare and Co., at Blackwall, are to be ready for launching on the 24th instant. The engines for these gun boats, two of 80-horse power, or 160 collectively for each, were ordered to be made by Messrs. Humphrys, Tennant, and Dyke, only nine weeks ago, and they are now ready to be put on board, so that no time will be lost in securing these much-required auxiliaries for the Baltic, for service with the fleet under the command of Vice-Admiral Sir Charles Napier.

DEATH OF CAPTAIN GIFFARD, OF THE "TIGER."—We regret to announce the death of Captain Lord Lately in command of her Majesty's Troop-ship *Tiger*, who received his wounds in defence of his ship, that was unprotected at the last when beaten down. He received a blow on the head, and another in the chest. He gradually sank from day to day, during his charge to the last—hopeless as the struggle was against fearful odds, and at every possible disadvantage. The melancholy intelligence of his death was despatched to Vienna by electric telegraph, on the 1st inst.; by the Austrian consul at Odessa. He was to be buried on the 2nd inst., with military honours. The young gallant gentleman, who fell by his side, was not a nephew, but a more distant relative. At the funeral, the captive crew of the *Tiger* were to pay the last respects to their deceased commander, who fell in defence of the ship's honour, and who was about to be sent to Moscow, with the exception of the surgeon, who remained to attend the Emperor of Russia.

LATEST INTELLIGENCE.

THE SIEGE OF SILISTRIA.

The advices from Silistria reach up to the 8th inst. The mine which had lately been laid, in order to blow up one of the bastions of the fort Abd-ul-Medjid, had produced hardly any effect. Nevertheless, however slowly the siege proceeds, there is still some progress visible, and several batteries have already been erected on both sides of the different points of attack. A sharp encounter took place on the 8th between parties of miners and counter-miners; the Russians were defeated, as the mine remained in the hands of the Ottomans. The besiegers have already approached within gun-shot of the fort Abd-ul-Medjid, and they lately fired a number of gabions with cotton, which they pushed on to the margin of their counterscarp, having their miners behind it, busy, meanwhile, in sinking two new shafts.

MOVEMENTS OF THE TURKISH ARMY

Letters from Orsova, of the 8th instant, bring us the intelligence that the Ottoman troops, which have lately been withdrawn from the Lesser Wallachia, are now marching to Rustchuk, via Nicopoli and Sistowa, and that they reinforce themselves by all the disposable forces which they meet on their road. It is further stated that Said Pacha, the commandant of Rustchuk, has received orders from Schumla to concentrate at that fortress a body of at least 40,000 troops, who are destined to break through the first investing line of the Russians at Turtukai, and then to come to the succour of Silistria. It is expected that Omer Pacha will also simultaneously make a diversion in favour of this fortress; but the main attack of the Russian positions is to be confided to the troops now assembling at Rustchuk. Two Ottoman steamers and eighty gun-boats, in the port of Rustchuk, were also preparing to second this expedition in behalf of Silistria. It was reported that it would take place about the 18th or 20th of this month.

THE AUSTRIAN SUMMONS.

The *Moniteur* gives credit to the statement printed in the German papers, that, at the interview between the Emperor of Austria and the Duke of Saxe-Coburg, his Imperial Majesty had declared that, if his summons to the Emperor of Russia to evacuate the Danubian Principalities should be rejected, he would immediately issue a declaration of war. The latest accounts from Stockholm intimate that Sweden is most anxious to join France and England in their war against Russia; and is only waiting for Austria to make the first movement, by which Sweden would be secured from having Prussia as an enemy in the Baltic.

GREECE.

A letter from Athens, of the 3rd, states that since the change in affairs the situation of the country is every day improving. In the towns of Nauplilia, the Piræus, Patras, Syra, and Hydra, addresses had been signed, which are to be sent to the new Ministry, expressing the confidence of the country in the programme it had adopted. These addresses show that the insurrection which has desolated Greece was the work of an ambitious and agitating minority.

BURNING OF THE "EUROPA"

Schooner *Mount Kingsford*,

Sir,—Having witnessed the burning of the transport *Europa*, with the 6th (Inniskilling) Dragoons on board, in the Bay of Biscay, about two hundred miles from England, I send you an account of it, with a small Sketch. I am a passenger of the above-named schooner, bound for Port-au-Prince, St Domingo. We did all we could for the poor fellows, wet and naked as they were, and will land them at Lisbon with the others (twenty-one) in the barque *Manco*, of Liverpool, now in port. On the 21st of May, originating, it is supposed, with the hay. It spread so rapidly that every one went to the boats just as they turned out. About eleven o'clock I went up the first boat, with eighteen in her. At half-past eleven, the second came alongside, with a third in tow, she having no oars, and having drifted across the second boat; otherwise they never could have cleared the dreadful sight. It was raining tremendously, very dark, and blowing hard. The second had five in her, and the third twenty-six, making a total of forty-nine. We bore down as soon as daylight to the wreck, where we saw the *Harmonie* of Dantzic, who had picked up twenty-six; and a brig—the *Clementine*, took up several more. The *Harmonie* keeps company with us, the captain having agreed to land the men at Lisbon. The *Clementine* lands hers at Gibraltar. There are about eighty-one saved, and twenty-three drowned or burned. The Colonel and Mr. Kelly (Veterinary-surgeon of the Regiment), are drowned. Lieutenant Webb, Cornet Dobbin, Cornet Black (Admiralty agent), and Mr. Noble (staff-surgeon), are among the saved; and the captain (W. Gardiner), and first, second, and third mates (Ginder, J. L. Adams, J. H. Stokes) of the *Europa*.

I am, &c. FRANK RICHARDS.

[We shall engrave our Correspondent's Sketch next week.]

The Admiralty have received, from Capt. Carnegie, of H.M. steamfrigate *Arrogant* (lat. 47.48 N., June 3), despatches detailing the above painful catastrophe. It would appear that the total loss is—two officers, six non-commissioned officers, two seamen, and one woman. Col. Moore would not leave the burning ship till his last man was in safety, and so perished.

WE have to record the deaths of the Rev. Lord Augustin Fitzclarence, aged fifty; the Earl of Mountstuart, at his seat in Ireland; and the Right Hon. R. Tufnell, at Cotton hall, Derbyshire.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS. *Rural Deanery.* The Rev. R. A. Gordon to Buntingford. *Rectories.* The Rev. W. Clifford to Foke, Dorsetshire; Rev. W. Cave to Mr. Shaen, with St. Mary Rededyn and St. Peter Colchrooke, Wm. Hetherington, Rev. Sir J. Macgregor, Bart., to Swallow, Lincolnshire. *Vicarages.* The Rev. W. French to Reydon, Suffolk, with the incumbency of Wrentham annexed; Rev G. Murray to Bedham, near Colchester. *Incumbencies.* The Rev. G. W. Bamfylde to Martin, Wiltshire; Rev. C. J. Collins to St. George's, Camberwell; Rev. W. L. Cox to Haywood, Wiltshire; Rev. H. J. Longsden to Seacroft, near Leeds. *Perpetual Curacy.* The Rev. J. Chamney to Meigh.

A TESTIMONIAL of regard and esteem has been presented to the Rev. J. Kingsley, from the parishioners of Bowden.

ST. LUKE'S CHAPEL, MARYLEBONE.—On Tuesday the Right of Public Baptism, one of the oldest Book pages in Natural Law, Bayswater road. Lord Russell being chief actor in the interesting ceremony. This church is being erected as a thank-offering for mercies vouchsafed by Almighty God to the inhabitants of the district at a time of visitation by cholera.

THE LONDON CHURCHES BILL.—A meeting of the clergy of the City of London was held at Sion College, on Tuesday, to discuss the Metropolitan Churches Fund Amendment Acts Bill. Dr. Croly spoke strongly against the measure, and referred to the destruction of churches and in Paris previous to the French Revolution. He concluded by moving the adoption of a petition against the measure. The Rev. Dr. M'Caul opposed the motion, which, however, was carried after some discussion.

THE CHURCHWARDEN CONTEST.—Great excitement has been produced in St. Paul's, this week, by the contest for the Churchwardenship of St. Paul's, Knightsbridge. The two candidates were Mr. Westerton and Mr. Theodore. The numbers at the final close of the poll on Thursday were, Westerton, 1326; majority, 326. A number of petitions have been presented.

THE MINISTRY.—The Cabinet, as at present constituted, consists of the following members:—Earl of Aberdeen, First Lord of the Treasury; Marquis of Lansdowne; Lord Cranworth, Lord Chancellor; Lord John Russell, President of the Council; Viscount Palmerston, Home Secretary of State; Earl of Clarendon, Foreign Secretary of State; Duke of Newcastle, Secretary of State; Sir George Grey, Secretary of State for the Colonies; Mr. Gladstone, Chancellor of the Exchequer; Sir James Graham, First Lord of the Admiralty; Sir Charles Wood, Board of Control; Lord Argyll, Privy Seal; Earl of Granville, Duchy of Lancaster; Sir W. Molesworth, Office of Works; Lord Sidney Herbert, Secretary of War.

MURDER OF SIX CHILDREN BY THEIR MOTHER.—On Saturday morning last, about six o'clock, a fireman, in passing a cottage at Westend, Edmonton, saw a pillow stained with blood outside one of the windows. He knocked at the door, and obtaining no answer he made his way into the house by means of a ladder, when he found a woman and five children lying on the bed, and another child on the floor. The woman, who was quite dead, had cut the throat of her children and then attempted to destroy herself. A letter, written by her husband is said to have been found in his pocket. The wretched woman, who is about forty-seven years of age, was first nurse to the Prince of Wales; but was discharged on account of some irregularity. Her husband is guardian of the ornamental waters and fisheries of Claremont. An inquest was held on the bodies of the children on Monday, when a verdict of "Wilful Murder" against their unhappy mother was returned.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The report that the Emperor and Empress proposed going shortly to he Camp du Nord, has now given place to another, which it seems likely will be carried out, and within a very short period. This plan states that the Empress is to proceed, about the 25th inst., to the Eaux-Bonnes and Biaritz, where she resided two years before her marriage, and for which place she has a peculiar predilection. After a stay of a fortnight, her Majesty will return to Paris. During the interval, the Emperor is to proceed to Marseilles, to witness the laying the foundation of the Imperial palace, which the town proposes to erect for him; he will then rejoin the Empress in Paris, and both will proceed, later, to the Camp at St Omer.

It is a subject alike of remark and regret that an unusual number of deaths among the eminent men of France have, within a very short space, followed in rapid succession. Among those which have created the most sensation has been that of Admiral Baudin, whose long and brilliant services—which would, at any time, have rendered his loss one greatly to be regretted—make it, at the present crisis, one yet more to be lamented. The funeral, which was performed according to the Protestant rites—the Admiral being of that faith—was attended by no less than twelve regiments of infantry, some detachments of cavalry and artillery, a large number of the Navy, the Maréchal Vaillant, Minister of War; Maréchal Magnan, several Generals and Admirals, and a large number of the functionaries of State, besides a host of friends and admirers, who wished to pay their last mark of respect to the memory of the deceased. Over the grave, in the Cemetery of Montmartre, the Admiral Mackau pronounced a funeral discourse, containing an account of the life and services of his illustrious *confrère*. Immediately following the death of M. Baudin, have been those of M. Mauguin, whose Parliamentary career is one recorded in the annals of French history; M. Vivien, formerly a Minister, and one who had presided over the Council of State during the late Republic; and M. Delahaute, Receveur-General of the department du Rhône, who died suddenly on board the steamer running between Lyons and Châlon, by which he was proceeding to his country residence.

An unusual and alarming number of suicides, many of them resulting from the most trivial causes, have, we lament to say, to be recorded. Among the most distressing have been those of a young lady of singular beauty, and of excellent family, who, in consequence of the unhappiness caused by the preference of her father and step-mother to her half sister, drowned herself in the Seine; and of a Prussian officer, who, being seized with deafness, which medical skill failed to remove, blew out his brains in a box at the Opera. Among the working classes, the frightful mania has increased, within a short period, to a terrible amount, and the public journals are daily filled with the accounts of these melancholy events—occurring principally among young persons, sometimes almost children, of both sexes: love-disappointments, reverses of fortune, family quarrels, sometimes merely an apparently causeless discouragement and disgust of life, all lead to these catastrophes; and drowning, suffocation, and the pistol are resorted to as the cure for evils which a moderate amount of religious feeling and common fortitude would lighten and render endurable, if not dispel.

A work which promises much interest is about to appear within a short period. This is the memoirs of a man whose name is intimately and singularly connected with the events of the commencement of the Restauration—M. de Maubreuil, who possessed himself of the diamonds of Marie Louise, who was accused of having attempted the life of Napoleon, and who, on an occasion when he wished to make certain revelations respecting the Prince de Talleyrand, sought to bring about an explanation by giving the latter a blow. It is said that the Memoirs in question are a series of the most singular and interesting details, derived from the author's experience, which has been great, varied, and peculiar.

M. Horace Vernet, who has been charged to illustrate the principal events of the Eastern War, has taken his departure for Constantinople to commence his artistic labours.

It is said, *apropos* of the late visit of the Queen Marie Amélie to Belgium, that the French Government not only signified to the Belgian Government that no objection would be made here to any stay, however prolonged, of the widow of Louis Philippe in that territory, but stated that if she wished, by passing through France, to avoid a longer and more fatiguing sea journey, every facility for doing so would be afforded her.

The terrible persistence of the rain here is already producing its usual results, inundations in various parts of the country. Most of the principal rivers have overflown in the low-lands, causing in many places serious damage, and destroying to a painful extent the brilliant promises held out by the beautiful spring. In the higher grounds, however, things look better, and if the weather improves to a reasonable extent, it is to be hoped that the various crops will bear at least an average proportion.

The Boulevard Malesherbes, which was to have been commenced this season, is not to be put in progress until after the Industrial Exhibition, as it would cause too great an encumbrement in the Faubourg St. Honoré and the neighbourhood of the Champs Elysées. It is also probable that the opening of the Rue de Strasbourg will be deferred.

The journal of the *arrondissement de Loudéac* has received an *avertissement* for a singular cause—the energy of its expressions in a polemic on the subject of manure!

Spanish dancers are at present the chief attraction here. The Gymnase has a company headed by La Perea Nena, a *danseuse* of first-rate talent; and the Palais Royal another, led by La Pepa Vargas, who, though a less accomplished dancer in an artistic point of view, is said to bear more completely the stamp of her nationality in her style. At each of the theatres, the dances are set as jewels in a mounting, in a little piece composed for the purpose of presenting them. That at the Gymnase is called "La Comédie au Château;" that at the Palais Royal, "Espagnolas et Bogardinas," in which Grassot and Bayonthe, as Russian boyards, display their usual comic talents in a series of *grosses bêtises*, which, however, has the desired effect of producing peals of laughter.

UNITED STATES.

The *Europa*, which left New York on the 31st May, arrived at Liverpool on Sunday evening. The papers are filled with details of the slavery riot at Boston, and of the excitement produced by that event and the passage of the Nebraska Bill. A petition to Congress for the repeal of the Fugitive Slave Law had been placed in the Exchange Reading room at Boston, and had already received a large number of signatures, embracing many well-known merchants, who in the case of the fugitive Sims, two or three years since, were among the most prominent and active upholders of the law. On the 26th, at Syracuse, the Abolitionists learning that a fugitive would pass through that place in custody with a United States' marshal, the bells were tolled, and a crowd of some 2000 persons assembled at the railroad depôt to effect a rescue. On the approach of the train the cars were attacked by the rioters. A negro man, a passenger, was discovered, but no fugitive, and the mob retired, evidently disappointed.

According to the *New York Herald*, the visit of Lord Elgin to Washington is to conclude a treaty in reference to the adjustment of the Fishery Question, as well as to provide for reciprocity of trade with the North American colonies. The principle is extended to all the natural products of each country, with the exception of coal, tobacco, and sugar, and it is thought the first-mentioned article will likewise be included. Great Britain has acquiesced in the terms, but with the important proviso that the Colonies also agree to them.

Letters from Vera Cruz, to the 16th ult., state that Santa Anna made a triumphal entry into the city of Mexico on the 16th. After Santa Anna retired the siege of Acapulo, he fought a battle with Alvarez, and defeated him.

The Washington correspondent of the *Herald* asserts that the President has prepared a bellicose message on the subject of Cuba.

By the *Franklin* steam-ship, which arrived off Cowes, *en route* to Havre, on Thursday, we have New York papers to June 3. The Cuban difficulty was assuming a serious character; Mr. Soulé having failed at Madrid in obtaining what the American Government demands. The fugitive slave Burns had been given up to his master. A large military force, including a detachment of artillery, had been necessary to overawe the populace.

CHINA.

The last Overland Mail contains an account of the affair at Shanghai, in which the foreign residents came into collision with the Imperial troops. The commercial letters justify the conduct o the residents, who had been provoked by the disorderly conduct of the soldiers, and deemed it necessary to give them a severe lesson. The Hong-Kong papers speak of the transaction as very unwise on the part of the English, and as likely to lead to a serious collision with the Chinese. The native Shanghai merchants have also published a circular, in which they condemn the conduct of the English in attacking the Imperialists. The capture of the Imperial intrenchments was not effected without considerable resistance being made. The casualties were two killed and thirteen wounded, and the loss on the part of the Imperialists is stated to be from 200 to 300 killed and wounded.

Sir John Bowring arrived at Hong-Kong on the 12th, and landed next morning under the salute due to his rank from the battery, repeated by the men of war, both British and American. At noon he was sworn in as Governor and Vice-Admiral of Hong-Kong, and Chief Superintendent of British trade in China.

INDIA.

Among other items of intelligence from India by the Overland Mail, which arrived at Trieste last week, we learn that, on the 9th ult., the steamer *Feroze* had left Bombay for the Persian Gulf, and that the defences of Bombay were being put in order, as if for the reception of an enemy. According to the latest intelligence, the Russian squadron was near Singapore.

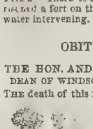
The rumours of Russian intrigue on the North-Western frontier are still as strong as ever. The latest report from Herat is, that forty Russians, having been associated with forty Persian officers, have gone to different places in Central Asia, with letters from the Persian King. They have engaged to strengthen and occupy Herat for a certain period of time; and the son of the late Vazeer Yar Mahomed Khan has agreed to leave it, and remain in Nooshapur, a district in Persian Khorassan; but he has not yet started. It is also said that the same Russian and Persian agents will come on to Candahar and Cabul. Dost Mahomed Khan is said to be at present inclined for an alliance with the British Government; while Scotian Mahomed Khan leans towards Persia. There is also a report that the Russians have built and garrisoned a fort on the shores of the sea, five marches from Oorgunge, no water intervening.

OBITUARY OF EMINENT PERSONS.

THE HON. AND VERY REV. GEORGE NEVILLE GRENVILLE

DEAN OF WINDSOR, REGISTRAR OF THE ORDER OF THE GARTER.

THE death of this much-respected divine occurred at his seat, Butleigh Court, near Glastonbury, on the 10th instant. The Dean was younger brother of the present Lord Braybrooke, being son of Richard Aldworth Griffin, second Lord, by Catherine his wife, youngest daughter of the Right Hon. George Grenville. At the decease of his uncle, Mr. Thomas Grenville (the munificent contributor to the British Museum), he succeeded to the Butleigh estates, and assumed in consequence the name and arms of Grenville. Soon afterwards he resigned the living of Hawarden, and retired to the Rectory of Butleigh, of which he had then become the patron. In 1840 he was appointed Dean of Windsor, and continued to hold that valuable preferment up to the period of his death. Comparatively early in life he had been nominated to the office of Master of Magdalen College, Cambridge, which is in the gift of the Braybrooke family as hereditary visitors, and at the time he resigned that appointment (only a few months since), he was senior member of the Heads of Houses at Cambridge.



The very rev. gentleman was born 17th August, 1789; and married, May 8th, 1816, Lady Charlotte Legge, second daughter of George, third Earl of Dartmouth, and had six sons, all bearing the name of Neville, and four daughters—the eldest of whom, Frances Catherine, is wife of the Rev. Edmund Peel, Vicar of Wargrave, Berks. Of the sons, the eldest, Ralph Neville, Esq., late M.P. for Wolverhampton, succeeds to the Butleigh property; the second, the Rev. William Frederick Neville, becomes Rector of Butleigh; the third, the Rev. Seymour Neville, is one of the Minor Canons of Windsor; the fourth, Captain Edward Neville, is now with his regiment in Turkey; and the fifth, Glastonbury, is Lieutenant, Royal Engineers.

SIR LOFTUS OTWAY, C.B.

LIEUT.-GENERAL SIR LOFTUS OTWAY, C.B., Colonel of the 84th Regiment, a very distinguished British officer, was the fourth son of Cooke Otway, Esq., of Castle Otway, in the county Tipperary, by his wife Elizabeth, daughter of Samuel Waller, of Lobinstown, in the same county. Loftus Otway was born in 1775; and, having entered the Army in his youth, passed the greater part of his life in the service of his country. He acted in Ireland in suppressing the rebellion of 1798, and he achieved a high reputation in the Peninsular War; he commanded three regiments of Portuguese cavalry at the Battle of Albuera. He obtained, in 1814, the honour of Knighthood, and was made a C.B. Sir Loftus Otway was also a Knight Commander of the Order of Charles III. of Spain. He became a Lieutenant-General in 1851.

Sir Loftus married Frances, only daughter of Sir Charles Blicke, of Carcon-park, Surrey, by whom he leaves a son, Loftus Charles Otway, Esq., Secretary to the British Legation in Spain; and a daughter, Georgina Frances, wife of Capt. J. W. Hughes, 4th Light Dragoons. Sir Loftus Otway died on the 7th inst., at his residence, 13, Grosvenor-square.

The family of Otway to which Sir Loftus belonged is one of great antiquity and eminence, both in England and Ireland. The late Hon. Robert Otway Cave, M.P. (whose mother the present Baroness Braye's right to the Braye Barony was established in 1839), was the nephew of Sir Loftus Otway, being the son of his eldest brother. Sir Loftus's second brother was the late Admiral Robert Otway, G.C.B., who was created a Baronet at the Coronation in 1831, and who died in 1846.

SIR THOMAS EDWARD MICHELL TURTON, BART.

THIS Baronet died on the 13th April, at the Mauritius, on his way to England from India, for the recovery of his health.

Sir Thomas was born 8th November, 1790, the only son of the late Sir Thomas Turton, of Starborough Castle, county Surrey, M.P. for Scarborough, created a Baronet 18th May, 1796. He adopted the legal profession; was called to the Bar in 1818, and held the important office of Registrar of the Supreme Court at Calcutta from 1841 to 1848. He married, first, 2nd November, 1812, Louisa, second daughter of Major-General Browne, by which lady (who obtained a divorce in 1833) he had married again) he has had issue. Sir Thomas's second wife, who survives him, is Maria-Louisa Hume, second daughter of Captain E. Denman, R.N.

ALEX. GRANT, ESQ., OF ABERLOUR, BANFFSHIRE, N.B.

THIS gentleman died at his residence in Arlington-street, Piccadilly, on the 7th ult., at the advanced age of 80. In early life Mr. Grant went out to Jamaica, under the auspices of his relative, the late Alexander Donaldson, Esq., and, by his industry and upright conduct in those days, soon became a Magistrate and Member of Legislature in that Island. Since his return home, in 1818, he has been a well-known and highly-respected West India merchant; and he was a Deputy-Lieutenant of his native county of Banff.

NOTES OF THE WEEK

THE CRYSTAL PALACE.

The opening of the Crystal Palace at Sydenham (full details of which will be found in another part of our Paper) was the event of the week; perhaps of the season. Originating out of the Great Exhibition of 1851, the new undertaking, and its ceremony of inauguration, are planned very much upon the same model. There were points of difference, however, which could not have passed unnoticed. For the building itself, it is larger than that in the Hyde-park; and an improvement upon it, in many respects—more especially in the two additional Transepts, and in the arched roof of the Nave, in place of the flat one, which had a mean and depressing effect. For the ceremony, it was very similar to that of 1851, so far as externals go; but, in the absence of the great industrial resources then present, which have not yet arrived at Sydenham, the pageant of the 10th of June, 1854, was tame in comparison with that of its predecessor.

NELSON'S DAUGHTER.

IT is now nearly half a century ago (Oct., 1805) that Nelson on the glorious day of Trafalgar, in a codicil to his will, solemnly bequeathed his only daughter "Horatia," to the beneficence of his country, adding, "this is the only favour I ask my King and country, at this moment, when I am going to fight their battle;—he then girded on his sword, and went forth to perish in the hour of victory. Poor Nelson! his great and generous soul was little able to conceive how small and weak a thing is public beneficence—he little dreamed how his precious legacy would be received by a grateful king and nation. Undisputed naval supremacy and a long peace were purchased for us by the blood of Nelson, on that day—peace during which England has grown rich; boasting much about Nelson, and the Nile and Trafalgar, and never blushing at the thought of Horatia. Occasional appeals made on behalf of the orphan-bequest have been treated with neglect, not to say contempt, by successive Governments. And why? The danger and difficulty which Nelson braved had passed away, as they imagined, for ever, and there was no longer need for Nelsons. Recent circumstances, however, have wonderfully changed the spirit of our times: the nation has again occasion to call upon the naval service, and looks hopingly and anxiously to see springing from its ranks such spirits as those of Nelson, Hardy, Collingwood, of old; yet, how dare she hope thus, when the dying request of Nelson is unanswered? But, better late than never; and we are glad to see that a deputation, headed by Vice-Admiral Sir William H. Dillon, K.C.B., has had an interview with the Chancellor of the Exchequer, calling his attention to the subject. The cautious Minister, having "asked for a copy of the codicil to the will" which was duly supplied him, "and having also examined the difficulties which presented themselves to the carrying out of the wishes of the deputation—*difficulties, however, of a very slight character*—said he would consult the other members of the Cabinet upon the subject, before coming to any definite decision on the matter." Making allowance for the usual official reserve, we cannot help fancying that we see in this announcement an honourable, though tardy, solution of this painful question; and proud will be the day when it is signalled through our fleets in the Baltic and the Black Sea, "England has remembered Nelson in the day of her trouble—the debt is paid!" Then, and not till then, may we repeat his last memorable order of the day—"England expects every man to do his duty," and go forth confidently, as he did, to battle.

POST-OFFICE CONTRACTS.

A bargain is a very good thing, when it is all on the right side; but as soon as there is the slightest chance of the reciprocity principle coming into operation, how naturally and how piteously do we *cry out*! The Peninsular and Oriental Steam Navigation Company, having during a long series of years enjoyed an immensely profitable contract with the Post-office, for the conveyance of mails, begin for the first time to experience a slight reverse; arising from the increased price of coals, materials, &c., attributable, as they allege, to the war. Insuring all the long period of high salaries, lavish expenditure, and thumping dividends, when the public suggested that the bargain was a bad one, and that their work might be done better and cheaper under a system of free competition, instead of one of monopoly, the Directors complacently declared that the arrangement was an admirable one; and "stuck to their bond." Now that the usual dividend is temporarily suspended, and salaries also threatened, they come with a begging letter to the Lords of the Admiralty, "for such an augmentation of the payments for postal service as the Company may be found fairly entitled to, in consideration of the altered state of circumstances caused by the war;" and we are sorry to add that the said Lords have been weak enough to "intimate their willingness to institute an inquiry into the matter." The answer would have been a plain one—"Let them stick to their bond." One inevitable result of this "agitation" of the matter, however, will be to explode the system of monopoly contracts for the future and that will be a change in the right direction.

POLICE REGULATIONS.

The police are a very active and clever set of men; but, like other people, they want a little looking after at times. It is a general complaint, that by a singular fatuity, whilst they are very conspicuous, very often out, when there is nothing to do; they are never to be found when they are really wanted. Eschewing the ways of wickedness, the resorts of thieves, and the scenes of vulgar and dangerous riot, they delight in associating themselves with the proceedings of the respectable classes—at the theatre, the Ball, or the *fête champetre*—where they constitute themselves masters of the ceremonies. They should be induced, however, in their important vocations, to exercise their sprinkling gently, else they will become a bore and a scourge, instead of protectors of peace and order. A case took place at Bow-street, the other day one of a class of very frequent occurrence we are sorry to say, and which, though affording very good sport to the authorities whilst they last, are attended with great inconvenience to the unfortunate parties which calls for a word of remark. It was that of a gentleman's coachman, who was cast into limbo, together with his master's horses, vehicle, and all, charged with having broken the "police regulations" at the Olympic Theatre. It appears from the report that—

Mr. Baldwin, accompanied by Sir Charles Young, had been, with a party of ladies, at the Olympic Theatre; and, at the close of the entertainment, their carriage was sent for, and arrived in due course, but the constable on duty declared that no one answered to the name of Baldwin and he therefore called on the defendant to move on with his carriage; but he refused, seeing Sir C. Young in the lobby; and, in consequence, he was dragged off his box, and conveyed, carriage and all, to Bow-street, where he was detained in custody.

Mr Baldwin and Sir C. Young both complained of the extreme inconvenience to which the ladies of the party were subjected by the detention of their carriage, especially one elderly lady upwards of ninety, who had been induced to visit a theatre for the last time to see "the First Night." Owing to the extreme measures of the police, they were left alone in the lobby, deserted by the whole house, and it was only through an orange-girl they ascertained what had become of the carriage and coachman.

Upon this statement we submit that the police were guilty of a gross outrage, and ought themselves to have been the defendants. The magistrate, with an evident leaning in favour of the "ministers of the law," went so far as to consider "that the police ought to have been satisfied with the name and address of the defendant's master," and—"dismissed the case."

THE PARIS BOURSE.—SPECULATING FOR THE RISE.—(SEE PAGE 573.)

THE PARIS [illegible]—WAITING FOR THE BALL.—(SEE NEXT PAGE.)

THE "RISE" AND "FALL" AT THE BOURSE OF PARIS.

I.

Build your Tower of Babel,
Oh ye busy crowds!—
Ye are deft and able,
Strong and sure and stable—
Build it to the cloud!
Build with gold and paper,
Stock, and share, and scrip;
Broad at base and taper
As a sailing ship.
Build it up, we pray you try—
Right through Cloudland to the sky!

II.

Fortune's utmost malice
Finds you tough to slay;
To her shafts grown callous
In your lofty palace,
Working night and day.
Palace! No, an altar,
Raised for Mammon's self,
Where each word you falter
Is a psalm of pelf.
Shrine of Lucre—holy fane!
High Cathedral of St. Gain!

III.

Hark! the voices roaring!
Hark! the Babel din!
'Tis an anthem soaring,
'Tis a loud adoring:
Stoop, and enter in.
Mockery! Illusion!—
Furious oaths and bells!
Madness! rout! confusion!
Cries, and hoots, and yells!
Like a tide the people go—
Frantic, heaving to and fro.

IV.

Shall the rolling thunder
Shake it, base or roof?
Or the earthquake, under,
Rend the walls asunder—
Walls, destruction-proof?
Shall the sands entomb it?
Or the waters drown?
Or the fire consume it,
Till it topple down?—
"No!" a myriad voices cry,
"Great is Mammon! lift him high!"

V.

Oh, ye soap-sud blowers!
Pause and look around!
Oh, ye hazard-throwers!—
Loungers, comers, goers—
Hear ye not a sound?

Sturdy knaves and schemers,
Confident and bold;
Dupes and silly dreamers,
Ye are bought and sold!
Hark! a whisper far away!
Lo! a shadow on the day!

VI.

Eager-hearted strivers
That can toil and sweat,
Floaters, waders, divers,
Deep and keen contrivers,
Getting but to get;—
Lo! the monster, PANIC,
Looming large and near,
Breathing vague, tyrannic
Frenzies in each ear!
Who are dregs? and who are scum?
None can tell us—PANIC's come!

VII.

Oh, the foul example!
Oh, the selfish town!
In this earth so ample,
Wherefore crush and trample
Each his neighbour down!
Hark, the shouts and ouroes!
Hark, the wildering cry!
Close your yawning purses,
Men of gold, and fly!—
Fly! and hide in caves and holes:
Happy if you save your souls.

VIII.

Towers, their turrets lifting,
Carved with rare device,
Feel a sudden shifting,
As of basements drifting
On the broken ice.
Then a stifled rumbling,
Then a crash and fall:
Down comes Babel tumbling—
Domes and towers and all!—
Dig amid the whirling dust;
There is something left?—we trust.

IX.

Nothing worth the trouble—
Only stocks and shares;
Powdered dirt and rubble,
Paper, rags, and stubble,
And a few—despairs!
Contracts and debentures
For the winter fire,
Waifs of wrecked adventures
Stranded in the mire:—
Nothing else, in whole or parts;
Nothing—but the broken hearts!

C. M.

SPECULATIONS FOR THE RISE AND FALL AT THE PARIS BOURSE

(From a French Correspondent.)

THE Bourse has taken the place of the public gambling-houses which were suppressed at the commencement of the reign of Louis Philippe. Public morality has not in reality profited much by the abolition of those evil haunts; but the passion for gambling has, on the contrary, received fresh stimulus from the breaking up of the old *tripots*, and the substitution of a fine palace, at the cost of £350,000 sterling. The same loose principle—the desire for inordinate gains, obtained by chance, and not by labour—characterises both the frequenters of the "rouge et noir" tables and the gamblers at the Bourse. Attempts have often been made to justify the system of gambling at the Bourse, by representing it as an important element of political stability, on account of the great number of wealthy capitalists whom it interests in the maintenance of peace. But such arguments are of little value; for it is not from political stability, but from political instability, that the financial fluctuations proceed, which give rise to the hazards and speculations at the Bourse. It may be mentioned *en passant* that women were for some time allowed the right of entrance to the Bourse; and that, on their expulsion, they set up a gambling establishment of their own, opposite the Bourse, where they still continue to carry on operations, and gamble with as much or more virulence than men.

Of the *bond fide Agens de Change*—men whose business it is to buy and sell shares—who conduct their affairs, for the most part, on honourable principles; and who are in France, as in other countries, largely interested in the maintenance of public credit—we do not profess to speak in detail. It may suffice to say that they form a powerful company, numbering sixty members, and realising between them an annual revenue supposed to amount to 724,000,000 francs. They are appointed by the Government. The percentage allowed to them is fixed at ¼th per cent on the business they effect; so that it is easy to calculate to what an enormous sum their general operations must amount in the course of the year.

The influence of these agents is very great, as the instruments of the great bankers and money-dealers, whose combinations they constant or favour. The great bankers are suspicious in the midst of the agitated and miscellaneous crowd of the Bourse, from their quiet attitude and small number. They occupy a position in the left of the circle or "*parquet*" of the *Agens de Change*. The opposite side is that in which the *Coulissiers* assemble. The latter derive their name from the *coulisses*, or passages leading to the old Bourse. The profits of these outside jobbers are small compared with the sums derived by the legitimate leviathans of the Exchange. Many of them are very skilful, and often exhibit much penetration in discovering amidst the flow of political events the variations which affect the value of public and other securities. The *Coulissiers* are speculators by profession; but, not content with the excitement of the Bourse, they carry on their all-engrossing pursuits even amidst pleasure, and during the intervals of relaxation. It is chiefly in the gossip of the *Coulisses* that "coulisse-bull stories" or *Canards*, are concocted.

Political events are the principal causes which operate on the "*Cours des effets et des titres*," but it would be erroneous to attribute any permanent effect to such causes. Events have originated in extraordinary and sudden rises in the Funds, but even that scene for the time to overturn the Government of the country, for there are often powerful and secret influences at work which bring about consummations which have baffled the logical calculations of the keenest speculators.

The extraordinary scene that presented itself on the opening day of the new Bourse, when the dense crowd of impatient speculators gathered beneath the pillars of the great Grecian temple dedicated to Mammon, is remembered by the Paris, that even that scene sinks into insignificance when compared with the singular spectacle which the interior of the Bourse presents on a day of political crisis. It has been noticed that these financial commotions are periodical, and recur, on an average, every seven years. During these panics the consternation of the "Mammonites" is universal. A mournful silence reigns throughout the crowded halls of the Bourse. The voice of the crier, mounted in his rostrum, resounds as in an empty house: the "Fall" has crushed for the time those schemers, hearts, and petrified those busy tongues. But a sudden "Rise" changes the face of affairs: the groups re assemble, the game recommences, and the silence is succeeded by hubbub and confusion of voices.

[The two Engravings of the Bourse which we this week present to our readers have been executed with great care and precision. Most of the individuals represented are portraits, which will be easily recognised in Paris.]

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

THE WAR SECRETARY.

The Earl of ABERDEEN, in answer to a question from the Earl of Ellenborough, stated that the Government had no intention to bring in a bill to repeal the statute of Queen Anne which enacts that not more than two Secretaries of State shall sit at the same time in the House of Commons.

The Exchequer-bonds (£8,000,000) Bill, and the Vaccination Act Amendment Bill were each read a third time. The Railway and Canal Traffic Regulations Bill was read a third time. The Income-tax (No. 2) Bill, the Church Building Acts Bill, and the Industrial and Provident Societies Bill severally passed through Committee.

HOUSE OF COMMONS.—MONDAY.

A new writ was moved for Morpeth, the representation of which borough had been vacated by Sir George Grey's acceptance of the office of Colonial Secretary.

STAMP-DUTIES BILL.

On the motion for going into Committee on the Stamp-duties Bill, Mr. HUME, while admitting that if the duties on foreign bills of exchange were to be retained, the proposed scheme was an improvement, contended that, on currency grounds, those duties were most objectionable.

After some observations by Mr. Gregson, Mr. Thornely, and Mr. M'Gregor, the House went into Committee, and the first three clauses were agreed to.

Mr. HUME moved the omission of clause 4, which imposes the duties he had complained of.

After observations from various members, the CHANCELLOR of the EXCHEQUER said that this was the arrangement of a uniform tax, and the removal of an exemption for which there were no grounds. He would be glad to remove all stamps on bills, but circumstances did not enable him to afford it. The principle he contended for was that upon which all recent fiscal reforms had been based. If the Committee decided to retain the unjust exemption now existing, it would be impossible for him to carry out the great boon designed to inland trade.

After some further discussion the Committee divided, and the numbers were—For the clause, 173; for Mr. Hume's amendment, 110: Majority for Government, 63. The clause was agreed to.

The remaining clauses were discussed at some length, and the Bill passed through Committee. The House resumed, and immediately afterwards went into Committee of Supply on the Civil Service Estimates.

ROMAN CATHOLIC CHAPLAINS.

On a sum of £271,993 being proposed for the maintenance of Government prisons and convict establishments at home,

Mr. SPOONER moved the omission from it of £250 for special services of Roman Catholic priests in prisons.

Lord PALMERSTON defended the vote, and showed that allowances to Roman Catholic priests for services in prisons were not new. It was already the system at Millbank, and it was intended to extend it to all the Government prisons. The very purpose for which men were confined in gaol would be marred, if not defeated, if means were not found to touch their minds and reach their hearts

Mr. SCHOLEFIELD regarded the proposition of his honourable friend as dictated by narrow and bigoted views. He was willing to pay for chaplains of the Church of England, the richest in the country, while he refused to give anything to the priests of the poorest.

Mr. NEWDEGATE supported the amendment on the ground that every concession to Rome was an encouragement to the aggressions of Rome.

A long discussion ensued, when the Committee ultimately divided, the numbers were—For the amendment, 136; against it, 136: majority against the Government, 22.

The House having resumed, the Landlord and Tenant (Ireland) Bill, and the Leasing Powers (Ireland) Bill, were read a second time.

HOUSE OF LORDS.—TUESDAY.

DIVORCE AND MATRIMONIAL CAUSES BILL.

The LORD CHANCELLOR, in moving the second reading of the Divorce and Matrimonial Causes Bill, said the measure was intended to facilitate divorces for the cause of adultery, to transfer the jurisdiction over matrimonial suits from the Ecclesiastical Courts to Chancery, where a Court of Divorce would be established, consisting of the Lord Chancellor, the Chief Justice of the Queen's Bench, the Master of the Rolls, and two other members appointed under the Great Seal. From this court an appeal would lie to the House of Lords.

A discussion of considerable length ensued.

Lord BROUGHAM and Lord CAMPBELL approved of the principle of the measure, suggesting some modification of its details

Lord REDESDALE apprehended that the measure would prove prejudicial to morality, and derogate from the sanctity with which the marriage vow ought to be surrounded

Lord St. LEONARDS also opposed the bill, remarking upon the injury it would entail on the members of the ecclesiastical bar.

The bill was ultimately read a second time.

The High Treason (Ireland) Bill was also read a second time.

The Exchequer Bonds (£8,000,000) Bill was read a third time and passed, after some opposition from Lord BROUGHAM.

The Railway and Canal Traffic Regulation Bill and the Income-tax (No 2) Bill were respectively read a third time and passed.

HOUSE OF COMMONS.—TUESDAY.

LOSS OF THE "TIGER."

Sir J. GRAHAM, in reply to Captain Scobell, mentioned that official information had been received of the loss of the *Tiger*, and, as the circumstances must undergo the ordeal of a court-martial, it would be inconvenient in the meantime to produce the papers.

BLOCKADE OF RUSSIAN PORTS.

Sir J. GRAHAM, in answer to another question put by Mr. Horsfall, expressed his belief that the Admiralty in the Black Sea had adopted the established effective blockade of the mouths of the Danube. The Western Powers had determined that the blockade would be made to bear upon the ports of any foreign state.

THE CREW OF THE "SIAM."

Sir J. GRAHAM, in answer to Mr. W. Wilkie, stated that no "round robin" had been sent to him by the crew of the *Siam*. The conduct of the corporal punishments in the case of board that ship was greatly exaggerated. He thought it would not be necessary to lay off the ship.

THE BALLOT.

Mr. H. BERKELEY moved for leave to bring in a Bill to provide that all votes at Parliamentary elections in the United Kingdom should be taken by the ballot. Supporting the argument against the ballot founded on the assumption that the electoral franchise was a trust and not a right, he contended that the privilege was, in truth, a personal attribute appertaining to every voter, whose exercise should be limited only by two conditions—namely, that it should be unpurchased and unforced. For fulfilling these conditions he urged that the ballot offered the best if not the only effectual contrivance.

Lord D. STUART seconded the motion, and declared his persuasion that no reform could be complete without the ballot, nor any reformer sincere who did not advocate its adoption.

After a few words in support of the motion by Mr. WARNER,

Lord PALMERSTON resisted the proposal for introducing the ballot, on the ground that it would be ineffectual in securing secrecy to the voter; that, even if rendered perfect in that respect, it would be altogether discarded by the great bulk of the electorate, who prefer the open and manly proceeding of public voting; and that it would be available only for the few degraded voters whose whole life was a tissue of concealment and duplicity. The vote, he contended, was essentially a trust: its use was at once the exercise of a right and the performance of a duty.

Sir J. WALMSLEY replied to the arguments offered by the Home Secretary, and emphatically denied the assertion that the ballot was "un-English." He declared that every extension of the franchise which did not include that system of voting was a fraud.

Mr. BRIGHT insisted that the existence of undue influences at elections was undeniable and universal. The Liberal constituencies would be hoped, hereafter make the ballot a test for the representatives they returned, and the Liberal members make it a *sine qua non* in the Government they supported.

Sir W. MOLESWORTH denied that the vote was a trust in any sense which should compel the elector to endure the ordeal of publicity, and declared that no honest effort could be made on behalf of electoral purity before the ballot had been tried—at all events, as an experiment.

Mr. H. BERKELEY having replied, the House then divided. For leave to bring in the bill, 157; against, 194: majority, 37.

IRISH CHURCH.

Mr. Serjeant SHEE moved for leave to bring in a bill to alter and amend the laws relating to the temporalities of the Church in Ireland, and to increase the means of religious instruction and church accommodation for the Irish people.

The motion was seconded by Mr. P. URQUHART.

Sir JAMES GRAHAM moved the adjournment of the debate; which was agreed to, after a few words from Mr. Napier, Sir J. Young, Mr. Newdegate, and other members.

HOUSE OF COMMONS.—WEDNESDAY.

Mr. PACKE withdrew his Church-rates Bill, deeming it hopeless to persevere; and the Public Revenue and Consolidated Fund Charges Bill passed through Committee.

In a Committee of Ways and Means, Mr. WILSON stated that, upon reconsideration, the Government had resolved to allow sugar to continue to be used in breweries.

The resolutions were agreed to.

The other business was disposed of, and the House adjourned.

HOUSE OF LORDS.—THURSDAY.

On the motion of Lord BROUGHAM, the Witnesses Bill was read a second time. The object of the measure was to compel the attendance of witnesses in civil cases from one part of the United Kingdom to any other part in which the trials take place, in respect to which their evidence may be required, upon receiving the ordinary subpœna. As the law at present stood their attendance was only required in criminal [illegible]

LEGISLATIVE COUNCIL (CANADA) BILL.

The Duke of NEWCASTLE, in moving the second reading of the Legislative Council (Canada) Bill, said that the object of it was to repeal the clauses in the Union Act which prevented legislation by Canada itself; with the view of enabling the Canadian Parliament to effect such alterations in the Legislative Council as would render the constitution of that body more in accordance with public feeling in that country.

The Earl of Ellenborough and Lord Brougham severally suggested that a provision should be made for the amicable separation of Canada from this country.

After some discussion the bill was read a second time.

The High Treason (Ireland) Bill and the Vaccination Act Amendment Bill severally passed through Committee.

The Excise Duties' Bill was read a second time.

HOUSE OF COMMONS.—THURSDAY.

Lord J. RUSSELL took the oaths and his seat on his re-election for the City of London.

OXFORD UNIVERSITY BILL.

The House having gone into Committee upon the Oxford University Bill, Mr. E. DENISON, in reference to the changes which had been made in the bill during the recess, argued that the measure had been transformed into an enabling bill merely. The names of the additional Commissioners would have been mentioned.

Lord J. RUSSELL said that he had been in communication with two gentlemen, but he was not yet in a position to mention their names.

The consideration of the bill from the first clause was then entered upon, and several verbal alterations made.

Clauses up to 32 were agreed to.

Several bills upon the paper were advanced a stage.

HOUSE OF LORDS.—FRIDAY.

ROYAL COMMISSION.

The Royal Assent was given by commission to the following bills, viz., the Consolidated Fund (£8,000,000); Exchequer Bonds (£8,000,000); Income Tax (No 2); Industrial and Provident Societies; New River Company (New Reservoirs, &c.); Islington Cattle Market; and several other local bills.

The Lords Commissioners were the Lord Chancellor, Lord Stanley of Alderley, and Lord Canning.

In reply to the Earl of Donoughmore, the Earl of HARROWBY said, the evidence taken by the Commission of Inquiry on the College of Maynooth was complete, and would soon be laid before the House. But there was certain documentary evidence, which was procured through the agency of the Foreign Office, as to the mode of educating ecclesiastics in different Roman Catholic countries, and which had only recently come into the hands of the Commissioners. Those documents were all now translated, and they would be printed immediately. As soon as they were printed, the Commissioners would give the subject the most mature consideration.

The Earl of ELLENBOROUGH having moved for further returns as to Miscellaneous Estimates from 1835 to 1853, proceeded to contrast the charge contained in the estimates of the respective years, and observed that the total excess of the Estimates in 1853 over those of 1835 was £1,430 000.

The Duke of NEWCASTLE justified this increase in the expenditure.

The Witnesses Bill, and the Excise Duties Bill passed through Committee.

The Customs Duties Bill was read a second time.

The High Treason (Ireland) Bill was read a third time and passed.

The Vaccination Act Amendment Bill was reported with amendments.

HOUSE OF COMMONS.—FRIDAY.

The House met at twelve in the morning, and was occupied in the consideration in Committee of the Valuation of Lands (Scotland) Bill, in which some progress was made. The House adjourned at three o'clock until five o'clock.

The House was re-assembled at five o'clock.

Lord D. STUART gave notice that on Monday next he should call upon the Government to give some explanation to the House on the subject of the late Ministerial changes.

LOSS OF THE "EUROPA."

Sir J. GRAHAM, in reply to Lord Jocelyn, said, that he had received intelligence of the loss of the *Europa*, which, according to the reports given in the daily journals had been burnt, while on her passage to Gibraltar. From the details entered into by the right hon. Baronet, it appeared that the vessel, when last heard from, was deserted; but it was ascertained that the greater portion of the crew, with the soldiers on board, had escaped. After the fire was discovered, the *Europa* was boarded by another vessel, and out of eighty-seven persons on board, all but twenty-one were rescued. In conclusion, the right hon. Baronet expressed his regret at being compelled to state that there was reason to believe that the conduct of the crew was far from satisfactory. A strict investigation, however, would be instituted into the circumstances attending the sad catastrophe.

THE OXFORD UNIVERSITY BILL.

The House then went into Committee upon the Oxford University bill.

TERRIFIC THUNDER-STORM AND LOSS OF LIFE.—The metropolis and suburban districts were, on Tuesday, visited by a fearful storm of rain, thunder, and lightning, which was attended with considerable loss of property, and the death of one man, besides greatly jeopardising the lives of several others. The storm appears to have been particularly severe in the neighbourhood of Woolwich. Three men were struck down by the electric fluid on Shooter's-hill-road, but none of them were much injured. A travelling fishmonger, named Boyce, who was standing near them, was killed on the spot. The market-gardens in Kent were much damaged by the torrents of rain which fell during the storm.

STOPPAGE OF BISHOPSGATE-STREET.—The busy thoroughfare of Bishopsgate, between Crosby-hall and Bishopsgate Church, was completely ripped on Monday, by order of the Lord Mayor, and the wooden pavement taken up to make room for a set on pavement. Considerable inconvenience will be experienced for some time, as carriages, omnibuses, and other vehicles will have to make a detour into Broad street.

THE ROYAL BOTANICAL SOCIETY.—The first show of American plants for the season took place in the Gardens of this Society in the Regent's park on Monday. The collections exhibited were those of the Right Hon. Baroness Rothschild, Messrs. John Waterer, Mr. Baker, and Messrs. Standish and Noble. The flowers were very brilliant. Three or four thousand persons were present, and the usual military bands were in attendance.

QUEEN'S COLLEGE, BIRMINGHAM.—The Dean of the Faculty has received a communication from the Horse Guards, in reply to a memorial from the Council of the College, to the effect "that the General Commanding-in-Chief has granted to that body the privilege of recommending gentlemen for appointment to the medical department of the Army." The Council is also in communication on the same subject with the Hon. East India Company.

TOWN AND TABLE-TALK ON LITERATURE, ART, &c.

THE handsome bequest to the nation, by the late Lord Colborne, of eight really good pictures, has just been added to the National Gallery. Seven are hung together in the Centre Room; and the eighth ("a Shepherd, by Spagnoletto) is made a companion to the full-length of "St. John in the Wilderness," by Caracci. The centre of the seven is Wilkie's well-known "Parish Beadle"—so admirably engraved by Raimbach. This fine picture was painted for Lord Colborne in the year 1823—immediately after the completion of the "Chelsea Pensioners," for the Duke of Wellington. The price was 350 guineas; and it is now worth at least four times that sum. On its left is a capital Teniers—"Players at Trio-trac;" painted with a firm pencil, and a hand that had seldom recourse to repeated touches. In every respect, this is an excellent example of the master, and an accession of moment to the National Collection. On the right of the Wilkie, a small Bergheim "Crossing the Ford," and above the Berghem, a small Vandermeer—a Moonlight: only average specimens of both masters. A Weenix—"Dead Game and Dogs"—is suspended above the Wilkie; while the whole group is supported by two Rembrandts of great merit—"Portrait of an Old Man," and "Portrait of a Girl:" the latter in one of Rembrandt's best moods—a mood, moreover, in which he is not seen in any other picture in the National Collection. Of the style in which the old man is painted, Sir George Beaumont's Jew is a finer example.

An unusual occurrence in literature will change proprietors before the month. Two sets of the three first editions of Shakspeare will change proprietors under the hammer of Messrs. Sotheby and Wilkinson. One copy of the first edition of 1623 is the finest ever offered for sale. It belonged to Mr. Hibbert, and then to Mr. Wilks. Russia will have no effect on the price to be obtained for so choice a treasure.

Messrs. Christie and Manson have had some choice modern English pictures on view during the present week. Mr. Goodall's "Raising the Maypole," his best work, formed the centre of the room, flanked on either stone by a fine Müller, the "Acropolis of Athens;" and a very fine Callcott, "Hampstead Heath." An early Etty, the "Head of a Lady," in oval, painted in Lawrence's style, but with a surer pencil, found, as it deserved to find, many admirers. The sale was to take place to-day (Saturday).

The new Mayor of Oxford (Mr. Spiers) is properly ambitious of showing that a taste for literature and the arts is not wholly confined to the heads of houses; that the members of the Corporation of Oxford, if they do not understand books and pictures with University skill, are, at least, anxious to show their sympathy with authors and artists. With this view, and this feeling, the Mayor and Mayoress have issued cards for a grand gathering at Oxford on the 22nd; and London, it is said, will respond promptly and honorably to the Mayor's invitation. The present Vice-Chancellor will, we trust, show more sympathy with the Mayor's meeting than a former Vice-Chancellor showed for Shakspeare's House, and Mr. Macready's reading of "Hamlet."

Sir Francis Palgrave has just presented to Parliament his annual Report as Deputy Keeper of the Public Records. It contains some points of importance to authors and antiquaries. The arrangements, we are glad to learn, for the admission of literary inquirers, continue to work satisfactorily, though the time of several officers is necessarily taken up in attending to their researches. The new General Record Depository is hastening towards completion; the Commissioners of Works being at the same time desirous of finishing the building and of obtaining possession of Carlton Ride for other than Record purposes. The principal additions to the collection during the past year have been made, we observe, by the Treasury.

One of the choicest ivory caskets of mediæval workmanship preserved in this country was sold on Friday (yesterday), by Messrs. Sotheby and Wilkinson. It belonged to the late Mr. Stevenson, of Norwich; is of fourteenth century work, and contains on its lid and sides stories from the romance of Lancelot. This beautiful casket is the well known to the fellows of the Society of Antiquaries, and to the members of the Archæological Institute and British Archæological Association. The sale occurred too late in the week for a record of the price at which it sells in our columns of to-day.

A London Committee has just been formed in aid of the Edinburgh statue of Professor Wilson. The Committee consists of the Duke of Buccleuch, Lord Haddington, Mr. Macaulay, Mr. Stirling, M.P., Mr. Murray (of Albemarle-street), Mr. Lockhart, Mr. Peter Cunningham, and others. The Duke of Buccleuch has subscribed £25. Subscriptions are received by Messrs. Coutts and Co., and by Mr. Cunningham, the honorary secretary.

We have great pleasure in confirming the statement made in our paper of last week about Dr. Waagen and the new office of Director of the National Gallery. The Doctor is here, not on a visit (as some of our contemporaries stated) to his Royal Highness Prince Albert; but on a visit (as we observed last week) to his friends Sir Charles and Lady Eastlake, and has no wish whatever to accept the office which idle gossip has assigned to him.

BAZAAR AT GORE HOUSE.—Her Majesty's Commissioners for the Exhibition of 1851 having granted the use of their beautiful estate for the purpose of a grand Bazaar in commemoration of the completion of the Consumption Hospital at Brompton, the committee of that institution are making active endeavours to ensure a most successful issue for the undertaking. Numerous donations of fancy work, paintings, drawings, minerals, &c., have been received within the last few days.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

During the whole of the week, great inactivity has prevailed in the market for all national securities; nevertheless, the amount of business done in it for Money has been tolerably good. The prices quoted have been comparatively trifling; indeed, the value of Consols had kept up remarkably well, considering the probable duration of the war in the East. On this latter point, however, opinions are much divided. Some of the *Bulls* contend that both Austria and Prussia are about to join the Western Powers to compel the evacuation of the Principalities; but the *Bears* hesitate not to say that such an alliance is wholly out of the question. What ever course events may take as regards the future, certain it is that, with an enormous drain upon our resources, we have Consols at almost a peace point; and where they are likely to continue for some time. The fact is, the late fall in the quotations was more the result of speculative than *bond fide* sales of stock.

On Monday, National Stocks were dull and drooping. The Three per Cent. Reduced marked 91¾; the New Three-and-a-Quarter per Cents. 91¼; and Consols for Account, 91⅝ to 91½. Exchequer Bills were done at 16s to 14s; Ditto, Small, 1s to 3s; and Exchequer Bonds (Scrip), ¾ prem. The transactions, on Tuesday, were wholly devoid of interest. The Three per Cents Reduced sold at 91⅝; the New Three and-a-Quarter per Cents, 91⅝ to 91¾; and Consols for Account, 91¾. Long Annuities, 1860, were 8 9-16ths. India Bonds, 48 prem. to par. Exchequer Bills, 4s prem. to par; Exchequer Bonds (Scrip), ½ to ¾ prem. Business on the following day, ruled inactive; yet prices were tolerably firm. Bank Stock, 208; the Three per Cents, Reduced, realised 91⅝ ⅞; Consols for Account, 91¾; and the New Three-and-a-Quarter per Cents, 91⅞ 92 to 91⅞. Exchequer Bills, £500, par to 2s. prem. and Exchequer Bonds (Scrip), ¾ prem. On Thursday, a very dull market was experienced. Consols, for opening were 91⅝ to ⅞ ex div.; the Three per Cents, Reduced, 91⅝; and the New Three-and-a-Quarter per Cents, 91⅝ ¾. Exchequer Bills, par to 4s. prem.

There have been very few transactions noticed in the Foreign-house, yet the quotations have ruled steady. The following are the leading prices:—Brazilian Five per Cents, Small, 98; Chilian Six per Cents, 103; Ecuador Bonds, 2¾; Mexican Three per Cents, 24¼; Russian Five per Cents, 110; Ditto, Four-and-a-Half per Cents, 85½; Venezuela Three-and-a-Half per Cents, 24¾; Dutch Two-and-a-Half per Cents, 60¾; Dutch Four per Cents, 96¾; Ditto Four per Cents, New, 96¾; Belgian Four per Cents, 91¾; and Portuguese and Spanish Bonds, as last quoted.

Joint-Stock Bank Shares have sold inactively, and prices have shown a tendency to decline. Australia have sold at 21; Colonial, 74; Commercial of London, 14; London Chartered of Australia, 21; Oriental, 47½; Union of Australia, 70. In Miscellaneous Securities, comparatively few investments have been made. Australian Agricultural have marked 44¾; Crystal Palace, 6¾; Ditto, New B Shares, 2¼; London Docks, 108½; North British Australasian, 2¼; Peel River Land and Mineral, 4¾; Peninsula and Oriental Steam, 46; Ditto, New, 8¼; South Australian Land, 37¾; Scottish Australian Investment, 2¾; Van Diemen's Land, 12. Railway Shares have ranged thus:—Berlin, 1¾; East London, 12½; Grand Junction, 73; Ditto, New, 17; Kent, 87; Lambeth, 57; Southwark and Vauxhall, 83½; West Middlesex New, 11¾. Insurance Companies have been tolerably firm. Albion have sold at 90; County, 125; European, 19¾; Globe, 127; Guardian, 57; London, 28¾; Palladium, 2¾; Pelican, 8¾; Provident, 2¾; Royal Exchange, 185; Sun Fire, 260; Ditto, Life, 6; Hungerford-bridge Shares have been 12; Waterloo, 4¾ to 5; Waterloo Old Annuities, of £8, 23; Vauxhall, 21.

The imports of bullion have been on an extensive scale—£300,000 having arrived from Australia, £70,000 in dollars from New York, 300,000 dollars from Mexico, and 60,000 dollars from other quarters. The shipments have been very moderate; but an improved demand for gold has sprung up within the last few days for shipment to the Continent. It is probable, therefore, that most of the gold reported above will be sent to France; and we learn that heavy purchases of silver are likely to be made for China, where the dollar has again considerably advanced in price.

The last returns of the Bank of France show a further augmentation in the stock of bullion of £2,400,000. The total supply is now £18,896,000 There has been a moderate demand for money. In the rates of discount no change has taken place.

On the whole, the Railway Share-market has been dull. Prices almost generally have given way; but the fall has not occasioned any feeling of uneasiness. The following are the official closing prices on Saturday:—

ORDINARY SHARES.—STOCKS.—Ambergate, Nottingham, and Boston Junction, 6¾; Bristol and Exeter, 86¾; Caledonian, 58¾; Eastern Counties, 10¾; East Lancashire, 61; Edinburgh and Glasgow, 81½; Edinburgh, Perth, and Dundee, 75; Great Northern, 90¾; Ditto, A Stock, 70¾; Great Western, 77; Lancashire and Yorkshire, 62¾; London and Blackwall, 8¾; London, Tilbury, and Southend, 8¾; London and Brighton, 103¾; London and North-Western, 99¾; London and South Western, 84; Midland, 62¾; Ditto, Birmingham and Derby, 58; North British, 33¾; North Staffordshire, 10¾; Shropshire Union, 7¾; South-Eastern, 62¾; York, Newcastle, and Berwick, 70¾; Ditto, Extension, 12¾; York and North Midland, 51¾.

LINES LEASED AT FIXED RENTALS.—Buckinghamshire, 96 : Hull and Selby, 104.

PREFERENCE SHARES.—Great Northern Four-and-a-Half per Cent, 104; Great Western 'Four-and-a-half per Cent, 97; Midland Four and-a-Half per Cent, 1st dis., Norfolk Four per Cent, 90; North British, 97; Oxford, Worcester, and Wolverhampton, 102¾.

FOREIGN.—Great Western of Brazils Shares, 19; Luxembourg Constituted Shares, 2; Namur and Liege, 8; Northern of France £20 Shares, 18; Paris and Lyons, 27; and Paris and Strasbourg, 31¾

All Mining Shares have been dull and drooping. On Thursday Agua Frias were 8; Anglo-Californis, ¼; St. John del Rey, 31; Colonial Gold, ⅛; Maraquita, ¼; Nouveau Monde, ¼; Quartz Rock, ½ to ⅝; Santiago de Cuba, 4; South Australian, ⅛.

Friday Evening.

There has been a very inactive market for Consols to-day, and prices have tended downwards. The Three per Cents have been done at 91 to 91⅛; the Three per Cents Reduced, 91¼ to 91⅜; and the New Three-and-a-Quarter per Cents, 91⅝ ⅞. In Foreign Bonds and Railway Shares, very little doing.

THE MARKETS.

CORN EXCHANGE (Friday).—The quantity of English wheat [illegible] this day, notwithstanding [illegible] and the arrivals [illegible] the week [illegible] were [illegible] the week [illegible] the week [illegible] the week

THE WELLINGTON TESTIMONIAL CLOCK-TOWER, LONDON-BRIDGE, SOUTHWARK.—(SEE PRECEDING PAGE.)

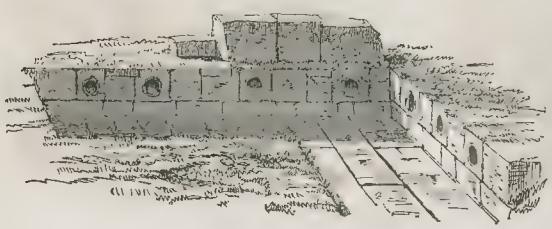
and the immense accumulation of rubbish, varying in depth from two to twelve feet, would startle the most enthusiastic antiquary, or the most determined explorer of our national antiquities. But the work at Fountains is planned and carried on with unflinching spirit. The "iron road" is laid down through the sombre aisles, into the sacred sanctuary that for three centuries glittered with all the pomp of the Romish Church. The soil is quietly and quickly removed; and the rich relics of architecture, the fragments of the "painted pavement," and the shattered tombs of its old lords and patrons once more see the light of day.

HOLY-WATER STOUP

SHIELD

At a recent meeting of the Royal Institute of British Architects—the Earl de Grey, President, in the chair—his Lordship exhibited several casts and original objects brought from Fountains Abbey. There was also an interesting discussion on the probable use of some curious earthenware jars, imbedded in the base wall of a screen in the nave. These jars were laid in mortar, on their sides, and then surrounded with the solid stone-work; the necks protruding from the wall like cannons from the sides of a ship. (*See Illustration.*) Their probable use has been the subject of much conjecture.

The other objects exhibited were:—A cast of an Early English Holy-water Stoup, which was carried away from the Abbey many years ago, and now used as the Font in the Chapel of Aldfield, a mile from the ruins. The original is cut out of a solid block of "Nidderdale marble." The date is *circa* 1230. Next we have illustrated a simple and beautiful Early English bracket, from the gateway of the Abbey; the cast of a female martyr saint (probably St. Margaret) bearing the "martyr's palm and golden crown," from the tower at Fountains—date about 1500. Beneath is an original sculpture in alabaster of the Assumption of the Virgin; this has been richly coloured and gilt. Some



PORTION OF VESSELS FOUND AT FOUNTAINS ABBEY.

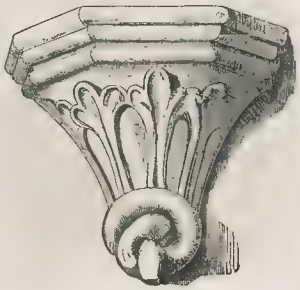
FEMALE MARTYR SAINT

perforated plates of lead—curious objects of the Decorated period—Professor Willis informs us, had been ventilators, inserted in Church and other windows of the middle ages, when needed. Next was a cast of a shield bearing the initials M. H., and crosier and mitre of Abbot Marmaduke Huby (1494–1526)—the Wykeham of the Abbey—the builder of the tower, and many other important structures.

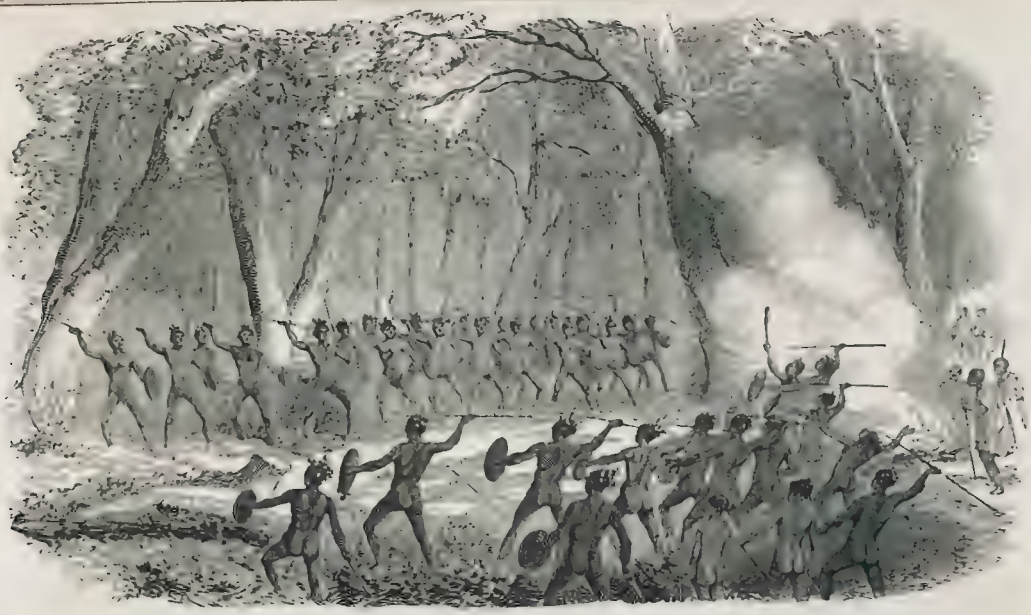
We understand that Lord de Grey, having granted permission to Mr. Harrison, of Ripon, to search for the old Norman choir of the Abbey,

THE ASSUMPTION.

the base has been discovered, in most instances, scarcely two inches below the present sward. It proves to have been very similar to the choir o. Kirkstall Abbey: without side aisles, and only about thirty-five feet in length from the eastern piers of the *original* centre tower. The present glorious Choir and Lady Chapel—a fine example of Early English architecture—was built between 1204 and 1246.



BRACKET, EARLY ENGLISH.



AFFRAY OF ABORIGINAL TRIBES, THREE MILES FROM BRISBANE, NEW SOUTH WALES.

ABORIGINAL AFFRAY IN NEW SOUTH WALES.

It is curious to find among the latest intelligence from this colony, the co-existence of two very opposite extremes of civilisation almost upon the same spot—namely, the advanced state indicated by the publication of a local newspaper, amid the sanguinary feuds of the aboriginal tribes of the country, rendering it of some importance that we should, in the words of our Correspondent, bring under the notice of the English public the barbarism amidst which the colonists live in the present days of high civilisation in New South Wales.

It appears from the *Moreton Bay Free Press*, published at Brisbane, that on December 21 last one of those barbarous and disgraceful scenes was enacted among some of the aborigines which are usually termed a war of fight; but which should rather be looked upon as among the superstitious ceremonies of a race of which very little is known. The scene of the conflict was a fine green flat, about a mile beyond Barnett's Swamp; and here, on the afternoon of the above day, were assembled a number of blacks of the Amity Point, Logan, Brisbane Island, and Ningy-Ningy tribes—the former being opposed to the two latter, in all they amounted to about one hundred and fifty men, women, and children. The cause of the quarrel was a Logan black named Harry, having stolen a gin or female of one of the opposite tribes. The battle commenced by her father running at Harry with a sharp hole, about half a foot in length. The latter was armed with a similar instrument and, locked in each other's arms, a most sanguinary conflict ensued, in the course of which both parties received some very severe stabs in the back and about the ribs. A parley ensued with the *gubby* and *woman* then took place along the hostile lines, ending with a grand melee in which the spears and boomerangs flew about with great rapidity; and, in the course of which the blacks displayed great tact in the use of their small shields. At last the Amity Point and Logan Blacks were routed; they were much less numerous than the others; and it was then discovered that one of the Brisbane Islanders was killed. The poor fellow had received a spear through the right breast, it entered near the arm pit and must have penetrated the right lung, for he died within ten minutes of receiving the wound. The warriors were all hideously bedaubed with red and yellow ochre; their hair frizzled out and ornamented with parrots and other feathers. During the fight, the old women of the tribe decorated in a somewhat similar manner, stood round a fire chanting or intoning, in a most monotonous manner, altogether it reminded one of the incantation scene in "Macbeth." When the fight of the blacks was discovered, the tribe set up a most unearthly yell, and beat their heads meantime with their waddies. The deceased was the brother of Dhamond, who was employed for some time in the Customs boat; but on no account could the blacks be induced to pronounce his name after his decease.

The savage conflict led to a similar affray a few days afterwards, at Logan, in which as before, the Amity Point and Logan tribes were opposed to those of the Ningy-Ningy and Bribie's Island. The writer adds that the fight of Dec 21 was followed by the revolting practice of cannibalism, for the black who was killed in the above affray was roasted and eaten, and this horrible feast was perpetrated within three miles of Brisbane.

We agree with the writer in the *Brisbane Free Press*, that it is the imperative duty of the Government to step in, and at any rate *endeavour* to put a stop to a murderous practice; one of the remnants of that barbarism which sixty-six years of active occupation of the country by Europeans has not been able to efface, and which must contribute to the extermination of a race that, like the red man of the American continent, originally the lord and owner of the soil, is rapidly disappearing before the advancing strides of civilisation. We are aware that there are persons so set to every just and generous feeling as to argue that the natives should be allowed to settle the matter in their own barbarous ways; but it must be recollected that the European having secured to himself the lands of the aborigines the least return he can make is to bestow on them the benefits of that civilisation which is the white man's proudest boast, and which has been the means of enabling him to render subservient to his power and will his sable brethren wherever he has found them. Now, amongst these benefits should be the repression of the meaningless feuds that frequently terminate in such murderous scenes as the one which we have described. It has been said that it is useless to endeavour to put a step to these con-

PRESENTATION OF A GOLD VASE, AT MELBOURNE, TO THE LIEUTENANT-GOVERNOR OF VICTORIA.—(SEE NEXT PAGE.)

flicts, because, though prevented in one place, the blacks would but remove further on, out of the reach of the authorities, to indulge in their murderous work. Now, this we do not credit; and even granting it were so, it neither excuses nor relieves a Christian Government from the duty of making the attempt

TESTIMONIAL TO THE LIEUTENANT-GOVERNOR OF VICTORIA.

By the last Australian mail we have been favoured with some interesting particulars of a grand farewell entertainment given by the citizens of Melbourne, as a parting token of esteem, to Mr. La Trobe, Lieutenant-Governor, whose able administration has rendered him highly popular throughout the Colony.

In Lonsdale-street, Melbourne, were prepared a ball-room, 315 feet long by 45 feet wide, and a supper-room of like width, and 170 feet in length. The whole was superbly decorated; and the exterior façade of the building was illuminated with coloured lamps, in the "Star of Brunswick," and other devices.

The company included, besides the highest Government officers, many members of the Legislative Council, the Judges, the most distinguished members of the bar, and, indeed, the greater part of the more wealthy and educated classes of society.

His Excellency arrived about half-past nine, accompanied by a brilliant staff of officers of the 40th and 99th Regiments, and of her Majesty's steamer *Electra*. Dancing proceeded with great vigour throughout the evening, and nearly 2000 persons were present.

During the evening, a superb Vase, which had been made for the occasion, was presented to his Excellency, as a parting memorial of friendship and regard. The Vase was manufactured in the colony, entirely of Victorian gold. It weighs 170 oz., and cost £1090. The ornamentation has been suggested by those occupations whence has arisen the great wealth of the colony.

The presentation took place at the south end of the dancing-hall, where, upon a dais, was seated his Excellency, surrounded by the members of the Executive Council and his numerous suite. The Honourable the Speaker, accompanied by the Mayor and numerous members of the committee, having approached, the Speaker presented the Vase to his Excellency; accompanying the ceremony by a valedictory address, wherein he stated the superb gift to be of native gold, manufactured by native talent.

His Excellency immediately rose, and gracefully accepted the Vase. His feelings were evidently much excited by the kindly sentiments expressed towards him by the Speaker. His Excellency, having replied, retired with a large portion of the company to the supper-room. The only toasts given were "Her Majesty the Queen," proposed by the Speaker; and "His Excellency the Lieutenant-Governor," proposed by the Mayor. These were drunk with loyal enthusiasm. The company resumed dancing, and the enjoyments of the ball were prolonged until about five o'clock next morning. The orchestra numbered 100 performers, ably conducted by the Bandmaster of the 40th Regiment.

MUSIC.

GRISI'S farewell performances continue to draw immense houses to the ROYAL ITALIAN OPERA. She has repeated *Norma* and *Lucrezia Borgia* with undiminished éclat, and her appearance in the "Huguenots" is announced for this evening. Since the first performance of the "Prophète," last week, it has been twice repeated. The attraction of this gorgeous opera, aided by Madame Viardot's beautiful performance of the character of *Fides*, appears to be as great as ever.

THE Drury-lane ROYAL OPERA has brought forward an interesting novelty, the "Entführung aus dem Serail" of Mozart; an opera which, notwithstanding its great celebrity, is almost unknown in this country. An English version of it was produced about five-and-twenty years ago, at the English Opera-house, now the Lyceum; but it was so deformed by interpolations, omissions, and changes, that it could hardly be called Mozart's piece, and so indifferently performed that it made no impression on the public. It was produced in its original shape by the German Company, of which Staudigl was a member, when he first visited England; but that Company (with the exception of this great performer) was a very weak one, and their proceedings obtained little notice. The present revival of this opera at Drury-lane may, therefore, be regarded as equivalent to the production of a new work. The "Seraglio" was an early production of Mozart; immediately succeeding his first great work, "Idomeneo." At that period, so near the beginning of his career, Mozart's style resembled, in many respects, that of the Italian school of his day, before his music had acquired that German nationality and essentially dramatic character which are so apparent in "Figaro," "Don Giovanni," and the "Zauberflöte." In the "Seraglio," the Italian forms are preserved, the airs being lengthened by repetitions, and garnished with divisions, roulades, and florid ornamental passages, calculated less for dramatic effect than for displaying the vocal powers of a favourite singer. These Italian mannerisms detract greatly from the excellence of this opera; but then they are mingled with so many beauties, so many indications of the *mens divinior* -even then striving to free itself from the trammels of education and habit—so many traits of genius and feeling, that the music, on the whole, must be deemed worthy of its immortal author. The libretto is a light and pleasant little drama, very simple in its plot and incidents, but not without interest. The subject turns upon the fortunes of a young pair of Italian lovers. *Constance* has been taken by pirates, sold to a Pacha, and immured in his seraglio. *Belmonte*, discovering her situation, gets access to the place of her captivity, with the view of effecting her rescue. These are the sentimental characters. There are likewise a comic pair of lovers: *Pedrillo, Belmonte's* servant; and *Blonda, Constance's* waiting-woman, who are their master and mistress's fellow-prisoners. Their attempts to escape, thwarted by the jealous watchfulness of a ridiculous old Turk, the Pacha's major-domo, forms the plot of the piece. Their flight is intercepted, and they are brought before the irritated Pacha; who, however, is magnanimous enough to conquer his passion for his fair captive, whom he allows to depart with her lover. The music is beautiful. Mozart's genius was sufficient to impart a charm even to the Italian mannerisms of his day. The airs of the heroine—which were written expressly for a favourite singer then on the Vienna stage—are of a most brilliant description, demanding immense powers of voice and execution; but they are far from being merely pieces of display. Mozart often makes the most rapid roulades and diversions, and flights to the highest regions of the scale, serve to express violent agitation and passion. There are, moreover, multitudes of simple passages, in the songs of the lovers, which breathe the very soul of tenderness. The more comic portion of the music is often very light and playful; and the concerted pieces, in which the most busy scenes are carried on, are full of rich and beautiful harmonies. High praise is due to the performance of this delightful opera. Madame Rudersdorff, in the character of the heroine, left nothing to be desired. As an actress, she was graceful and intelligent; while she conquered the greatest vocal difficulties with the ease and finish of a consummate artist. Mdlle. Bury was a lively and agreeable *soubrette*, and sang very prettily. The part of *Osmin* demands an excellent comedian, as well as a singer of extraordinary powers—requisites which were united in Formès. The other characters were respectably supported; and the whole performance was received with the applause which it so justly deserved.

THE FRENCH company at the ST. JAMES'S THEATRE have brought out another *opéra comique*, "La Promise," recently produced with success at the Parisian Théâtre Lyrique. The music is by Clapisson, a composer who has gained considerable popularity as the author of many light musical pieces. He has an easy, fluent style, with little originality or strength, and resembles Auber, without Auber's higher qualities as an artist; but his music is generally gay and agreeable—all that is required for the pieces on which he employs himself. Such a piece is "La Promise." It is a lively picture of the manners and habits of French sailors, their sweethearts, *douaniers*, and other inhabitants of a small sea-port; and the best part of the music consists of nautical ditties which have a good deal of character, though amusingly unlike our John Bull seasongs. The airs written for Madame Cabel are quite adapted to that lady's peculiar style of singing, being filled with those florid and ornate passages which display to the greatest advantage her clear, flexible voice and brilliant execution. The piece, in short, is a trifle, but yet it is worth hearing, as it is very well performed, and put upon the stage with great taste and neatness. But we desiderate something of a higher stamp and more substantial character.

THE ENGLISH GLEE AND MADRIGAL UNION have resumed their performances at Willis's Rooms. The members of this association are, Mrs. Enderohn, Mrs. Lockey (late Miss Martha Williams); Mr. Lockey, Mr. Hobbs, and Mr. H. Phillips. For the performance of madrigals and full pieces they have the assistance of a considerable body of additional voices, all well chosen and thoroughly competent. At their first concert, on Monday last, they performed a selection of the fine old madrigals of the sixteenth and seventeenth centuries, and of the glees and part-songs of the more modern English composers. All these pieces were sung with the most exquisite purity and beauty, and warmly applauded by a large and fashionable audience.

THERE was a perform ance by the HARMONIC UNION, at Exeter-hall, on Wednesday evening, in aid of the funds of the German Hospital. It consisted of an oratorio, entitled "Christ the Messenger of Peace," composed by M. Naumann, and performed for the first time in this country. As far as can be gathered from a single hearing, and a somewhat indifferent performance, it appears to be a work of considerable merit, by no means remarkable for originality, but written in the plain, solid, grave style which befits so sacred a subject. No less than four of the principal singers who had been engaged for this performance—Mdlle Agnes Bury, Herr Reichart, Herr Hölzel, and Herr Formès—failed to make their appearance, and their places were filled by other performers, obtained at the shortest notice, and necessarily unprepared—a circumstance which demands explanation.

MISS ARABELLA GODDARD'S ANNUAL CONCERT will be given on Wednesday evening, at the Hanover-square Rooms.

LYCEUM THEATRE.—Madame Vestris, after a long absence, returned to this stage on Monday, and signalised the occasion by successfully competing with Madame Allan in the part of the Mother, in the celebrated drama lately played at the St. James's, under the title of "La Joie fait Peur." The character of the old Steward—so finely acted by M. Regnier—was undertaken by Mr. Frank Matthews. Little of the original effect was wanting in the performance of the English version of an admirable French production, which, in its new garb, is appropriately named "Sunshine through Clouds." The house was full.

NATIONAL SPORTS.

ASCOT HEATH RACES.—TUESDAY.

Various causes contributed to render the opening of the Royal Meeting on Ascot Heath less brilliant this year than usual. The weather, that relentless spoil-sport, was so unfavourable that it must have hindered many people from venturing abroad for pleasure's sake alone; and it was also known that her Majesty would not honour the meeting with her presence on the first day. Under these circumstances we were not surprised to find that the attendance had fallen off in numbers, though not in respectability. Although the rain had diminished the attendance, it had the effect of putting the course in the best possible condition. Shortly before three o'clock the weather cleared up a little, but the day never became quite fine until towards the close of the racing, when the sun shone forth with a watery smile, that reminded us more of showery April than glowing June. The afternoon's sport came off as follows:—

Trial Stakes.—Crossbones, 1. Filbert, 2.
Welcome Stakes.—Bribery, 1. Weathercock, 2.
Sweepstakes of 50 Sovs.—Corebus, 1. Namur, 2.

Her Majesty's Gold Vase.—Hermit, 1. Rataplan, 2. Betting: 5 to 2 on Hermit. When the flag was dropped, Hermit walked off, followed by Rataplan. After proceeding about three hundred yards, Hermit ventured upon a gentle trot, and so they went on until they arrived at the foot of Swinley Hill, when a canter was passed; and after entering the Old Mile Course, the pace was gradually improved, until the race began in earnest. Hermit then made strong play, and at last won easily by a length and a half.

First Year of the Sixth Ascot Triennial Stakes.—The Bonnie Morn, 1. Joshua, 2.

Ascot Stakes.—Little Harry, 1. Grapeshot, 2. Betting: 10 to 1 agst Little Harry, and 20 to 1 agst Grapeshot.

Ascot Derby Stakes.—Phaëton, 1. Bobby, 2. Betting: 3 to 1 agst Bobby; 4 to 1 agst Phaëton

WEDNESDAY.

The Wednesday at Ascot has always been considered an "off day"—we speak not of the sport, for that was excellent; but of the general company, which was very limited, notwithstanding the fineness of the weather. The highway enjoyed a holiday, and the railways had an easy time of it; a few private carriages rattled through Windsor in the course of the forenoon, but the public vehicles, coaches, omnibuses, and cars, were more abundant than fares. Seven races invited the lovers of sport to the Heath; and thus they came off:—

Coronation Stakes.—Mishap, 1. Delia, 2.
Fernhill Stakes.—Bessie walked over.
Hardicap Plate of 100 sovs.—John O'Bruges, 1. Calamus, 2.
Royal Hunt Cup.—Brocket, 1. King of Trumps, 2. C. by the Emperor, 3. Alembic, 4. Twenty-two started. Betting:—2 to 1 agst Alembic, 10 to 1 agst Brocket and C. by the Emperor, and 20 to 1 agst King of Trumps.

Second Year of the Fifth Ascot Triennial Stakes.—Meteora, 1. Chamfaere, 2.

Third Year of the Fourth Ascot Triennial Stakes.—West Australian, 1. Vanderdecken, 2. Lord Exeter's Filbert, 3.

Sweepstakes of 15 sovs.—Delia, 1. Cranbourne, 2.

THURSDAY.

St. James's Palace Stakes.—Baalbec, 1. Prince Arthur, 2.
Visitors' Plate.—Jujube, 1. Little Jack, 2.
Gold Cup.—West Australian, 1. Kingston, 2.
New Stakes.—Mowpy, 1. Border Chief, 2.
Windsor Castle Stakes.—Hospodar, 1. Balmoral, 2.
Sweepstakes of 50 sovs.—Boer, 1. Pelham, 2.
Windsor Forest Stakes.—Meteora walked over.

The morning was heavy and drizzly; but cleared up before her Majesty and the Royal suite reached the Heath.

FRIDAY.

Sweepstakes of 50 sovs.—Epaminondas, 1. Weathercock, 2.
First Class Wokingham Stakes.—Bobbyhorse, 1. Octavia, 2.
Queen's Guineas.—Rataplan, 1. Epaminondas, 2.
Second Class Wokingham.—Brocket, 1. Inder, 2.
Maiden Plate.—Little Tom, 1. Vicotine, 2.
Sweepstakes of 20 sovs.—Bonne Morn walked over.
Great Western Stakes.—Dans walked over, after a dead heat with Kentyside Hero.

NEXT WEEK'S RACES.—Two meetings take place during the week: the one being the Newcastle-on-Tyne, on Tuesday, Wednesday, and Thursday; and the other the Hampton, on Wednesday and Thursday the latter being a sort of minor "Derby" for the middling and working classes of the metropolis and, being held near Wales's "Olden Palace" of Hampton-court, should the weather prove favourable, will no doubt attract a very large assemblage of pleasure seekers.

REFORMS IN DRESS AND ACCOUTREMENTS.—It is said that a frock-coat will soon be approved and taken into use by our troops as a substitute for the narrow coat and the cutting coatee now worn by our soldiers. The swords now being sent to Turkey for the use of our light cavalry are considered by experienced soldiers very much more efficient in the hands of a good swordsman than the one now in use. It is lighter and two inches longer, with a better protection for the hand, after the plan of the Highland claymore.

THE BLACK SEA FLEET OPERATIONS.

WE have been favoured by a Correspondent, of well-known artistic skill, with the accompanying three Sketches of the most recent operations of the Black Sea Fleet, engraved upon page 576

The first Sketch shows H.M.S. *Agamemnon* taking a survey of Sebastopol, and laying out a bait for the Russian squadron on April 29. The scene is life-like; but the two accompanying scenes possess more active interest. The lower Illustration shows the bombardment and capture of Redout Kaleh, on May 19. In the middle Sketch, the barning of the Redout, is seen part of the bridge of boats which was cut away by the Russians, and was picked up by the boats of the *Agamemnon*. The action is detailed in the following letter from a Correspondent:—

"On the afternoon of May 18th, one of the strongest and most important holds of the Russians on the east coast of the Black Sea, was annihilated by the combined French and English flying squadron, under the command of Rear-Admiral Sir Edward Lyons, G.C.B. On the previous day the gallant Admiral had taken an accurate glimpse at the place, and doubtless judging it useless to destroy the fort without occupying the town, proceeded to the Turkish camp at Tchurakseo to procure some troops. The Commander-in-Chief being absent at the time, no answer could be given to the demand till the following morning. It appears that the same demand had been made at an encampment further up the coast; but, as it was impossible to get a decided answer, the Admiral, with his keen discernment, seeing an opportunity of placing in the hands of Turkey so important a place, would not waste time, and promptly gave orders to the ships to proceed. On the morning of the 19th, at eight o'clock, the "pipe" was made "out boats," signifying a favourable answer, and everything betokened work to be done. By half-past eleven a.m., 800 Turkish troops, with four field-pieces, ammunition, tents, provisions, &c., had been taken on board, when the squadron got under way. The sea being calm the voyage was soon performed, though the *Agamemnon* was obliged to go at slow speed, for fear of swamping three gun-boats which she had in tow. At a quarter to four p.m., the ships had arrived off the town, the flag-ship being in advance, when a boat, bearing a flag of truce, under the care of Lieut. Maxor and — Elcock, Esq. (an officer some time in the Russian service), proceeded on shore, demanding the forts to be given up, and the town evacuated, as

PLAN OF THE BOMBARDMENT AND CAPTURE OF REDOUT KALEH.

it was the wish of the Admiral not to sacrifice life; and, at the same time, stating that an answer must be given within ten minutes, or to abide the consequence. On the boat nearing the place, she was hailed toward the fort, when several Russian officers made their appearance on the parapet. On the official orders being made known to them, they made excuses, on the ground of the shortness of the time allowed, and that their General was some distance off. In the meantime, the officers and crew of the boat observed that the guns of the fort were manned, and all ready for action. The time having elapsed, and no decided answer given, *Agamemnon* began to take up her place, the *Charlemagne* following; while the *Highflyer*, *Mocador*, and *Samson* kept more to starboard, to protect the landing of the troops. At 5.12 the first gun was fired from the bow of the *Agamemnon*, being followed closely by broadside guns of shell and shot, which were fired with great precision; while the fort on left side of the river was observed to open fire. At this time smoke was seen issuing behind the wood, and it was evident that the place was on fire—which was, doubtless, solely caused by the Russians themselves, who, alarmed at the warmness of the cannonading, retreated, firing all in their way. The Turkish troops, in the meantime, were landed to the south, under cover of the steamers, and, in a short time, were seen to be in possession of the fort. All endeavours were made to stop the fire, but to no purpose: and at night it raged with great fury, illuminating the sky, and giving, doubtless, to their camp the

MR. J. T. COOPER begs to announce that he continues to give LESSONS on the PIANOFORTE and SINGING (Ladies' Colleges attended.—16, St. Mary's-road, Canonbury.

CRYSTAL PALACE.—WHERE is FUTURITY? This having been a subject of much inquiry, Messrs. Moses Finlayson and Co. to acquaint the Nobility and Gentry that they have not any Establishment in the Crystal Palace, and the reason is, that they supplied so many of the Exhibitors at the Exhibition of 1851, as well as at those of Dublin and New York. It must, therefore, be obvious to all that, were they to become Exhibitors, it would be opposing some of their largest consumers. Many of their Patents, Registered Articles, and other Manufactures, are supplied to the Trade Retailers, at the Crystal Palace or of Messrs Finlayson and Co.'s Manufactory and Wholesale Warehouse, 49, 50, 51, and 52, Bunhill-row, 11, Beak-street; 38 and 39, Silver-street, and 84, Red Lion-street, Paris.

OPENING of the CRYSTAL PALACE.—CALLAGHAN'S CRYSTAL PALACE PERSPECTIVE GLASSES, indispensable to all visitors. These extraordinary little glasses (introduced at the Exhibition of 1851), though scarcely larger than a watch, possess such wonderful power and clearness as to show objects distinctly at the distance of a mile. Not only will they be found invaluable for viewing the interior of the Crystal Palace, but also for the magnificent scenery of the surrounding country. Price 12s. 6d. each. To be had of the appointed agents, Mr. Sams's Library, 1, St. James's-street; Mitchell's, 39, Old Bond-street; Westerton's, Hyde-park-corner; Keith, Prowse, and Co., 48, Cheapside; and at the Booksellers at the Railway Stations generally, or will be sent, post free, on receipt of stamps or money order, payable to William Callaghan, Opticlan, 63, Great Russell-street, Bloomsbury, London.

PARIS EXHIBITION of 1855.—METROPOLITAN TRADE MEETINGS.—The Lords of her Majesty's Privy Council for Trade, being desirous that the Offence charged with the preliminary arrangements for the PARIS EXHIBITION should have the assistance of a few gentlemen practically conversant with each of the most important branches of trade carried on in the Metropolis, before all persons engaged in the undertaking are finally selected, and who may be interested in the Exhibition, to assemble at MARLBOROUGH HOUSE, on the days hereafter mentioned, for the purpose of hearing any observations they may be disposed to make and to name the persons who may be appointed as assistants, if required.

The Meetings to take place place punctually at Eleven o'Clock each day.

Philosophical Instrument Makers on Monday, June 19.
Musical Instrument Makers on Tuesday, June 20.
Manufacturers of Hardware, Pewterers, and Brassfounders—on Wednesday, June 21.
Saddlers and Harness Makers—on Thursday, June 22.
Tanners, Curriers, and Leather Dressers—on Friday, June 23.
Farriers—on Saturday, June 24.
Notice of other Meetings will appear hereafter.
By order, HENRY C. OWEN, Capt. R.E.
Marlborough House, Pall-mall, June 14th, 1854.

MAYALL'S PORTRAIT GALLERIES, 224, Regent-street, and 433, West Strand. DAGUERREOTYPE PORTRAITS, the most perfect style of Art, taste, and finish.—"Mr Mayall's portraits represent the high art of the Daguerreotype: they are as superior to the generality of such pictures as a delicate engraving is to a coarse woodcut."—Art Journal, Nov., 1853.

FIVE POUNDS.—Ladies and Gentlemen may learn in one hour to take PORTRAITS and LANDSCAPES, and may purchase the necessary Apparatus for Five Pounds, at the London School of Photography, 78, Newgate-street.

GEOLOGY and MINERALOGY.—Elementary Collections to facilitate the study of this interesting science, can be had, from Two Guineas to One Hundred, of J. TENNANT, Geologist, 149, Strand, London.

No. 25, OLD CAVENDISH-STREET, OXFORD-STREET.
COURSE of TWELVE THEORETICAL and PRACTICAL LECTURES on MAGNETOLOGY (Mesmerism) By C. J. A. RICARD, F.D.M., author of several scientific works member of several learned societies, and late Professor at the Athénée de Paris. These Lectures are now being delivered by A CLAIRVOYANTE SOMNAMBULIST, whose superior lucidity exceeds that of any other Somnambulist hitherto known in Europe.

SYNOPSIS OF THE LECTURES

1 Definition of Magnetology; its Principles, its Principles and Effects.
2. Physiology of the Somnambulist: Faculties pertaining thereto.
3 Natural and Magnetical Sleep Compared
4 Psychology with equal interest and sympathy. Each Lecture will be translated by Magnetical and Somnambulic Experiments
N.B.—The Professor will deliver his Lectures in the French Language, but will be assisted by a competent English translator.
No. 25, Old Cavendish-street, Oxford-street.

G. DOUGLAS SINGER, Secretary

FEMALE TEMPORARY HOME, Queen-street, Golden-square.
Treasurer—Sir John Dean Paul, Bart.
[Bankers—Messrs. Strahan, Paul, and Co., 216, Strand.
Sub-Treasurer—Lieut. John Blackmore, R.N., 37, Gloucester-place, Queen-square, Brompton.
This institution has a threefold object—
1. A benevolent enterprise, to into the Highways, and invite unhappy young women to accept the benefits of the Home.
2 Prevention. To afford temporary shelter and board for young women out of employ, which or without payment as the case may be, entitle, to prevent them falling into the snares which surround them in the streets of London.
3. For the higher class of females, unhappily very numerous, for whom no Institution has been hitherto made
Subscriptions and donations will be gratefully received by the Subscribers, and by their orders to be addressed to John Shaw Leeson, E.N., 37, Gloucester-place, Camden-town. Subscriptions and donations will also be received by the Bankers.
An occasional paper, called "London by Moonlight," is published, with a view to bring the objects of the Home, the interior of the premises that exist for such an Institution, the operations carried on towards meeting them, and to further the efficiency of the enterprise by soliciting contributions, personal support, &c. The printing and issuing these papers, while they have been productive of great good, have imposed considerable expense; it is therefore suggested, that, if the friends of the Institution would make a purchase of them for gratuitous distribution, the publicity and economy with which it is produced a twofold benefit—inasmuch as they would be making the Institution more extensively known, and, if not actually contributing to its funds, at least making a saving in the expenditure. The Numbers 1, 2, 3, 4, and 5, may be had at 2s. per hundred.
Any orders sent to Mr. Youngbrand, bookseller, 16, Eversholt-street, Camden-town; Mr. Shaw Leeson, Hon. Sec., 37, Gloucester-place; Messrs. Seeley, booksellers, Fleet-street; Mr J Shaw, Southampton-row, Russell-square; Mr. C. A. Johnson, 31, Kingsroad, Brighton, Messrs. Partridge, Oakey, and Co., Paternoster-row; Mr. J. Glover, Leamington; Mr. E. E. Johnson, 13, Soho-square, will be punctually attended to.

NEW READING CASES for PROTECTING the ILLUSTRATED LONDON NEWS during perusal. PORTFOLIOS to contain Six Months' Numbers, 4s. each. CASES for BINDING the Volumes, 3s. 6d. each. May be obtained at the Office, 198, Strand; and of all Booksellers.

STATIONERY—The CHEAPEST in ENGLAND. Copy the address ARTHUR GRANGER, 2, Holborn-bars, City; and 10, Fitzroy-terrace, New-road.

GRAMMAR SCHOOL, Conducted by a CLERGYMAN (Graduate of Cambridge), distant forty miles from London. Boarders limited to twelve, who receive the utmost care and domestic comfort. Terms, Forty Guineas per Annum (no extras). Highest References. Address, Rev. X., Foubby's Place Warehouse, Bishopsgate-street, London.

QUEENWOOD COLLEGE, near STOCKBRIDGE, HANTS.
Principal, GEORGE EDMONDSON
MATHEMATICS AND NATURAL PHILOSOPHY.—Dr. Thos. A. Hirst, of the University of Marburg and Berlin.
CHEMISTRY.—Dr. Hermann Debus, late Assistant in the Laboratory of Professor Bunsen, and Chemical Lecturer in the University of Marburg.
CLASSICS AND HISTORY.—Frederick Iliff M. A., late Scholar of Trinity College Cambridge.
MODERN LANGUAGES AND FOREIGN LITERATURE.—Mr. John Rass, from M. de Fellenberg's Institution, Hofwyl, Switzerland.
GEOMETRY.—Mr. Richard P. Wright.
PAINTING AND DRAWING.—Mr. R. F. Wright.
ENGLISH AND JUNIOR MATHEMATICS.—Mr Samuel Fothergill, Mr. Henry Pope, Mr. William Edgington.
MUSIC.—Mr. William Cornwall.
For further information, see prospectus, to be had of the Principal The Second Session of 1854 commences on the 25th of July.

A HOUSE, FURNISHED, is offered during the month of July, in the immediate vicinity of EATON-SQUARE, adjacent to the Parks, &c. The house is fitted up with all conveniences for lighting and heating, and is in thorough repair, &c. Moderate terms only required.—Address, post-paid, 33, care of Mr. EVERETT, 75, Old Broad-street.

EXMOUTH, DEVON.—Messrs. HERING and SON are instructed to LET a compact detached FAMILY RESIDENCE, most beautifully situate, with extensive seaview, large garden, &c. Rent, £80. The Residence contains nine large bed-rooms, three dressing-rooms, excellent drawing-room (41 feet by 16 feet), dining-room (27 by 19), breakfast-room, entrance-hall, and water-closets, and all usual domestic offices. Full particulars, on application to Messrs. Hering and Son, Auctioneers, 139, Fleet-street.

LONDON SUBURBAN COTTAGE and other RESIDENCES, for SALE, with Occupation, the purchase-money payable by Yearly Instalments, extending over a period of Ten Years. For descriptive particulars apply to Mr. DAVID HUGHES, Land Agent, Surveyor, and Auctioneer, Guildhall; and to view properties, apply to Mr. GREEN, Milford-road, Grove-road, Upper Holloway; and Mr. HARRIS, 4, Marlborough-terrace, opposite the Lee Arms, Brownlow-road, Dalston.

HERTFORDSHIRE.—Messrs. SNELL and CO. beg to announce that they have to LET, for a Term of Years, suitable to Family residences also, a Residence, MANSION, Furnished, seated upon an eminence, in a finely timbered Park of about 250 acres, in the most beautiful part of the country, about twenty miles from town, and fourteen from Watford, which is a principal railway station, with capital trout fishing, the river Chess passing through the lower gardens and meadows. The Mansion comprises on the ground-floor, entrance and inner halls, dining-room, two drawing rooms, library, billiard room, and other apartments; and, if good illnesses; on the first floor nine bed chambers, dressing-rooms, bath, &c.; servants' sleeping-rooms on floor above; all requisite attached and detached (offices; excellent stabling and coach-houses; good kitchen and flower-gardens; hot and pine-houses; melon ground, &c. The Mansion, Gardens, and Fishery, may be had without the Park. Hunday within easy distance. Lord Lonsdale's hounds meet occasionally in the immediate vicinity.—For particulars and cards to view, apply at Messrs Snell and Co., Upholders and Estate Agents, 37, Albemarle-street, Piccadilly

THE CONSERVATIVE LAND SOCIETY.
ALLOTMENT OF THE WEYBRIDGE ESTATE.
TRUSTEES
Lord Viscount Ranelagh. Col. Lowther, M.P.
Rt. Hon. R. A. Christopher, M.P. J. O. Cobbold, Esq., M.P.

Pure Roussillon (one of the finest red wines), 36s.; Dinner Sherry, Standard or Natural, 36s.; Fine old Ruby Sparkling Port, Moselle (Musical Sauce), 30s. 42s.; Red Hermitage, Julien Claret, 30s. 36s.; Milk Punch, 36s.—PORTER and SHERRY, 20s. per dozen. Terms, Cash. Carriage free to all rail stations in England. Wines shipped free of duty.

A NEW DISCOVERY in TEETH.—MR. HOWARD, Surgeon-Dentist, 52, Fleet-street, has introduced an entirely NEW DESCRIPTION of ARTIFICIAL TEETH, fixed without springs, wires, or ligatures. They so perfectly resemble the natural teeth as not to be distinguished from the originals by the closest observer; they will never change colour or decay; and will be found superior to any tooth ever before used. This method does not require the extraction of roots, or any painful operation, and will support and preserve teeth that are loose, and is guaranteed to restore articulation and mastication.—52, Fleet-street. At home from 10 till 5.

THE BLACK SEA FLEET OPERATIONS.

"THE AGAMEMNON" LAYING OUT A BAIT FOR THE RUSSIAN FLEET BEFORE SEBASTOPOL.—(SEE PAGE 576.)

(*Continued from page* 576.)

news of the victory, and that the place was in possession of the Turks. The boats, after landing the Turkish troops, pulled for the forts, and then into the river, hoping to cut the Russians off; but their flight was too rapid; and, on pulling up the river, it was afterwards ascertained that the Russian garrison had always the means of securing their retreat, by destroying the bridge of boats after crossing it, and that, during their retreat on this occasion, they had set fire to and completely destroyed the store houses and town, which had extended about a mile and a half up each side the river. The barracks and buildings inside the fort, and near the beach, within range of the guns, although evidently prepared for the torch of destruction, had escaped, the Russians not having time to fire them in their hasty retreat. The exact number of the garrison is not known; but information leads us to suppose, as well from the numbers seen from the mast-heads retreating, that they were

BURNING OF REDOUT KALEH.

2000 strong. The inland defences were found not to be strong, and no time was to be lost in securing the Turkish garrison against a surprise or an overwhelming force coming down on them; accordingly, men were landed, and in the course of two days such extensive intrenchments were thrown up as to ensure the Turks being able to hold out against any number of Russians likely to be brought against them. Sir E. Lyons, feeling satisfied with the strength of their position, departed for Sinope; leaving Captain Jones in the *Samson*, to inspire the new Turkish garrison of Redout Kaleh with confidence. We also find that the fortresses and towns of Agyeoo and Poti, dependencies of Redout Kaleh, were evacuated and burnt, on the intelligence of the fate of Redout Kaleh being received.

BOMBARDMENT AND CAPTURE OF REDOUT KALEH.

THE ASCOT CUP.—(SEE NEXT PAGE.)

HER MAJESTY'S VISIT TO THE MARQUIS AND MARCHIONESS OF BREADALBANE.

On Wednesday (last week) her Majesty and H R H Prince Albert, accompanied by their Royal visitors, the King of Portugal and the Duc d'Oporto, honoured the Marquis and Marchioness of Breadalbane with their presence at a grand ball given to nearly one thousand leading members of the aristocracy and the *élite* of society, at the noble Marquis's magnificent residence in Park-lane.

One of the earliest instances, after the Queen's marriage, in which her Majesty was pleased to accept the hospitalities of a private Peer was when, in 1842, she visited the Marquis of Breadalbane, at Taymouth Castle; and to that circumstance may, perhaps, in some measure, be traceable the partiality which the Queen has ever since manifested for an annual sojourn in the romantic scenery of the northern portion of her dominions. Her Majesty's visit of last week may be regarded as an indication of the continuance of the cordial feelings with which the members of the house of Breadalbane have ever been regarded by the Sovereign.

The saloon prepared for dancing, was built in the garden of Breadalbane House and the adjoining mansion. This magnificent apartment is analogous to the great hall at Taymouth Castle The decorations are in the mediæval taste. The roof is an open frame of timber, consisting of five bays, each bay divided into panels. The centre is occupied by a series of heraldic figures and emblems illustrating the authentic genealogy of this branch of the house of Campbell through twenty generations, extending back to an age prior to that of Robert Bruce. The side compartments are enriched with the insignia of the Order of the Thistle, of which the noble Marquis is a Knight Companion. The thistle and rue, with the motto "Nemo me impune lacessit," are here set forth in bold relief In the centre of the roof are dormer windows of stained glass inscribed with the family motto, "Follow Me." The walls of the saloon are decorated in imitation gold tapestry; and the apartment was illuminated by enamelled brass coronæ of five lights each, suspended by brackets terminating with the family crest—a boar's head. At the eastern end of the saloon were groups of ancient armour, and family and national banners, surmounted by a grandly-emblazoned monogram, "V. R.," underneath which appeared the Gaelic salutation of welcome, "Ceud mile failte."

THE QUEEN'S GOLD CUP.—(SEE NEXT PAGE.)

GRAND BALL TO HER MAJESTY, AT BREADALBANE HOUSE, PARK-LANE.

At the western extremity was a raised "recessed" orchestra, capable of containing twenty musicians. At the south end was the dais erected for her Majesty and the other Royal visitors; and over the throne waved the banners of the Queen, the King of Portugal, Prince Albert, and the Duchesses of Kent and Cambridge. The internal slopes of the roof are decorated with gold and crimson. On the panels, interspersed with the family arms and heraldic trophies, are some of the names most memorable in the annals of the Lords of Lorn. The floor is beautifully inlaid with oak and cherry-tree from the ancestral forests of Tayamouth.

This magnificent ball-room was the chief scene of the entertainment; but other rooms in the mansion were also devoted to the accommodation of the guests. In the principal banqueting-room, as well as in some of the other apartments, was a costly display of gold and silver plate. Throughout the mansion was a profusion of flowers. In artificial positions were placed pictures, sculpture, and other works of art, imparting to the whole interior an air of richness and poetic beauty.

The exterior of the mansion, both in the Park-lane and Grosvenor-street frontages, was brilliantly illuminated.

Her Majesty and Prince Albert, accompanied by the King of Portugal and the Duc d'Oporto, and attended by the Lords and Ladies of the Household, arrived, in six of the Royal carriages, at ten o'clock.

The Marquis and Marchioness of Breadalbane received her Majesty at the entrance of the mansion, and conducted her to the Royal boudoir adjoining the *salle de reception*, into which the illustrious guests immediately passed. The Queen having taken her seat on the dais, the company defiled before her Majesty, and re-assembled in the principal ball-room.

At half-past ten o'clock the Queen entered the ball-room, resting on the arm of the Marquis of Breadalbane. The King of Portugal followed, leading the Marchioness of Breadalbane. The Duchess of Cambridge (who had previously arrived) was led by Prince Albert, and the Princess Mary followed with the Duc d'Oporto. As the Queen entered, the orchestra, led by M. Laurent, played the National Anthem.

The illustrious party having for a few moments admired the imposing scene presented to them, the Marquis of Breadalbane received her Majesty's command to form a quadrille, in which he was honoured with the hand of the Sovereign. His Royal Highness Prince Albert danced in the same set with the Countess Walewska.

A waltz followed this quadrille, after which a second set was formed, in which her Majesty honoured the Ambassador of France with her hand, the Prince Consort dancing with the Princess Mary.

After a short interval, during which other dances ensued, her Majesty was pleased to join in a quadrille with the Duke of Hamilton; the French Ambassador being honoured with the hand of the Duchess of Hamilton (née Princess Mary of Baden).

The festivities were kept up with unflagging spirit until some time after midnight, when the Queen was conducted by the Marquis of Breadalbane to the supper-room, where a sumptuous banquet was served.

Her Majesty subsequently returned to the ball-room, and after participating for some time longer in the hospitalities of the noble Marquis, retired.

Among the company present were Prince Ghodam Mahomed, Prince Feroze Shah, the French Ambassador and Countess Walewska, and the members of the *corps diplomatique*.

The King of Portugal and his brother took great interest in the scene, but they did not take an active part in the entertainments. At half-past twelve o'clock the Royal carriages were in attendance, and her Majesty, Prince Albert, and their illustrious visitors were conducted to their carriages by the Marquis and Marchioness of Breadalbane, the principal Foreign Ministers, and officers of her Majesty's household.

Her Royal Highness the Duchess of Kent was prevented from being present by indisposition.

From the striking and effective character of this festivity much credit is due to the skill and taste of Mr. Crace, to whom the construction and ornamentation of the new ball-room had been entrusted by Lord Breadalbane. The admirable mode of lighting adopted by Mr. Faraday displayed the stained-glass windows to great advantage.

THE ASCOT PRIZE PLATE.

The three "Cups" contested for at Ascot in the past week are tasteful specimens of design and metal work, and will maintain the high reputation which English artists have achieved of late years.

The principal "Cup"—called this year "the Ascot Cup," and not the "Emperor's Vase"—has been manufactured by Messrs. Garrard, goldsmiths to the Crown, Haymarket. It is a statuette group of men and horses, in bright and frosted silver, from a design and model by Mr. Cotterill. The novelty lies in the treatment of the subject, which is perfectly original. Three equestrian figures represent the onslaught made by Charles of Luxembourg, the aged and blind King of Bohemia, attended by two Knights, on the English Man-at-Arms, at the Battle of Cressy. The Monarch stands nearly erect in his stirrups, and wields over his head, in act to cut, the formidable two-handed sword of the fourteenth century. His banner is held by one of his attendant Knights; whilst the other, with lance in rest, rushes into the conflict. The composition of this group, seen from any point of view, is perfect. The character of the horses and their riders is ably diversified. The energy and determination of the group are surprising. The armour is an elaborate specimen of silver work. All the minor parts have been carefully attended to, and the finish of every part is exquisite.

The "Queen's Gold Cup" has been modelled by the same artist and manufactured at the same establishment as the above. It consists of a tankard of large size. The sides are arabesqued, something in the Oriental style, and on the lid are figures representing a startled horse, an Arab, and an Egyptian snake-charmer. The horse rears, the Arab holds him fast by the bridle, the snake hisses and threatens, whilst the "charmer" plays his pipe and reduces him by degrees to subjection. The whole is very delicately finished.

The third prize, the "Royal Hunt Cup," is after a design, a model by Mr. Alfred Brown, and has been manufactured in silver at the establishment of Messrs. Hunt and Roskell, goldsmiths to her Majesty. The

THE ROYAL HUNT CUP

group is entitled "The Rivals," and consists of two stags combating with Sneyders-like fierceness:—

> Mighty heroes of the mountain side,
> Contending champions for the kingly sway

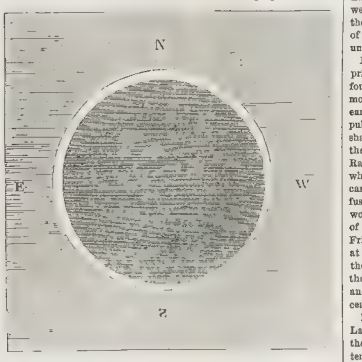
The composition is very life-like and characteristic, depicting a scene thus vividly described:—

> So when two vig'rous stags, each of his herd
> The haughty lord, through all the forest fear'd,
> Resolve to try which must in combat yield,
> In all their might advance across a field;
> They nod their lofty heads, and from afar
> Flourish their horns, preluding to the war.
> The combatants their threat'ning heads incline,
> And with their clashing horns in battle join.
> They rush to combat with amazing strokes,
> And their high antlers meet with fearful shocks;
> The mighty sound runs rattling through the hills,
> And echo with the fight the valley fills.
> Retiring off, the warriors cease to push,
> But then with fiercer rage to battle rush.
> The trembling herds at distance stand, and stay
> To know the conqueror, whom they must obey.

ON THE ANNULAR ECLIPSE OF MAY 26, AS OBSERVED IN CANADA.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

WE forward the following observations made by us yesterday, the 26th instant, on the Solar Eclipse. The mean time was obtained from several double altitudes of the Sun taken on the days preceding the



ANNULAR ECLIPSE OF THE SUN.

Eclipse, and continued up to the day itself by Mr. Rowan. The watches used were of a description to be depended upon, with a probable error of three or four seconds only. The register of the thermometers was carefully attended to by the Messrs. Williams, of Kingston; one thermometer was placed in sunshine, the other kept in the shade; the one placed in sunshine had the bulb blackened. Mr. Rowan used a small telescope by Troughton and Simms, attached to a transit theodolite; Baron de Rottenburg, a telescope by Dollond, three-and-a-quarter feet focal length, with an object-glass two-and-a-quarter inches. The place of observation was contiguous to Murney's Tower. The Eclipse was annular here, although not central, the Annulus being greater on the Eastern Limb than on the Western. Neither Mr. Rowan nor Baron de Rottenburg remarked any blunted appearance of the Sun's cusps, nor did they see any portion of the Moon's body throughout the Eclipse, with the exception that at 4 hours 49 minutes 15 seconds, a minute point of light, separated from the extremity of the Eastern cusp of the Sun by a very small distance, was first perceived on the dark body of the Moon. Possibly owing to the insufficiency of the optical aid employed, we did not perceive Baily's Beads with any degree of certainty. On the first contact of the Western Limbs of the Sun and Moon, Rowan observed a slight appearance of the light as it were running along the line of contact, but not with that degree of brilliancy or certainty which has been recorded on similar occasions. The first contact occurred at 3 hours 57 minutes 18 seconds, mean time; the junction of the Western Limbs of Moon and Sun at 5 hours 12 minutes 38 seconds; the junction of the Eastern Limbs of the Sun and Moon at 6 hours 42 minutes 42 seconds: the Annulus thus lasting 3 minutes and 4 seconds, and the Eclipse terminating at 6 hrs. 22 min. 28 sec. The Moon's Limb was remarked as slightly serrated in moving over the disc of the Sun, the utmost extent of unequality being towards the extremity of the Eastern Limb. At the period of greatest obscuration the appearance of the landscape immediately under the Sun was dark, and assumed a dull leaden hue, inclining to a neutral tint. The obscuration was very palpable and quite different from the ordinary shades of evening. Nothing remarkable was observed in the portion of the heavens opposite the Sun in the eastern horizon. Neither Mars nor any star of the first magnitude was visible. When the Annulus was formed, the double shadows cast by the Sun were very perceptible. The day throughout was most serene and cloudless, and highly favourable in all respects. No spots were observed on the disc of the Sun.

The following is the result of the observations made with the thermometers:—

We remain, Sir, your obedient servants,

DE ROTTENBURG, Lt.-Col.
FREDK. J. ROWAN.

Kingston, Canada West, 27th May, 1854.

THE WEATHER.—In Mr. Bushell's *Weather Almanac, with Calculations on the Wind*, for the present year, we find the following predictions (for the present month):—"*Weather*: Rain (without much) twenty-four hours) on the 3rd, 7th, 8th, 11th, 13th, 17th, 18th, 19th, 20th, 21st, 22nd, 25th (at one in the day), 26th, 29th, and 30th. Little summer weather: the latter part will be from the 3rd to the 11th; the remaining portion bearing little similitude, if any, to a 'glorious' June. Electricity but little. *Wind*: Gusty and very rough for the season; in particular at the end of the month. On the 4th, nearly north, or north by west, without much change to the 16th. Afterwards, a succession of fresh breezes from the west."

EXTENSION OF THE ELECTRIC TELEGRAPH TO SOMERSET HOUSE.—On Wednesday morning workmen were engaged in laying down a line of wires from the Strand to the Victualling Department of the Admiralty, Somerset House. By this arrangement the office will be placed in direct communication with the great naval arsenals at Pembroke, Plymouth, Portsmouth, Deal, Chatham, and from the last-mentioned yard with Sheerness, by means of numeral flags. Such a system is particularly required at the present time, as considerable delay will be avoided in sending orders for supplies of provisions and medical and surgical stores to ships fitting out, and for conveyance to those vessels forming the Baltic, North Sea, and Black Sea fleets, besides reducing the labour of the messengers.

WILSON'S HAMPSTEAD ESTATE BILL.—The Judges' report on this bill is most decidedly adverse. They say:—"We feel great difficulty in certifying our opinion that it is reasonable that the bill hereunto annexed (which we have perused without requiring any proof of its allegation) should pass into a law. It may well be that the testator abstained from extending the leasing power to the lands in question, for reasons which would have operated in his mind with equal force even if the lands had been as valuable for building purposes at the date of his will and codicils as they are now. Therefore, presuming the allegations contained in the preamble of the bill to be proved to the satisfaction of your Lordships, they do not, we think, afford any reasonable ground for applying to the Legislature for the powers which are sought."

OPENING OF THE CRYSTAL PALACE.

THE Crystal Palace doors are open, and doubts and fears and dolorous prognostications are at an end. Already, with but few dissenting voices, the verdict has been pronounced—"Paxton's second Palace is a greater success than his first." Such was the meaning of the applauding murmure of the tens of thousands who on Saturday last crowded the avenues and galleries, thronged the terraces, and wandered over the blooming gardens, and harmoniously shaven undulating lawns, adorned with statues and vases of marble, where less than two years ago were holly plantations and rudely-sloping fields. The work is not complete the fountains have yet to gush and the cascades to flow. The mason and the decorator, the sculptor and the painter, have still before them work of importance. The gardener has not ended his task; and another spring at least must pass over before the full idea of the author of the pleasure-grounds and park can be complete; but enough, and more than enough, has been displayed to extort even from the unwilling an acknowledgment that the second triumph is greater than the first. "Yes," ejaculated one of the most active organisers of the truly "Great" Exhibition of 1851—one who has hitherto studiously avoided countenancing the Sydenham Palace by word or deed—"this is a great success!" It was not extraordinary that the cautious world should doubt and fear the results of a second edition of the Crystal Palace of Hyde-park. Continuations are proverbially unsuccessful.

In this instance the public had been satiated with books, pictures, prints, speeches, and poems, in every shape, form, and substance, founded on the Hyde-park Exhibition. The prestige of a national—a more than national—a "World's Fair," was wanting, and had to be earned. The elements combined with the indifference of the general public, and the over-sanguine calculations of the promoters, to "lengthen shadows of despondency," as the Persians say. The opening adjourned, the capital doubled, the winter's rains, the miry roads, the West end Railway unfinished—these were stubborn arguments on the side of those who cried from day to day, with disagreeable pertinacity, "Oh! it never can be ready this year or even next: it is impossible to bring this confused mass of carpentering, gardening, statues, masonry, painting, iron work, and earth work, into an harmonious whole fit for the reception of a public rendered critical by the great work done in 1851." Even on Friday evening—when the carpenters were hammering away on all sides at seats and steps, needlewomen stitching at the crimson draperies of the Queen's Dais, and excited exhibitors were distractedly arranging their stalls by borrowed light:—it seemed impossible that the mere dust and rubbish could be cleared away, or the confused noise of preparation cease, for many days.

But in the night time some good fairies, or powerful genii of the Lamps of the modern Aladdins, must have been at work; for when the privileged, admitted by the "Open, Sesame!" of the "Press," entered the Great Transept an hour before the ordinary visitors, they found the galleries and avenues they had left deformed by rough deal, noisy and busy, silent and spotless, all around glowing in crimson cloth. Even the chaos of the exhibitors' department had been reduced to order again.

Never was an inaugurating ceremony ushered in by a more favourable day—a bright sun and refreshing breeze gave clear light and shade to the well-wooded panorama which rolled from both sides of what will soon be known as the Crystal Palace Hill.

An hour before the time fixed for opening the doors, long lines of carriages were to be seen slowly toiling up the series of acclivities by which the Palace is approached from the Dulwich and Norwood side of the country, while the special railway trains deposited an army of impatient visitors at the foot of the unfinished railroad avenue which leads to the South Wing.

The police had scarcely taken up their positions when impatient knockings warned the guardians of the interior that a "crush" was gathering outside. No sooner was the word given to unbolt, than in flowed a gaily-dressed crowd, armed with cards of all the colours of the rainbow; and here it was that the first and only misadventure occurred—which, however, thanks to the tact and good temper of the police, the forbearance of the patient public, aided by the zealous exertions of the officials of the Company, ended in a manner satisfactory to all parties. By the miscarriage of a bundle of printed instructions, the police were for the most part ignorant of the hidden meaning of the various colours, and so it came to pass that some shy and unfortunate persons provided with most powerful coloured talismans, were detained in odd corners and out-of-the-way avenues, until relieved by the friendly intervention of some who held the interpreting key as well as the necessary authority. Hence arose divers comic scenes. As for instance, when a large party who had unlawfully possessed themselves of a row of chairs in the Main Avenue, near the Transept, which had been reserved for special guests, were diverted from the chorus of rebellion which met the attempt of the police to dispossess them, by a hint from the Director in-Chief that an opposite cloth-covered amphitheatre was at their service—the scramble that followed—the agility displayed by languid forms in flounces, feathers, and lace—the rush to the poll, in which "tall intended" whipped up his little beloved in his arms, like a baby, and carried her across the Nave to the top row of the new seats—might, we trust will, form a subject in Doyle's next series of the "Manners and Customs of ye Englyshe."

By degrees, order was restored. The police learned the comparative value of colour. Sir Joseph, as Commander-in-Chief, rapidly decided on the new arrangements rendered necessary by the exigencies of the moment, despatched his aide-de-camp with his orders, and himself assisted in placing guests, distinguished as foreign visitors or otherwise, in appropriate situations.

By one o'clock, almost every available part of the Nave and First Gallery was full, and the whole length of the Nave lined with fair faces and pretty bonnets—except the Dais, where the Chair of State, under a canopy suspended from the roof of the Central Transept, gorgeously emblazoned with heraldic symbols, awaited the arrival of the Queen, the Prince, and her illustrious family and Royal guests.

On the west side of the Central Transept, behind the Dais, rose up an amphitheatre covered with crimson cloth, on which were seated three bands, and a volunteer chorus of 1800 singers, including some eminent vocalists, each holding in his or her hand a sheet of music. On one of the lower benches the fine white head of Lablache was to be seen, amid other celebrities of Italian and German song; lower still, the solo singer of the day, Clara Novello; while, from a purple velvet chair, Costa took the command. Around the two other sides of the Dais the *corps diplomatique* had their seats—homely, rush-bottomed chairs; and behind these gentlemen, in their glittering uniforms, the Directors and Officers of the Company were gathered, in their Court costume. In front, towards the Garden side, were the visitors provided with reserved seats—the Lords and Commons occupying amphitheatres in the galleries. Underneath, on benches raised up to the height of the pedestals of the colossal statues of Rubens and Admiral Duguesne, were other specially invited guests—among whom several Indian Princes, in cloth of gold and turbans with egrets' feathers, tipped with monstrous jewels, glittered like heroes of the Arabian Nights.

In front, on the floor of the Transept, in all the dignity of flowing robes and fur, was a compact army of Mayors and Aldermen, headed by the Lord Mayors of London, Dublin, and York, with here and there a London citizen, who, for that day, preferred the light uniform of the

City Lieutenancy or Artillery Company, to the civic gown or the court suit.

As the great clock struck three, a cheer resounding from the outside, and then a murmured whisper rolling from the great central door to the furthest extremity of the Building, announced that the Queen had arrived. Soon, through a broad avenue (cleared in silence by the police), her Majesty appeared in the Grand Transept, preceded by Mr. Laing and Sir Joseph Paxton. Then the multitude, rising, cheered, until the crystal arches rang again and again, while the mighty living amphitheatre of singers, shouting in time, and waving the white sheets of music, produced a novel and striking effect.

Her Majesty ascended the raised Daïs, took her seat with the King of Portugal (who seemed rather startled by the cheers), the Duchess of Kent, the Duke of Oporto, and the Princess Royal and the Princess Alice on her right hand, and with his Royal Highness Prince Albert, the Prince of Wales, Prince Alfred, the Duchess of Cambridge, and Mary of Cambridge on her left. Behind stood the Duchess of Sutherland, the Duke of Wellington, the Earl of Breadalbane, the Marquis of Ailsbury, the Ladies in Waiting, Equerries, and other official personages. All were in full dress except her Majesty, who wore a blue glacé silk dress and a white lace bonnet trimmed with roses. Prince Albert wore a Field-Marshal's uniform.

So soon as the illustrious party had taken their places, and the cheers which greeted the Queen had died away, the great army of singers, accompanied by the three bands, rolled forth "God Save the Queen." Every heart thrilled, and tears rose unbidden into the eyes of many little accustomed to the luxury of tears.

The improved construction of the Building, for musical purposes, was made evident during this performance; for, as Clara Novello, with lark-like clearness, sang the solo parts, the sweet solemn strains travelled to the most distant parts of the Crystal Palace, and were heard with as much distinctness in the recesses of the Northern, as in the Central Transept.

When the music ceased, Mr. Laing, attired in the uniform of a Deputy-Lieutenant for his native county, came forward, ascended the Daïs, and read from a parchment roll the following address:—

May it please your Majesty graciously to accept the assurance of our devoted loyalty and attachment to your throne and person, and of our gratitude for the kind condescension with which your Majesty has consented to honour with your presence the ceremony of this day.

Among the many memorable events of your Majesty's happy reign, the Great Exhibition of 1851 occupied a prominent place. The idea, for which the nineteenth century was indebted to your illustrious Consort, Prince Albert, of an Exhibition open to the products of all industries and of all nations, marked of itself an era in the annals of civilisation. It marked the disappearance of old commercial jealousies and international prejudices before the combining influences of modern science and the liberal spirit of modern legislation.

The realisation of this idea was worthy of its conception. An entirely novel order of architecture, producing, by means of unrivalled mechanical ingenuity, the most marvellous and beautiful effects, sprang into existence to provide a Building. In this Building a collection of the choicest products of all that the human intellect conceives, and the human hand executes, was exhibited during a period of six months, for the instruction and delight of assembled millions.

The conduct of these millions was, of itself, one of the most remarkable features of this great event. The perfect order and decorum which prevailed, the enlightened interest and ready appreciation which were displayed, afforded the most conclusive refutation of the prejudice which regarded the industrious masses of our English nation with mistrust, and represented them as rude, destitute of refinement, insensible to the humanising influences of art, and incapable of rational and enlightened enjoyment.

The Great Exhibition of 1851 afforded a conclusive proof, by the enlightened interest and ready appreciation which were displayed, that the people of England were prepared to receive instruction when it was afforded to them, and to embrace whatever opportunities were given for the cultivation of taste and for the development of the instinctive love of the beautiful.

The establishment of this fact, and the recognition of the civilising influences so widely exerted by the Great Exhibition, led to a general feeling, when its removal from Hyde park became necessary, that some attempt should be made to perpetuate those influences in a more permanent form in another locality.

This undertaking, the inauguration of which your Majesty this day honours with your presence, originated in this feeling. Private enterprise—appealed to in the interests of civilisation—supplied the funds. The men whose names had acquired European ability in connection with the Crystal Palace of 1851, placed their services at the disposal of the Directors in their respective departments. The enlightened patronage of Royalty, the sympathy and support of public opinion, the generous co-operation of distinguished men in science and art, urged on the undertaking, and impressed it with a national character. The liberality of foreign Governments threw open every museum, and afforded facilities never before known for acquiring a complete series of the finest works of ancient and modern art.

Thus aided and encouraged, the original idea expanded into wider dimensions. It was resolved to attempt the creation of a Palace and Park which should be at once a fitting ornament of the greatest metropolis of the civilised world, an unrivalled school of art and instrument of education, and a monument worthy the age and of the British empire.

It was hoped to prove that the spirit of a free people cannot only create wealth, extend commerce and colonies, and take the lead in every department of moral and material progress, but can at the same time rival the proudest works of absolute monarchs, lavishing the resources of nations in the decoration of a favourite residence or the embellishment of a chosen capital.

With these views the Directors embraced three leading objects in their undertaking—amusement and recreation, instruction, and commercial utility.

The first object was sought to be attained by the creation of a new Crystal Palace, far exceeding the original structure of 1851 in dimensions and in architectural effect—of a terraced garden and park on a scale of magnificence worthy of the palace, and of a system of fountains and waterworks surpassing anything which the world has yet witnessed.

The educational object embraces a complete illustration of the arts of sculpture and architecture from the earliest works of Egypt and Assyria down to modern times, comprising casts of every celebrated statue in the world, and restorations of some of its most remarkable monuments.

In science, geology, ethnology, zoology, and botany receive appropriate illustrations—the principle of which had been to combine scientific accuracy with popular effect; and in its ultimate development the Directors are bold enough to look forward to the Crystal Palace of 1854 becoming an illustrated encyclopædia of this great and varied universe, where every art and every science may find a place, and where every visitor may find something to interest, and be taught through the medium of the eye to receive impressions, kindling a desire for knowledge, and awakening instincts of the beautiful.

Combined with art and science, industry receives its due representation. The Industrial Exhibition is based on principles of commercial utility, taught by the experience of the Great Exhibition of 1851. The advantage to national interests of a place where the best products of different industries and localities could be seen and appreciated was no less manifest than the importance to individual producers of such an unrivalled means of publicity, and the conveniences to buyers and sellers of such a world's fair for the exhibition and inspection of goods, and the transaction of mutual business.

The Crystal Palace of 1854 will perpetuate those advantages under regulations suited to the permanent character of the Industrial Exhibition. As in 1851, the doors will be thrown open freely for the products of all nations; and the presence of so many distinguished representatives of foreign Governments, on this occasion, affords a gratifying proof that enlightened men throughout the world are alive to the advantages of such common centres of friendly union, both to the arts of industry and to the highest interests of peace and civilisation.

Such, sir, is please your Majesty, is a brief outline of the objects which the promoters of this undertaking have proposed to realise. It will be apparent that the comprehensiveness of the plan precludes the idea of absolute completeness. The colossal scale of the proposed system of waterworks makes another year requisite to ensure their proper display. The industrial department being of a permanent character, cannot, as in the case of a temporary exhibition, be finished by a given day. The plants and flowers, which will form such a main feature of attraction, require time for their growth. The educational scheme is purposely traced so as to leave room for future development.

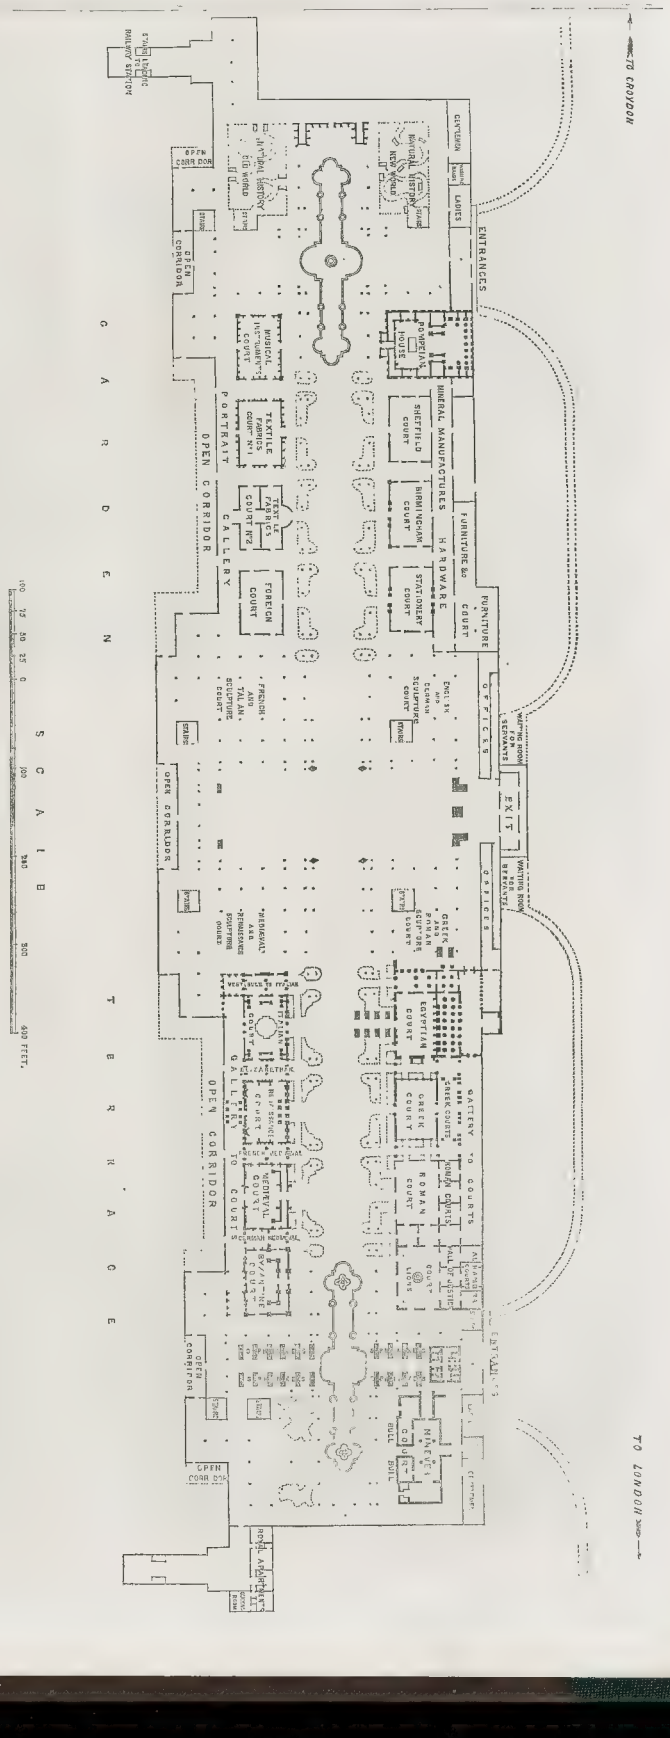
Under these circumstances, the Directors have considered it their duty to throw the Palace and Park open to the public as soon as they are sufficiently completed to enable a fair judgment to be formed how far the undertaking deserves success, and how far it has achieved it.

Your Majesty has heard the statement of the motives in which this enterprise originated, and of the principles on which it has been conducted; it rests with your Majesty now to judge whether the performance equals the promise, and whether the Palace and Park, with their varied contents which surround us, are worthy to be considered—what the Directors, whose organ I am, would think their highest praise—a legitimate offspring of the Great Exhibition of 1851, and an appropriate development of one of the noblest ideas of modern civilisation.

To this address the Queen made the following gracious reply:—

I receive with much pleasure the loyal and dutiful address which you have presented to me upon the present occasion.

It is a source of the highest gratification to myself and to the Prince



GROUND-PLAN OF THE CRYSTAL PALACE AND GARDENS, AT SYDENHAM

OPENING OF THE CRYSTAL PALACE.—ARRIVAL OF HER MAJESTY.

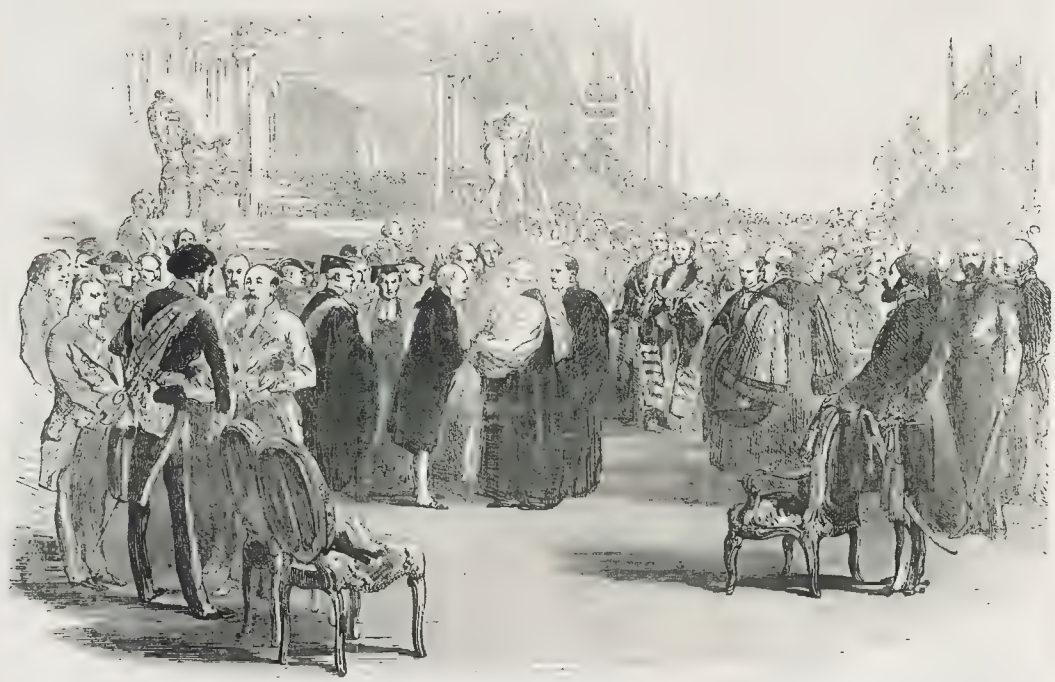
my Consort, to find that the Great Exhibition of 1851, which was so happily inaugurated under our auspices, suggested the idea of this magnificent undertaking, which has produced so noble a monument of the genius, science, and enterprise of my subjects.

It is my earnest wish and hope that the bright anticipations which have been formed as to its future destiny may, under the blessing of Divine Providence, be completely realised; and that this wonderful structure, and the treasures of art and knowledge which it contains, may long continue to elevate and instruct, as well as to delight and amuse, the minds of all classes of my people.

Mr. Fuller then, as Managing Director, presented her Majesty with a series of gold medals, struck by Messrs. J. R. Punches and Co., to commemorate the opening. Mr. Laing then successively introduced Sir Joseph Paxton, Messrs. Owen Jones, Digby Wyatt, S. Phillips, Fergusson, Professor Owen, and Mr. Waterhouse Hawkins, Dr. Latham, Professor Forbes, supported by Mr. Waterhouse, Mr. Gould, and Mr. Tomkins, who had the honour of presenting Handbooks of their respective departments to her Majesty.

A spontaneous burst of cheering was elicited by the marked graciousness with which the Queen received Sir Joseph Paxton. Mr Digby Wyatt, too, achieved a decided success by the graceful manner in which he ascended the Dais, presented his Handbook, and descended the short but difficult steep of the temporary throne. It was his second triumph that day, when, for the first time, his beautiful series of Courts were clearly seen. But some others, who had had less practice, or possessed less presence of mind, advanced with considerable timidity, retreated in great trepidation, and, more by good fortune than by skill, reached the floor on their legs, without pity from the spectators, who seemed to enjoy the interlude of awkwardness as a relief from the monotony of *seeing* a number of speeches delivered; hear one word they could not!

When the last book had been delivered, the procession of Directors, contractors, and officers, was formed and set out: the Queen and Prince, immediately preceded by Mr. Fuller, the Managing Director, attended by Sir Joseph Paxton and Mr Laing, and followed by the King of Portugal, the Royal Family, the Duke of Oporto, and their respective suites; the Archbishop of Canterbury, the Cabinet Ministers, the Foreign Ambassadors and the Foreign Ministers, proceeded down the south arm of the Nave, between a living hedge of fair faces, crowned with bonnets which were perfect gardens of flowers. Amid a rising surge of cheers, the Queen proceeded round the marble basin, still dry, adorned by Osler's Crystal Fountain, and pass the screen, where a statue of Victoria forms the central figure



OPENING OF THE CRYSTAL PALACE.—WAITING FOR THE QUEEN.

OPENING OF THE CRYSTAL PALACE.—THE ARCHBISHOP'S PRAYER.

of the complete line of the Sovereigns of England; and then along the east front, back to the Central Transept, where, diverging into the open corridor, there her Majesty paused to admire the terraces, gardens, and landscape which were, on that bright, clear day, to be seen in full perfection; and then on, across the avenue of sphinxes and date-palms which lead to the huge Egyptian gods, up to the Northern Fountain, where bronze groups, by Monti, uncovered for the first time that day, elicited a spontaneous murmur of admiration as they came upon the view of the non-official personages of the procession; and so, past the indescribably magnificent Alhambra Court, and the severer beauties of Greek and Norman art enshrined in the richest flowering shrubs, the Queen resumed her place upon the Dais, and the procession again clustered round the temporary throne, while the multitude crowding the surrounding seats cheered long and loud. Then followed the simple grand music of the Hundredth Psalm, all standing uncovered—seldom can it have been performed with more solemn, intense effect. Then his Grace the Archbishop of Canterbury, standing forward on the left of the Throne, offered up the following prayer:—

Almighty and everlasting God! who dost govern all things both in heaven and earth, incline Thine ear, we entreat Thee, to Thy people, which call upon Thee, and graciously receive our prayers. Without Thee nothing is strong, nothing is holy. "Except the Lord build the house, their labour is but lost who build it." And now we entreat Thee to bless the work which we have accomplished in this place, and to render it the means of promoting Thy glory. May those who admire the wonders of nature which are here displayed be taught to perceive in those the vigour of that creative wisdom by which all things fulfil the purposes which they are designed to serve; enable those who survey the wonders of art and industry which surround them, to remember that it is by Thee that knowledge is increased, and science made to minister to the benefit and comfort of mankind; for the spirit of man is from Thee, and the inspiration of the Almighty giveth him understanding; therefore, "Not unto us, O Lord, not unto us, but unto Thy name be all the praise." While we contemplate the remains of former ages and the monuments of ancient greatness, enable us to profit by the examples they afford of the instability of earthly things, and ever to bear in mind that according to Thy providence nations flourish or decay; that Thou hast but to give the word, and the richest may become poor, and the proudest be levelled into dust. Therefore, O Lord, we entreat Thee so to regulate the thoughts of our hearts, that they may not be lifted up, that we forget the Lord our God, as if our power or the might of our hands had gotten us this wealth. It cometh of Thine hand, and is all Thine own; both riches and honour come of Thee; and Thou reignest over all, and in Thy hand it is to make great and to give strength unto all. Now, therefore, O Lord, we thank Thee, and praise Thy glorious name, and beseech Thee to grant that the many blessings vouchsafed to our nation may dispose our hearts to serve Thee more faithfully, and in all that we undertake to seek Thy honour and glory. Above all, teach us to use the earthly blessings Thou givest us richly to enjoy, that they may not withdraw our affections from those heavenly things that Thou hast prepared for those that love and serve Thee through the merits and mediation of Thy Son, Jesus Christ our Lord, in whose prevailing name and words we further call on Thee.

The Archbishop concluded with the Lord's Prayer.

Then the orchestra performed the "Hallelujah" chorus. We dare not attempt to describe the effect of that overpowering, simple, solemn strain, performed in such a place, after such a scene.

The Lord Chamberlain, the Marquis of Breadalbane, by her Majesty's command, then declared the Palace open.

The National Anthem again resounded from the 1500 musicians

LAUNCH OF "THE ERE," AT MILLWALL.—(SEE NEXT PAGE.)

Her Majesty retired, and in a few minutes appeared in the Corridor, east of the Central Transept. There, in front, a line was formed by the Coldstream Guards and the Hon. Artillery Company; behind, tens of thousands of anxious loyal subjects of all degrees. Again loud shouts resounded; the carriages dashed up, the scarlet-coated outriders, pranced in front. The standard bearer saluted, the soldiers presented arms, the carriages dashed away, and the ceremony of the day was ended! Meanwhile the multitude within dispersed to begin the day's first examination of the Crystal Palace.

And so, without one accident, ended the day which launched and entrusted to public support an undertaking of a most remarkable and unprecedented nature, whether regarded in an artistic, an educational, or a commercial point of view: not perfect by any means—open, doubtless, to much criticism in matters of detail—but a wonderful advance upon any previous attempt to amuse and educate the people.

GUIDES TO THE CRYSTAL PALACE.—Under the title of Crystal Palace Library, a series of small volumes, varying in price from three-pence to eighteenpence, has been prepared and issued under the sanction of the Directors, by individuals connected with the undertaking, or gentlemen engaged to illustrate particular branches, of which their previous pursuits had rendered them competent to treat. We are obliged to defer any critical notice of them till our next.

LAUNCH OF HER MAJESTY'S SCREW STEAM-SHIP, "ESK."

THE launch of her Majesty's screw steam-ship the *Esk*, corvette, of 21 guns, designed in the office of the Surveyor of the Navy, and built by Messrs John Scott Russell and Co., took place at Millwall, on Monday last. Great crowds were collected on both sides of the river to witness the ceremony, which excited unusual interest, from the fact of the *Esk* being the first war steamer ever launched with all her machinery on board. Among the spectators were the Queen's Advocate and Lady Harding, Sir Robert Price, Bart., M.P.; Sir David Brewster, Professor Willis, Captain Washington, R.N.; Mr. Chatfield, Master Shipwright; Mr. Monshett, Store Receiver; Mr. Pearse, Master Attendant of Deptford Dockyard; Mr. Rice, Master Shipwright; Mr. Gottlieb, Store Receiver; Mr. Atherton, Civil Engineer of Woolwich Dockyard; and Mr. Baker, Mr. Campbell, Mr. Stroud, and Mr. Robinson, Directors of the Eastern Steam Navigation Company, and the Secretary of the Company, together with a number of scientific men.

The ceremony of naming was performed by Miss Martin, daughter of Captain Martin, C.B., Superintendent of Deptford Dockyard, who some time ago christened the *Hannibal*, 91 screw steam-ship, at Deptford. At half-past two she was conducted by Mr John Scott Russell to the bow of the ship, where a bottle of champagne was suspended, ornamented with wreaths of roses, pelargoniums, and calceolarias. At the appointed signal, the bottle was let fall and broke instantly, and the fine vessel glided down triumphantly into the water, amidst the cheers of the spectators on the shore and the workmen on board, which were re-echoed lustily by the passengers of an emigrant ship which happened to be passing at the time.

The *Esk* is intended to join the Baltic fleet as soon as she can be got ready for service. She is built of wood, after the model of the *Highflyer*, and has only been on the stocks ten months. Her dimensions are:—Length between the perpendiculars, 192 feet; length of the keel for tonnage, 167 feet 8 inches; breadth, extreme to outside walls, 36 feet 6 inches; breadth for tonnage, 36 feet; breadth, moulded, 35 feet 4 inches; depth in hold, 23 feet 8 inches. Her tonnage is 1153 39-94, and her horse power 250.

After the ceremony a splendid collation was given to upwards of four hundred persons, specially invited by Messrs. Scott Russell and Co. A large room in the work-yard was fitted up for the occasion. The band of the Artillery Company, which played during the earlier part of the day's entertainment, was in attendance throughout, and the proceedings terminated with several speeches and toasts. The healths of the Queen, of Prince Albert, and the Royal Family, and of the Lords Commissioners of the Admiralty, were proposed by Mr. John Scott Russell, and received with demonstrations; and the health of the hospitable entertainer himself was boisterously responded to on all sides.

GREAT IMPROVEMENT IN THE EASTERN COMMISSARIAT.

Letters from Constantinople announce that the porter and other "good things" so long promised and sodong withheld were about to make their appearance, to the great delight of our countrymen. Previous to the departure of the troops from Soutari, a general order, part of which consists of an extract from a Treasury minute, was issued amid great cheers. It is to the following effect:—"The Lords Commissioners of the Treasuring that the efficiency of the troops proceeding on special service to Turkey would be promoted by offering them the means of purchasing the articles of diet to which they have been accustomed in England, in addition to their ordinary rations of bread and meat, have given directions that supplies (the quantities and prices are specified in a tabular statement accompanying the document) should be purchased and consigned to Commissary General Filder, in consideration of the nature of the service in which the troops under Lord Raglan's command are likely to be employed. The articles are to be supplied at their nearest whole sale cost and free of duty, the public bearing the expense incurred for freight, packages, &c.;" and a suggestion is made to Lord Raglan that, in order that the privilege of purchasing these articles at a reduced price may not be converted to any other purpose than the soldier's benefit, his Lordship should fix (more especially with respect to the beer) a limit to the quantity to be allowed to both officers and men, and devise means for ensuring, as far as possible, that the allowance is *bonâ fide* for the use of each individual for whom it is drawn.

In accordance with the above objects, Lord Raglan has issued a set of regulations to the purport subjoined:—

1. The each regiment be provided with a convenient tent, in which to deposit the stores in charge. 2. That a set of weights and measures be prov ded for each of the camp stores by the commissary. 3. That a regimental committee, consisting of a captain and two subalterns, be appointed to manage the same, and to superintend the distribution, with a sergt, sergeant under them, assisted by a private if necessary. 4. That the committee be allowed to draw, on the requisition of the president, from the commissary twice a week such quantities of the different articles specified in the schedule as they can conveniently take over, or may be likely to require for three or four days. 5. Tea, sugar, and such other articles as are usually required for the soldiers' meals, are to be paid for out of the charge for messing; but beer, porter, tobacco, &c., will be stopped daily from the pocket money of the men. 6 A pint of porter shall constitute the limit of daily issue to each man; that his be confined to those who desire it, and who enter their names on a list (to be kept by the captain for that purpose) before ten o'clock on the day on which it is to be drawn. 7. That the issue of beer or porter to the men be made at the dinner hour, and at no other ... except in the case of those who may be on duty at the ... hour, when it shall be issued to them as soon as they come off ... that issued to the officers to be confined to one sp cified hour, ... shall be named by the command officer; and that the store be kept under direction of the committee for the sale of all other articles. 8. That all money received at the store be paid over to the committee every morning, and by the committee to the paymaster at the end of every monthly period, to be by him remitted to the commissary, with the sums charged on the daily requisitions of the captains of companies.

These regulations, evidently conducive as they are to the benefit of the men themselves, are said to have given general satisfaction. There is, amongst some of the "thirsty souls" of the force, a desire that the maximum of beer should be extended; but amongst the obstacles is the necessity of harbouring supplies which, when the army is in active service, cannot be transferred from place to place with quite as much facility as from a London brewery to the cellars of the tavern-keeper.

THE TICKET-OF-LEAVE SYSTEM.—The Assistant-Judge, on taking his seat at the Middlesex Court on Tuesday observed that it was stated on the previous night, by Mr. Fitzroy, in the House of Commons, that 1196 tickets of leave had been granted to convicts, of which three only had been revoked. That was a cheering view of the system; but it should not be forgotten that the committals for theft, which for the last few years had been gradually decreasing, were, since the establishment of the ticket-of-leave system, frightfully on the increase. The committals for this county alone for the present year up to the 12th of June exceeded by upwards of 400 the number committed in the same period last year. He did not by any means intend to say that this increase was caused by the ticket system; but it was, to say the least of it, a remarkable coincidence.

A general strike of the Nottingham joiners has taken place within the last ten days. They refuse to be employed by members who use machine-made mouldings.

CHESS.

March Pawns to the adverse Royal rank.
SIGNOR D is thanked for his attention, and shall hear from us on the subject of his letter speedily.
V. H. L., Brussels.—An acknowledgment of the receipt of your welcome packet has been dispatched.
M. de R., Paris.—Full particulars shall be forwarded in a few days.
ENQUIRER.—1. The duties of Secretary to the Northern and Midland Counties Chess Association, are performed for the time by some active member of the place where the annual meeting is appointed to be held. The Secretary for the present meeting is Mr. Morton Sparke, of Liverpool.
F. F. M.—Apply to the Score any of the St. George's Chess-club, 53, St. James-street, Piccadilly.
A. T., HOLMEWOOD, and others.—The forthcoming gathering of Chess-players at Liverpool is likely to be the most numerous the association has ever had. The amateurs in Yorkshire are likely to be the most numerous the association has ever had. The amateurs in Yorkshire are pretty sure to muster in great force; and, from the spirit shown by Manchester and the neighbouring towns last year, there is no doubt whatever that the Lancashire amateurs will do their duty.
ARRAGON.—No rare is the work of Viscut (1495), that we never yet met with any person who had seen a copy. It is not improbable that some day a copy may be discovered in one of the old Spanish libraries; and, whenever this happens, the book will form a great prize.
2. The first edition of Lopez was published at Alcala (1561). It was translated into Italian by Tarsia, and published in Venice (1584). 3. The Catalogue of Chess Literature by Amos Schmid is the most copious account of Chess books we at present possess; but it is imperfect, and very inaccurate. You should consult Kenmann, who is a much more reliable authority.

		51. P takes P	K takes P
		52. P to K 6th	P to Q Kt 4th

And after a few more moves the game was drawn

(a) Until lately a very troublesome move, subjecting Black to the first [illegible] at work under most disadvantageous circumstances, from his being without the protection of the K B Pawn.
(b) In a subsequent game, to test the strength of the attack in all ways, Black took the Q P with Pawn here, but got a very bad position by the capture.
(c) P to K 5th would have given White a fine attack, but the move made is, perhaps, sounder.
(d) This affords Black temporary relief.
(e) Black is now enabled to exchange Queens, and free his game considerably.
(f) But for this he either Rooks would have to change immediately.
(g) Black remarked here that he had transposed his moves, he intended to play Rook P to K 3rd, which would have given White a fine attack.
(h) Well played.
(i) This was not sufficiently considered, and ought to have lost the game.
(k) It is impossible to save the Kt; and this is Black's only chance of getting something in return.
(*l*) The best move. If he had taken Rook with Rook, he would have found it difficult to save the game.
(m) The present puzzle is evidently played on both sides without very much exact [illegible]; but, if not so brilliant-lo as an accurately conducted contest, it is, perhaps more amusing [illegible] than the [illegible] moves which it replaces.
(n) Two moves since the game was almost lost to one in White's favour. The scale [illegible] now turned in the other direction, and Black has a fine attack.
(o) Here Black exchanged Rooks at this moment, instead of risking this super-refined manœuvre, he must have won by brute force in the end.

CHESS ENIGMAS.

No. 876.—By Mr. J. PHENIX.

White: K at K B 8th, Q at K B 2nd, R's at Q R 3rd and 7th, B's at K R 6th and 7th, Kt's at Q B 2nd and Q R 8th, P's on K R 4th and K Kt 4th.
Black: K at K B 3rd, Q at K B 6th, R's at K R 8th and Q B 8th, B at Q B 8th, Kt's at Q B sq and Q Kt 3rd, P's at Q 2nd and Q 6th.
White to play, and mate four moves.

No 876.—By an AMATEUR.

White: K at Q B 8th, R at K Kt 8th, B at Q B 8th, Kt at Q Kt 6th, P's at Q 4th, Q Kt 2nd and Q R 4th.
Blacks: K at Q B 4th, R at K B 4th, Kt at K R 3rd; P's at Q R 3rd, Q Kt 6th, Q B 3rd, and Q 4th.
White to play, and mate in five moves.

NORTHERN AND MIDLAND COUNTIES CHESS ASSOCIATION.—The annual meeting of the members of this association is appointed to be held on the 23rd and 24th of the present month, and no efforts, we are sure, will be wanting on the part of the Liverpool Amateurs to render it one of the most attractive gatherings the society has yet held. In the list of distinguished players invited to be present, we are glad to see the name of Mr. Lewis. This is a compliment to which Mr. L. is well entitled, and the presence of the veteran writer and player, will be hailed with pleasure by every true votary of the game.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Empress of the French is to go for some weeks to the baths of Biarritz, near Bayonne. The Emperor will accompany her thither after the United Kingdom to have been 200 tons less in the month ending the 5th May, than that in the corresponding month of last year.

The Japanese utterly deny having made any treaty or concession whatever, to or with the Russian Government.

The Roman Catholic Archbishop of Quebec has written a pastoral letter, prescribing public prayers for the purpose of drawing down the blessings of Heaven on the Allied armies of France and England in the pending war.

The vicar of Newcastle-on-Tyne has proposed a scheme for building ten new schools in that town, at a cost of £20,000.

The recent tempestuous winds felled to the ground, in Stowe-park, the most magnificent oak on the estate. The measured estimate of its workable timber is 1000 feet, and its value £100.

Immense deposits of guano are said to have been discovered on the Galapagos island, off the coast of Ecuador, situated half way between San Francisco and Cape Horn.

Mr. G. Forster, a shareholder in Liverpool, was committed for trial, on Monday, on a charge of stealing a £1000 bank post-bill from the Borough Bank of Liverpool.

A steamer, called the *Plymouth Rock*, and measuring 345 feet in length, was launched at New York, the other day.

The following Colonial prelates have been living in England during the last eighteen months or two years:—Nova Scotia, Fredericton, Quebec, Montreal, Toronto, Jamaica, Antigua, Guiana, Sydney (deceased), Adelaide, New Zealand, Gibraltar, Cape Town, Natal, Sierra Leone. The Bishop of Calcutta was in England three or four years since.

A brilliant entertainment was given at Washington, on the 24th ult., in honour of the anniversary of the birth of her Majesty. Lord Eglin, all the foreign Ministers, the President, Cabinet, and nearly the entire Congress of the United States, were present.

The market price of Newcastle coals at Constantinople is 70s. to 85s. per ton. A few months ago it was from 30s. to 25s. per ton. Great efforts are making to obtain a sufficient supply from the mines of Ercell, on the Black Sea.

Two children were nearly poisoned the other day by chewing morse s of glazed visiting-cards with which they had been playing.

A first experiment of the electric telegraph was made on the 5th between Madrid and Guadalajara, and was perfectly successful.

The American Senate have voted a gold medal to the officers of the British steam frigate *Virago*, and 100 dollars to each of her crew, for rescuing Lieut. Strain and his party.

The resources of the fishing grounds on the eastern coast of New South Wales are about to be tested by a joint-stock company, under a vigorous management.

The Vicar of Peterborough has commenced a system of open air preaching, and announces his intention to persevere in it during the summer months.

The guests of the Clarendon, one of the most fashionable hotels in New York, are now waited upon by female waiters. The girls are selected for their neat habits; healthy, cleanly appearance; and are dressed in plain uniform.

A party of nearly 200 ladies and gentlemen of Dover and its vicinity, arrived in Paris on Tuesday evening, for a week's sojourn. Their object being to visit the public institutions and places of note, they had been honoured by his Excellency Count Walewski, the French Ambassador at London, with a letter to the Minister of the Interior at Paris, with a view to facilitate their wishes.

The redemption of the Public Debt of the United States is gradually going on at the rates adopted by the Treasury. The terms proposed are highly satisfactory to the holders, who realise a premium of 23 per cent on stock that was originally issued at par.

A Parliamentary return published the other day shows that thirty soldiers were flogged in the United Kingdom during the year 1853. In no regiment was more than one punished, with the exception of the 49th and the 2nd battalion of the Rifle Brigade, in each of which there were two.

Marshal Prince Paskiewitsch, Generals Luiders, Chrulef, Nachimoff, Dannenberg, and other military notabilities of the Russian army, are all said to be suffering from fever, the effect of the exhalations from the marshy regions where they are encamped.

The *Great Britain* steamer, which sailed from Liverpool on Monday for Port Phillip, took out about 450 adults and 90 children as passengers, besides £30,000 specie in gold.

Large numbers of hardworking, steady, industrious persons have already arrived in Australia from Germany; and an agency has been opened to encourage and aid the movement, on the principle of "assisted emigration."

The health of the Pope is said to be declining rapidly, and the affairs of State are more than ever in the hands of Cardinal Antonelli, who, they say, is already looking towards the Papal chair.

In the Fermoy Union (county Cork) there were 720 paupers in the week before last board day, which was only one-half the number in the house at the close of the corresponding week in 1853.

There is a rumour of a mercantile failure in the worsted trade, with liabilities in Bradford to the extent of £100,000.

In a recent steam-boat explosion, at San Francisco, it was proved that the engineer, who was killed, had fastened an oar over the safety-valve of the boiler in order to make more steam.

M. A. Vivien, ex-Minister of Justice and Minister of Public Works in 1848, died the other day at Paris.

Letters from St. Petersburg state that it was rumoured the Russian Government intend making a loan in Holland.

The *Dundalk Democrat* describes the emigration which is taking place from the north of Ireland as extensive as to threaten the depopulation of the country in a very few years.

The *Cheapside*, which arrived from Sydney a few days ago, brought seven bales of New South Wales cotton.

M. Etienne Arago, the celebrated astronomer, who fled from France in consequence of having taken part in the affair of June 13, 1849, has just received orders from the Belgian Government—he is charged with plotting against the French Government—to quit Belgium in ten days.

The first shot fired at the bombardment of Odessa was by a Nelson, the younger brother of the present Earl.

Count Kilvert, the eldest son of the late Joseph Henry, Esq., of Strafan, and of Emily Elizabeth, sister to the Duke of Leinster. On his marriage in 1854 with the Baroness Grey de Ruthyn, heir of the second Marquis of Hastings, he assumed the surname of Yelverton.

The latest Sydney advices report the sailing of vessels to London, now on their way, with gold-dust worth about one million and a quarter sterling on board.

The cholera has again made its appearance in Glasgow eighteen cases had occurred within four days, and a number of deaths.

A private of the 41st Regiment, Templemore, died suddenly, while on guard, last week. At the inquest on his body, the jury returned a verdict to the effect that he had died from the pressure of the boot.

The projected Roman Catholic University is making way. The total sum contributed for it amounts to £50,000.

The carver of the saloon in the steamer which brought over the King of Portugal is tapestry, containing illustrated scenes from "Uncle Tom's Cabin."

There is at present a vessel in the Thames, about to sail with goods to Melbourne, of no more than forty seven tons burden.

The King of Naples has prohibited the export of sulphur from Sicily to any port of any of the belligerent nations.

A fugitive slave, in the employ of Clark and Pond, millers, at Fulton, New York, sent a barrel of specimen flour to Queen Victoria. Soon afterwards he received an autograph letter from the Queen, acknowledging the receipt of the flour, and enclosing 300 dollars in return. *American paper.*

An extensive strike for higher wages has taken place among the labourers employed in the drainage works in King's County. Several cases of incendiarism have occurred since the strike began.

The Rev. P. Campbell, of Caputh, has been appointed Professor of Greek, in King's College, Aberdeen.

The *Cambridge Chronicle* says, that there is in the possession of Mr. Charles Marsh, of Fordham, a pair of gloves, reputed to have been worn by Oliver Cromwell. They are made of strong beaver, richly fringed with heavy drab silk fringe, and reach half-way between the wrist and the elbow.

THE ILLUSTRATED LONDON NEWS.

No. 689.—VOL. XXIV.] SATURDAY, JUNE 24, 1854. [WITH A SUPPLEMENT, SIXPENCE.

THE WAR, THE MONEY-MARKET, AND THE MINISTRY.

THE premature, if not absolutely false, announcement which was made on Monday morning, by a journal whose influence is unfortunately as great over the Money-market as its pro-Russian tendencies are notorious—to the effect that the armies of the Czar had received orders to retire behind the Pruth, caused a rise of two per cent in the British Funds. The Exchanges of Paris, Vienna, and Amsterdam appear to have been acted upon in a similar manner. We will not take it upon ourselves to allege the existence of a conspiracy to produce a general advance in the price of Public Securities throughout Europe; but, when it is remembered that the promulgation of the unfounded announcement was simultaneous with the publication of the terms of a Russian loan, amounting to £7,000,000 sterling, and that the obvious effect of a rise in the Funds at London and Paris was to facilitate this financial operation, it is difficult to avoid coming to the conclusion that the falsehood was deliberate, and planned in the interest of the Czar. The *Fremden Blatt*, an obscure Viennese journal, that will no doubt be as much surprised as the people of Vienna at the notice thus taken of it, was the sole authority for the "good news," which the most important newspaper in England re-issued with such complacency. But measures like these, though they may produce the momentary result anticipated from them, are certain to be exposed; so certain, indeed, that it seems unaccountable how any respectable journal should lend itself to their accomplishment—unless upon the supposition that inadvertency or credulity, and not design, was the cause of the error. However this may be in the present instance, the Czar will take nothing by the tactics of his financial allies. Great capitalists, anxious to turn their money to advantage, will not consider the morality of the war in which his wicked ambition has plunged the world. If his ultimate triumph were probable they would, doubtless, be willing to lend him money to carry it on, were his objects a hundredfold more atrocious than they are. But his retreat behind the Pruth, supposing the rumour to be realised hereafter, will not be allowed to end the war. So great an offender cannot escape the consequences of his crime by merely pleading guilty. Whatever may be the fears and liabilities of the German Powers, Great Britain and France have none. They neither fear the might of the Czar nor have entered into any compact with him or others to abstain in the moment of victory from punishing him for the past, or restraining him for the future. He may calculate that his retreat behind the Pruth would detach

VARNA BAY AND LANDING-PLACE.—(SEE NEXT PAGE.)

ARRIVAL OF OMER PACHA AT THE CUSTOM-HOUSE, VARNA.—(SEE NEXT PAGE.)

...stria, and consequently all Germany from the alliance against him, and may build his trust upon the delays of renewed negotiations, upon the chapter of accidents, and upon the fortunes of ...ter campaign; but happily the Western Powers are much too ... too clear-sighted, and too resolute, to allow the defection Germany, present or proximate, to influence their operations. ...ing what will, their course is clear before them. The Czar ...rself has taught them the value of "material guarantees;" and ...ch guarantees they will exact, however humiliating to his pride, ...numous to his position.

While the Money-market was thus agitated in the morning, the ...te of Great Britain was stirred in the evening in a nobler ...ion. Lord Lyndhurst drew the attention of Parliament to the ...emberg Memorandum, and to the supposed understanding be... Austria and Prussia on the one side, and Great Britain ... France on the other, that the war should, under no circumstances, lead to any territorial changes in the position of Russia or Turkey. The noble speech of his Lordship upon this point, and upon ... general conduct of the war, will not die with the occasion which ...ed it forth. Clear, forcible, honest, and patriotic, it rose to the ...gnity of true eloquence; and it will excite, not only in this, but in ...y foreign country where it may penetrate, a responsive echo of ...tion against the Russian Autocrat, or of agreement as to ... sures to be taken against him in the future. Whether ex... the false ambition which produced the war, or in denouncing folly of allowing so great an offender to escape punishment, ...Lordship was equally felicitous. The debate that ensued is ...y of historical importance.

...rd Lyndhurst, with the skill of a practised lawyer, and the ... of a veteran statesman, showed the impolicy and injustice of ... to any agreement for respecting the existing limits of the ...an empire. Agreements made before a war, have reference ...state of things which a war annuls, just as the regard for the ...e and liberty of an individual, which may be justly entertained ...hile he has committed no offence greater than a simple breach of ...ace, may, and ought, to be set aside, after he has ...ded highway robbery and assassination to the catalogue ...f his misdeeds. Lord Lyndhurst proved to demonstration that Europe has, and ought to have, certain well-... objects to attain in the present war—and that no treaty ...h so "shuffling," "pettifogging," and "mendacious" a potentate ... the Czar, or with his equally shuffling and mendacious diplomatists, was of higher value than waste paper. These ...jects are the freedom of the Danube and the Black Sea, ...d a guarantee against any renewed aggression upon Turkey ... ther to these should not be added the independence of ...ssia, and the restoration of the Crimea and of Finland to their former owners, is a question that, if Europe were polled tomorrow, would, in all likelihood, be decided in the affirmative by a large majority. To allow the Czar to wipe off all scores by the ... withdrawal of his felonious armies into his own ter..., would be, indeed, an act of most unparalleled and ...ic stupidity. In the first place it remains to be ...ained whether he cannot be ignominiously driven across the ... and whether his possible withdrawal is not one of those ... which merits no other response than the proverbial ...k you for nothing." In short, the attempt to create a feeling that the object of the war will be attained when the Turkish ...story is evacuated by the Russians, either voluntarily, or after ...heir signal discomfiture by the brave Turks—who seem as if they will perform the feat unaided—or by the Turks and the Allies ... ...ored, is a transparent manœuvre of the friends of the Czar. The temporary peace that might be attained by such dishonourable pusillanimity would be but the precursor of a war far more ... and terrible than the one which is now raging. As Lord ...dhurst truly says, we must "exact from Russia a pledge, or a ...gage, upon something valuable—upon something that she ... not like to risk the loss of if she violated her faith; for her ... guarantee, her faith, her honour, and her word—they are, ...and all, valueless."

The speech of Lord Clarendon in answer to, or rather in exposition of, that of Lord Lyndhurst, was equally satisfactory. ...e Foreign Minister spoke like a man of large and statesman-... views—like a man whose mind was made up—like a hater of ...chood and rapacity—and like a Minister who knew how to ...old the honour of the country in whose service he ranks so ...igh. "The policy and power of Russia," he said, "are dan...ous to the well-being of Europe: they are dangerous to its ...gress and its civilisation. The object of Europe must be to ...rtail that power, and to check that policy; and if this opportunity of doing both be neglected, it will be vain to hope that ...ch a one will ever occur again. All Europe is not to be disturbed—great interests are not to be dislocated—great commercial ... social risks are not to be run—and the greatest powers of ...rope are not to be united in arms, for an insignificant result." These are great words. They are toned to the right pitch; and will reverberate through the civilised world.

But while the Foreign Minister speaks in this emphatic manner, what says the Prime Minister of England? Lord Aberdeen, it ...ppears, retains his confidence in his "friend" the Czar. He cannot feel that "what is called the security of Europe is in very much ...anger by the chance of Russian aggression." He admits the treaty ... Adrianople to have been "onerous and disastrous," but considers that, as the Russian army at the time was within fifty miles of the gates of Constantinople, "the treaty did not show any great deof territorial aggrandisement" on the part of his friend the Emperor. "And what," says his Lordship, "has happened since that ... was made, twenty-five years ago? Since that moment has Russia acquired a single inch of Turkish territory? Has Russia had any hostility with Turkey at all? None in the world. The only interference that Russia has had with Turkey has been to save the existence of the Turkish empire by sending a Russian army to ... Constantinople to protect it against Egyptian invasion. That is ...l that has happened since the treaty of Adrianople. There has ... been no war, there has been no aggression, but only a signal ...ervice rendered to Turkey by Russia. I think that if we can secure tranquillity for twenty-five years to come we shall not do ...ch; and that ought to be the object we should have in view."

We need make few comments upon such a speech as this—so utterly at variance with historical fact, and with the feeling and common sense of the country; so utterly at variance, also, with the recorded opinions of Lords Clarendon, Palmerston, and John Russell; so unworthy, we may add, of his Lordship's own reputation and high position. To secure peace for twenty-five years—by another disastrous treaty of Adrianople, we suppose—will satisfy the Premier; but it will not satisfy England, it will not satisfy France, it will not satisfy Austria, it will not satisfy honour, it will not satisfy justice. But, we may ask, is the nominal Premiership of his Lordship essential to the maintenance in power of the present Ministry? If it be, the country, we suppose, must continue to bear the infliction; for a change of Administration at the present time would be in a high degree inconvenient to the public service. But, surely, if Sir George Grey can be introduced into the Ministry without damage, and if unoffending Mr. Strutt can be as cavalierly ousted, as if he were a junior clerk in the Custom-house, Lord Aberdeen may be induced to retire into private life without any very serious consequences. Either Lord Clarendon, Lord Palmerston, or Lord John Russell would be a Premier in whom the country would have confidence; and we are not aware of any insuperable difficulties that should prevent the other members of the Administration from acting under, as well as with, one or other of those statesmen. Lord Aberdeen has served his turn, and the sooner he retires to cultivate his heroworship in seclusion, the better for his own fame, and the better for the country.

SKETCHES AT VARNA.

UPON the preceding page we have engraved two of our Special Correspondent's Sketches, mentioned in his letter in the ILLUSTRATED LONDON NEWS of June 10th. The first scene is Varna, with the Landing-place, and the *Pembam* steam-ship lying in the Bay. The second sketch shows the arrival of Omer Pacha at the Casino-house; and the upper illustration at page 589 shows the Embarkation of Marshal St Arnaud, Lord Raglan, and Omer Pacha, as described by our Correspondent at page 541.

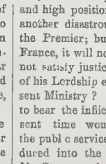
Varna lies on the north side of a semicircular bay, about a mile and a half in length and two miles across. The bay sloats up to the beach at the apex of the semicircle formed by its shores, and the land is so low at that point that the fresh waters from the neighbouring hills form a large lake, which extends for some distance through the marsh lands and plains that run westward towards Schumla. Varna is built on a very sightly elevated bank of sand, on the verge of the sea, of such varying height that, in some places, the base of the walls around it is on the level of the water, and at others twenty or thirty feet above it. Below this bank are a series of plains inland, which spread all round the town, till they are lost in the hills. A ridge, dipping into the sea in an abrupt promontory on the north-east side, rises in terraces to the height of 700 or 800 feet at the distance of three miles from the town and trend away to the westward to meet the corresponding chain of hills on the southern extremity of the bay, thus enclosing the lake and plains between in a sort of natural wall, which is, like all the rest of the country, covered with brushwood and acacia trees. A stone wall of ten feet high, painted white, and loopholed, is built around the place, and some detached batteries, well provided with heavy guns, but not of much pretension as works of defence, have been erected in advance of the walls on the land side. On the sea, while four batteries are erected, provided with heavy guns and mortars, a line of earthwork artillerists, &c. (whether bona fide or simply for show and rehearsal we cannot say) above these walls, in an irregular jumble of red tiled roofs, are the houses of the place, with a few minarets towering from the mass above them. I counted eight 32-pounders, and there were two or three 68-pounders on the upper batteries, overlooking the entrance to the harbour.

Over the principal gates of the town, and in front of a few yards of the sea and the foot of the wall, we have as a landing-place for our troops. On this beach are heaped up huge quantities of shot and shell, of every size, all rusty and rotted. Here you may tread on the round cannon-ball, and range in the horizontal bomb, or shell. Whence they came, or for what they are intended, I could not ascertain, but most likely they were used or ... against the Russians, though but ill suited for that purpose by their ... There are, however, some round and ... guns here. In the line wall, just at the same place, are about ... Turkish soldiers, a mill of the raskiest, roughest, and most ill-made ... that can be conceived.

OBITUARY OF EMINENT PERSONS.

THE RIGHT HON. HENRY TUFNELL.

MR TUFNELL died on the 15th instant, at Cation-hall, Derbyshire.

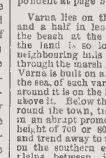


He was the elder son of the late William Tufnell, Esq., of Chichester, M.P., by Mary, his wife, daughter and co-heir of Hugh Darlington, Esq., and grandson of Colonel George Foster Tufnell, M.P., younger brother of John Jolliffe Tufnell, Esq., of Langleys, Essex. So far back as 1640, Richard Tufnalle, of Clapham (Mr. Henry Tufnell's direct ancestor), sat in Parliament for Southwark.

Mr. Tufnell, who was born in 1805, and graduated at Christ Church, Oxford, in 1829, went to Ceylon as Private Secretary to Sir Robert Wilmot Horton. He was subsequently Private Secretary to the Earl of Ripon, when First Lord of the Admiralty; was a Lord of the Treasury from 1835 to 1841; and finally filled the important office of Secretary to the Treasury from 1846 to 1850. In 1845 he contested, unsuccessfully, the borough of Colchester; in 1837 was returned for Ipswich (although unseated on petition), and represented Devonport from 1840 to 1853. On his retirement from the House in 1850, he was sworn of the Privy Council. Mr. Tufnell translated Müller's "Dorians," in conjunction with G. C. Lewis, Esq. He married first, in 1830, Anne, eldest daughter of Sir Robert Wilmot Horton, Bart., which lady died in 1842; secondly, in 1844, Frances, daughter of Lord Strafford, who died in 1846; and, thirdly, in 1848, Lady Anne Primrose, daughter of the fourth Earl of Rosebery.

SIR HENRY BLACKWOOD, BART.

THE death of this youthful Baronet, Lieutenant of H.M.S. *Leander*, took place at Athens, on the 26th ult., after an illness of four days. Sir Henry had just completed his twenty-sixth year. Having chosen the profession of his father and grandfather, he became acting mate of the *Hastings*, 72, on the East India station, in 1850; was promoted to the rank of Lieutenant in 1851; was subsequently appointed to the *Prince Regent*, 90; and finally served as Lieutenant of the *Leander*.



The family of Blackwood has long been connected with our naval annals. The Hon. Sir Henry Blackwood, K.C.B., G.C.H., the first Baronet—a very distinguished Admiral—commanded the *Euryalus* at Trafalgar, and was the bearer home of the despatches which announced that great victory. His son, Sir Henry Martin Blackwood, second Baronet (father of the young officer whose decease we record) was also in the Navy, and attained the rank of Post-Captain.

The Baronetcy now devolves on Francis, the next brother of Sir Henry. He was born 11th November, 1838.

AN AMERICAN FRIGATE IN THE BLACK SEA.—A letter from Belcos, of the 4th, states that the *Cumberland* frigate, on board which was Commodore Stringham, the Commander of the American station, has made a reconnoissance in the Black Sea.

ROYAL DISPENSARY FOR DISEASES OF THE EAR.—The annual meeting of this institution was held at the dispensary, Dean-street; Rev. T. Davis Lamb in the chair. The report detailing the progress of the institution was read by the secretary. Mr. Harvey, the surgeon, drew the attention of the meeting to the very large increase of patients, the numbers being, as he stated, 2693: of these, 610 had been cured, 501 relieved and the remainder were still in attendance. The sermon, preached by the Bishop of St. Asaph, had much improved the funds, which were still inadequate to the numerous applications for relief. A vote of thanks was passed to the chairman, and to Mr. Harvey for his services, and the meeting separated.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

En attendant the departure of the Emperor and Empress for the separate excursions, they hold every Sunday evening at St. Cloud a reception of an intimate character, to which are admitted none but those personally known to, and favourably distinguished by, the Majesties.

Though the season, properly speaking, has been some time terminated, the persistence of the cold and rain has kept so many persons in town, that evening receptions in general continue to be held, and pretty numerously attended, and the theatres rejoice in abundant audiences.

On Sunday prayers were offered up in many of the churches for a change of weather, which it is most earnestly to be hoped they will shortly bring, as the disasters which the present state of the climate threatens, become daily more imminent. Happily there is yet time, but the immediate arrival of warmth and dryness, to avert them; it is from *rouges*—as strawberries, currants, cherries, &c., are here called—have suffered astonishingly little from the want of sunshine; indeed the cherry produce an unusually abundant crop, and of a large size, though some what wanting in sweetness and flavour. In the neighbourhood of Lyons the torrents of rain that have fallen have produced a singular phenomena, for the sudden appearance of springs bursting from the earth where no symptoms of their existence were before manifest. Another remarkable feature attending the present meteorological crisis, is the state of the barometer, which seems entirely at fault, no two instruments agreeing and all veering about from fine to wet, from temperate to hot, from variable to fair, without any change following in the state of the weather or temperature.

A considerable sensation has been produced here by the arrival of Lieutenant Jerome Bonaparte, grandson of the Prince Jerome, by his marriage with Miss Patterson, contracted during his stay in America and known off by the name of Comte de Survilliers. He comes to Paris on an invitation from his grandfather and the Emperor; his resemblance to Napoleon I. is like that of his uncle the Prince Napoleon, strikingly. The Duc d'Albe, and the Comtesse de Montijo, mother to the Empress, are also among the arrivals in Paris.

A sale of the utmost interest and importance, in an artistic point of view, calls here the attention of amateurs of all nations. It consists of the collection of the pictures of the late Madame Soult de Dalmatie, among which are four immense cartoons of Jules Romain; forming part of a set of six designed to represent the history of Scipio Africanus, by Rembrandt, Jordaens, Paul Veronese, Philippe de Champagne, Boucher, and others of the first masters.

The Museum of the Thermes and the Hôtel de Cluny has just been enriched by a most interesting and valuable relic, purchased by Government from the late Comte de Bruce. It is a ... presented to the same collection some other objects, only second to the one in question for rarity and interest. The ... specimen of art consists in the famous ... given by Francis I., Emperor of Germany, to the Cathedral of Bâle. It is composed of ... gold, chased in high relief, and represents five figures of ... half a yard in height—representing the Saviour in the centre, surrounded by the Archangel Michael, St. Benoît, and the angels Gabriel and Raphael; while before him are prostrated the figures, of much smaller proportions, intended to represent the Emperor Henry II., and his wife Cluégonde. The whole of the work of the most exquisite execution; and the ornaments, symbols, &c., singularly beautiful, and enriched with precious stones. The articles presented by the Colonel de Theubet on the occasion of a golden rose of Sharonmanship, given by one of the Popes to the Cathedral of Bâle; a magnificent carpet, embroidered in gold and silk, with the arms of the thirteen Swiss Cantons; and a linen cap, trimmed with guipure, belonging to Charles V., Emperor of Germany, worn under the helmet, which bears every proof of the authenticity of its origin.

The Grand Opéra is drawing the most brilliant audience the season can afford, for the début of "Robert le Diable," with Cravelli. The Français has a very pretty and well-played piece, "La Soupe d'un Nabab," by M. E. Plouvier; and the Variétés, a sufficiently comical "Promenard and Panadier." The Porte St. Martin is preparing a spectacle with the utmost magnificence its great resources of mise en scène can produce, entitled "Schamyl." Some idea of its splendour may be conceived from the fact that the costumes, amounting to the number of 800, have been designed by well-known artists from the magnificent collection of the Prince Gagarine.

THE ANGLO-FRENCH ARMY IN ATHENS.

Several statements have been received from Greece within the last few days, which speak of severe losses inflicted on the Turkish forces by the Greeks; but they are all exaggerated reports of former occurrences. To all appearance the Greek insurrection is now pretty well over. A letter from Admiral le Barbier de Tinan to the French Minister of War, dated June 7, gives the following satisfactory report of the state of affairs in the Piræus at that period:—

The most complete tranquillity reigns at Athens, as well as in the Piræus. They are most hospitable soldiers, so good, so gay, so easily consoled for their misfortunes. They have received sympathy. The soldiers of the Greek army willingly fraternise with ours. There is not any reason for the least fear, and I gave the permission in question, even in the interest of discipline. The Minister of France was, like myself, of opinion that the sight of the French uniform could only exert a favourable results. The natural position of the troops has also improved that is to say, the establishment of the camp is in course of organisation and completion.

The English troops, an escort of 1000 men, arrived here on the 4th. We gave a salute on their arrival. The landing took place yesterday, in the afternoon, by means of the boats of the English and French vessels of war. An Austrian schooner, anchored in the roads, also assisted in the landing of the English troops, and this proof of sympathy and concordance of opinion struck everybody, and particularly the inhabitants of the Piræus, who have hitherto had doubts of the part which that Power would take.

UNITED STATES.

The *America* steam-ship, which left New York on the 6th inst., arrived at Liverpool on Monday. Nothing of importance had been transacted in either House of Congress. Upon the subject of the relations between the United States and Spain, the *New York Herald* says:—"We have received telegraphic despatches were received on Sunday from Washington, stating that the President had determined to send a message to Congress during the week, recommending extreme measures towards Spain. We have ample authority for stating that no such message will be sent."

THE BOULOGNE CAMP.—Upwards of 8000 troops are already concentrated at the Boulogne Camp; and, by the 15th of next month, that number is to be increased to 50,000, when it is expected that they will be reviewed by the Emperor, and grand fêtes will take place in honour of the imperial visit.

A DISTINGUISHED FOREIGNER.—Among the passengers who arrived at Southampton on Sunday, in the Indian mail-steamer *Colombo*, was his Highness Dhuleep Singh, the late Maharajah of Lahore, and the youthful and dethroned monarch of the great Sikh kingdom. He is the son of the late Runjeet Singh, the "Lion of the Punjab," by his mother was the Ranee who gave such trouble to the British authorities. He became the owner of the celebrated Koh-i-noor, or Mountain of Light, now in the possession of the Queen of England. On his journey he was attended with distinguished honours by the British authorities at every port at which he touched. At Malta he visited and dined at Southampton, and at Gibraltar a salute was fired in honour of his presence. His suite consists of Dr. Logan and a number of Sikhs, the latter dressed in the peculiar costume of the rich and warlike people of the Punjaub. He had on board also a superb Arab charger for equestrian exercise in this country. Dhuleep Singh is sixteen years of age, rather tall and slender, and exceedingly well formed. He speaks and East Indians usually are. His face, rather long, but his features are regular, after the European type. His servants and friends, not to be reserved before strangers. He dined with the passengers on board the *Colombo*, and occasionally played chess in the saloon. He speaks English well, and is a Christian, being a member of the Church of England. His object in coming to England is to study the manners and customs of this country.

COST OF THE BLOCKADES TO RUSSIA.—The enormous loss to the Russian Government as to private individuals of the blockades now enforced in the Black Sea and the Baltic, may be conceived from the fact that for a year before last, about 3800 vessels entered, and nearly the same number quitted, various Russian Baltic ports, the whole of the latter fully laden. The same is applicable to the Black Sea, where 2600 vessels entered, and the same number left, Russian ports, carrying with them cargoes of national produce.

THE WAR.

THE SIEGE OF SILISTRIA.—RETREAT OF THE RUSSIANS.

THE gallant resistance of the Turkish garrison has at last been crowned with success. On the 15th the Turks made a sortie from Silistria, aided by additional forces from Schumla, and drove the Russians across the Danube. Pursuing their advantage, the Turks crossed an arm of the river, seized the opposite island, and destroyed the siege works of the Russians, who had by that time fled to the Wallachian bank of the river. The Turks then brought out their guns from Silistria to play on the retreating enemy. This total defeat of the Russians quite upset the plans of the Czar, as it had been preceded by extensive movements with the object of reinforcing the army of Prince Paskiewitsch. The Russian commander, who had been seriously wounded some days before, and who is said to be threatened with paralysis of his left arm and leg, had received peremptory orders from the Czar that Silistria must be taken speedily, and at any cost. When this order arrived, the Russian army was in a most wretched plight. The men were downcast and utterly dispirited by the repeated repulses they had sustained. All the chief officers—Prince Paskiewitsch, commander of the entire army on the Danube; Prince Gortchakoff, commander of the investing corps; and General Schilders, director of the siege works, had been severely wounded or disabled while vainly striving to inspire the miserable serfs under their command with enthusiasm. The Turks, on the other hand, were elated with previous success, and rendered confident by the reinforcements from Schumla. The despatch from Silistria gives no precise intelligence regarding the arrival of Omer Pacha's army; but a letter from Vienna of the 16th inst., states that, on the 5th, Mehemet Pacha, with 15,000 Irregulars, had entered the garrison, and that Omer Pacha was at the fourteen miles to the north of Schumla, with 84,000 men. A previous despatch states that the vanguard of the relieving forces co-operated with the garrison in the affair of the 13th, when General Schilders was wounded; we may justly infer, therefore, that, on the 16th (two days later—the whole of those forces would be ready to assist the brave garrison of Silistria in driving the Russians across the Danube. In the presence of such an army, fight to Wallachia was the only course left to the Russians. At the latest date they were in the neighbourhood of Kalarasch, awaiting reinforcements and orders. At Vienna it was thought that the Russians would find it impossible again to employ the same troops before Silistria, demoralised as they are by constant failure; and that, being unable to replace them in sufficient time, Marshal Paskiewitsch would give orders to fall back on Jassy. The division under General Liprandi was said to be marching in great haste from Slatina to Silistria; but it will now be too late to prevent the severe blow which the Russian forces have sustained by so ignominious a defeat.

The *Journal de Constantinople* gives an interesting account of the attack made by the Russians on the south-west outworks of Silistria on the night of the 29th. Three storming corps of 10,000 men each were formed, with a battalion of engineer sappers, with fascines and scaling ladders at their head. Before the men set to work, they were addressed by Prince Paskiewitsch, who urged them to exertion, "as if they did not succeed in taking the fortress, he should be obliged to keep back their rations." After this encouragement, two of the corps marched towards the forts of Arab Tabia and Yelanli; the third corps was to act as a reserve. After a terrific cannonade, the storming parties advanced, but were received by the Turks with such a well-directed fire that, for a time, they made but little progress; indeed, the redoubts opened so terrible a fire of grape and shell upon them that, if they had been made of iron, it would have been impossible to stand against it; they were therefore, obliged to fall back and retreat. But, almost immediately, without interrupting the fire, the commander deployed all his forces, and brought back his columns to the assault with so much violence that the Russian troops reached the embrasures of the redoubts, through which they tried to enter; and, having managed to scale the breastwork of one of the batteries, a regular hand-to-hand fight took place. At last the Turks were victorious, and the besiegers were knocked into the ditch with the butt-end of the Turkish muskets. The Russians had evidently lost courage; and when they returned to the attack, it was only because they were forced to do so by their officers. When there was literally no more fight in them, a retreat was sounded, and the Russian troops scurried off as many of their dead and wounded as they could. The Turks, after the enemy had retired, picked up 1500 dead bodies, a great number of guns, swords, drums, musical instruments, and the colours of a battalion. The beg, the Commander of the two forts, displayed the most daring courage, "as did two Englishman and a Prussian." The Turkish loss only amounted to one hundred and fifty men killed and wounded.

General Schilders, who has lost a leg, lies in a dangerous state. He is advanced in years, and of nervous temperament. Prince Gortchakoff's wound is severe. General Lüders, who is also wounded, is said to be doing well. Count Orloff, jun., lingers without hope of recovery.

The latest news from Schumla confirm the report received otherwise of the death of Moussa Bey, the commander of the Arnaouts. He was shot by a rifle ball, which entered his left side, and he died twelve minutes afterwards. This is a great loss for everybody. Mahmoud Pacha, Vizier, and Hussein Pacha replace him. Moussa has died poor, though he refused 2,000,000 of roubles offered to him by Prince Paskiewitsch to betray Silistria. The Sultan has granted a pension of 30,000 piastres to his family.

THE BLOCKADE OF THE BLACK SEA.

The French and English fleets appear to be mainly occupied in maintaining a strict blockade of the mouths of the Danube, and of the Russian ports in the Black Sea. The results are, no doubt, most galling and disastrous to the Russian army of occupation, as well as to the powerful fleet at Sebastopol, but their orders evidently are not to venture an engagement, unless they are two or three to one, against the enemy.

On the 2nd inst. the *Vigilant* and *Tybaldie* towed six Russian and Dutch vessels into Baljik, with stores and contraband articles, average £2000 each. £12,000 will have to be divided between the two ships

CIRCASSIAN VICTORIES.

The *Egyptus*, which left Constantinople on the 10th, has brought intelligence to Marseilles that the Circassians, after a severe engagement, have made themselves masters of the pass of Mzadok, and cut off the communications of the Russian army in Georgia.

The Ottoman steam-corvette *Essevie-Hair* returned to Constantinople on the 8th, bringing accounts from the coast of Abasia of the most satisfactory nature. It was stated that the rear-guard of the Russian corps, which evacuated Soukoum-Kaleh, has suffered a serious loss in an engagement with the Circassians, near Kutais, and that most of the other divisions which garrisoned the forts along the Black Sea had been similarly harassed in their retreat, and unable to effect a junction. The Ru sian army in Asia was thus cut off, and several of its divisions were seriously compromised. A number of Mingrelian tribes, who had hitherto remained faithful to Russia, had declared against her, and now made common cause with the Lieutenant of Schamyl.

THE CZAR'S MONTENEGRIN ALLIES.

The war with which Montenegro threatened her Turkish neighbours appears to have degenerated into feats of murder and rapine. Undisciplined and lawless bands, adventurers as bloodthirsty as they are greedy, infest the plains of the peaceful Herzegovina, where they murder herdsmen and defenceless people for the savage satisfaction of carrying about in triumph the human head. "A short time back," says a writer in the *Syrian Journal*, "fifteen human heads, after their manner, were sent and on June 1st two more, were brought to Cettinje fixed on pikes. They most likely nearly all of them belonged to the Christian inhabitants of Turkey, to poor shepherds or peasants. On the 11th of this month, on which day falls the Greek Whitsuntide festival, Prince Daniele has commanded his whole army to meet at Cettinje, where he intends distributing another 7000 brass crosses, which the warriors are to wear on their field caps as the badge of the holy war which the Prince means to begin. On this occasion inflammatory speeches will be made against the Turks, and exciting songs will be sung about the old Turkish oppressions, with a view to inflame and rouse the martial frenzy of these crusaders."

A letter from Cattaro, of the 7th, says that the Montenegrins, after meeting with several partial checks, had suffered an important defeat near Sassagredo. One corps, in which a nephew of Prince Daniele was an officer, had been entirely destroyed.

RUMOURED ABDICATION OF THE CZAR.

Notwithstanding the mystery which has been preserved regarding the conference at Tetschen, it is confidently affirmed that nothing less than the abdication of the Emperor Nicholas was on the *tapis*, and that though it may not have been the only topic of deliberation, yet that it was the principal one.

Letters from St. Petersburg speak of the great change that has taken place in the Emperor, both mentally and physically. They describe him as completely broken down in health and spirits.

Advices from St. Petersburg of the 13th state that the Emperor Nicholas had ordered Prince Dolgorouki, Minister of War, to set out for the Danubian Principalities, and to draw up an accurate report of the position of affairs in a military point of view. The operations before Silistria were especially recommended to his notice. This measure has produced a profound sensation at St. Petersburg, as the Emperor never entrusts his Minister of War with such a mission except on occasions of serious importance.

THE KING OF PRUSSIA'S INVITATION TO THE CZAR.

Various reports have appeared in the German papers, since the conference at Tetschen, relative to a proposed interview between the King of Prussia and the Czar at the frontier town of St Hapoenen. One day the report was contradicted, and the day following it was reiterated more confidently than ever. The following extract from a Berlin letter, in the *Sunbian Mercury*, speaks very confidently in the affirmative:—

The last and most decisive step for the solution of the Eastern question has just been taken. The Count de Benkendorff is the bearer of an autograph letter from our Sovereign to his august brother-in-law, in which he earnestly invites him to an interview on the frontier. All the non-official and non-official information on this news do not merit any confidence. It is on account of this projected interview that the Prince of Prussia is to be with the King at Koenigsberg. The inspection of the regiments of infantry in Prussia, and in the Grand Duchy of Posen, is only a pretext. If the Emperor of Russia does not accept this invitation, and if the reply to the Austrian Note of the 3rd be negative, the mobilisation of 150,000 men will take place immediately after the return of the King.

Letters received via Hamburg state that the Czar was unable, in consequence of ill health, to accept the invitation to an interview with the King of Prussia. It is stated in Berlin, that the Czar ordered Lieut.-General Grünwald to proceed to the Prussian frontier to compliment his Prussian Majesty. It is generally believed in this that there is no probability of the Emperor arriving before the 30th.

RUSSIAN DEMONSTRATIONS AGAINST AUSTRIA.

The military despatches of Russian troops on the frontiers of the east and south-east of the empire become more and more significant. All the railway carriages of the line from Warsaw to Mazeki have been retained by the Government for the conveyance of troops; and the functionaries of Gramea have received orders to put an end to all communications with the inhabitants of the Austrian territory. The movements of troops on the frontiers of the Bukowine are very active. Russian soldiers are stationed along the Sereth. They have already patrols on the Austrian frontiers. On the 26th May, an officer of the Austrian staff, accompanied by several superior officers, placed himself on some heights to reconnoitre the district of the Sereth. The Cossacks have already occupied several places on the frontiers; and it is rumoured that from 100,000 to 150,000 men from the provinces of Volhynia and Podolia are to be armed with espingoles.

Authentic intelligence has been received from St Petersburg, giving an account of the extreme irritation produced in the mind of the Czar by the reception of the Austrian summons, and especially by the imminent armed action of Austria. The public mind was full of anxiety. No answer had been sent to Austria up to the latest date. Some rash proceeding on the part of the Emperor was feared.

OCCUPATION OF THE PRINCIPALITIES BY AUSTRIA.

A convention has been concluded at Constantinople between Austria and the Porte relative to the Danubian Principalities. Its principal object is to prevent the Russians from returning, and the Austrian troops from entering Bucharest and Jassy until the peace between Russia and Turkey. If Russia refuses to retire, Austria will take the requisite measures to ensure her doing so. Opinions differ widely as to what is sent by the eventual occupation. This much, however, seems tolerably clear. The convention with Turkey provides that Austria will issue a formal declaration that she will not consent to the continued occupation by the Russians, and the arrangement with Turkey is an overt act against Russia. The German journals differ greatly as to the probability of a rapid occupation on the part of Russia, and the consent of Austria

BARO SOUND, GULF OF FINLAND, AND PART OF THE BALTIC FLEET AT ANCHOR.—FROM A SKETCH BY O. W. BRIERLY.—(SEE PRECEDING PAGE.)

"THE EUROPA" TRANSPORT SHIP, AS SHE APPEARED JUNE 1, SEVEN A.M.

THE LOSS OF THE "EUROPA."

The following is the account of Captain Gardiner, the commander of the transport:—

On the 31st May, the military officers were all suffering from sea-sickness, with the exception of Colonel Moore, who with myself had visited the 'tween decks and lower hold several times that day, and at nine p.m. we went and inspected every position that could be examined in the lower hold. There was no appearance of fire, and we returned to the cabin with the conviction on our mind that the ship was perfectly safe; but scarcely an hour had elapsed before we were startled by the alarm of fire. I immediately ran below, and discovered the fire burning fiercely in the fore peak, where we had stowed a quantity of hawsers, rope, tar, pitch, oakum, varnish, and sails. The officers, seamen, and soldiers, were on the spot almost simultaneously with myself, and every one exerted every effort in their power to extinguish the fire. The force-pumps, which had been fitted by orders of the Government to supply the troops with water from the tanks and butts in the hold, had hose attached to them, and, with those belonging to the ship's pumps, were taken below, and the jets directed in and upon the burning mass. The troops also worked vigorously in passing buckets of water to those below to check the progress of the flames, but to no purpose. The tar, pitch, and other combustibles, on igniting, sent forth an overwhelming blaze into the fore-hold and firing the bulk of tow which was on board for padding the horse-stalls. The heat and smoke now became so great that all hands were forced to quit the lower hold; many were almost suffocated. On reaching between decks we found flames ascending the fore hatchway in huge volumes, cutting off all communication with the fore part of the ship.

As hopes of saving the *Europa* from destruction were then past, and this at the furthermost was at half-past ten o'clock, just half an hour from the moment that the alarm of fire was raised, this will show the rapidity the fire gained. The volumes of smoke that rolled up the main and after hatchway overhung the main deck like a cloud: it was most suffocating, and the flames from both hatches chased us on to the poop. I have omitted to inform you that on my first coming on deck I ran the ship away before the wind, in order to near a barque and a brig that were to the leeward of us. The boats were lowered and filled with men. All were got clear except the long-boat, which from the beginning I saw it was impossible to get out. The last boat was taken off the skidds on to the poop, from whence we were compelled to launch it to save it from being burnt. It was then about half-past eleven o'clock; the main deck was then in an ignited state, and the masts and rigging aloft were in flames. I still kept the ship before the wind, to near the vessels to leeward and to keep the fire forward.

Nearly all on board had left the vessel by this time. Among them were all the officers of the ship, the adjutant, surgeon, and cornet of the troop, leaving Lieut.-Colonel Moore, with the veterinary surgeon, and about twenty-six soldiers on board, besides myself, carpenter, one ordinary seaman, and the cook, on the burning wreck.

Mr. Black, the Admiralty agent, and the second mate were in the last boat which quitted the ship. She was pulled away at half-past eleven o'clock. The mainmast went at two o'clock; then the foremast; and the ship rounded immediately afterwards. It was blowing very hard at the time, with a very heavy short sea on, raining heavily. I will not further dwell upon this painful moment than to add that, as the ship rounded with head to wind, the fire spread over to where we were and burnt us out, compelling us to seek shelter in any way we could. A number of men took to the wreck of the mainmast: some were lost in attempting to make it. I, with the carpenter, got over to the leeward, and found great difficulty in getting under the weather channel and making along the bands, to see if there was more unburnt wood to hold on by; but we were driven into the fore chains, the hull of which were still unburnt. Suffice it to say, that at three o'clock the boat of the brig *Clementina*, Captain Pike, came up and took us out of the fore-chains. The boat also picked up ten men from off the spars of the wreck. One man died in the boat. The noble old Lieutenant-Colonel, I regret to say, perished in the wreck. Several troopers implored him to leave the ship in the boats, but he would not leave his men, and shared their terrible fate.

THE LOSS OF THE "TIGER."

THE accompanying Sketch of the wreck of the *Tiger*, represents it as seen from the steam-frigate *Furious*, on the evening of the 15th May. In the letter accompanying the Sketch, the writer gives an account of the loss of the ship, which is pretty much the same as the one which has already appeared in our columns. He then proceeds:—

The Admiral despatched the *Furious* and *Vesuvius* to Odessa, to obtain any intelligence respecting the loss of the unfortunate *Tiger*, and also to render any assistance that might be allowed to the surviving officers and crew. We (*Furious* and *Vesuvius*) approached the town early on the 16th of May, with a flag of truce at the fore, and a Russian ensign at the main, to signify our desire to communicate. We found the Russian authorities much more civil than on a former occasion, the Governor sending a polite letter to the Captain, acquainting him that Mr. Giffard, a midshipman, nephew to Captain Giffard, of the *Tiger*, and three men, had been killed, Captain Giffard himself had been obliged to have his left leg amputated above the knee; but he, as also some others who were wounded, were doing well, and that every attention should be paid to them. He (the Governor) also gave permission to us to communicate with our countrymen by writing, and to send them anything we might wish. We accordingly made a collection of plain clothes, of all sizes and descriptions, as well as blankets, and all the clean linen we could spare (very little), and sent them to the lazaretto, where the *Tigers* were performing their quarantine. We subsequently received several notes from them, which, after the authorities had expended some time in deciphering, were delivered to us. They stated that they were allowed to write to England (overland), were well lodged, and, on the whole, comfortable; but, as they had been unable to save anything from the wreck, said they should be glad of apparel, pipes, tobacco, &c., as we could spare them, and seemed by no means to be out of spirits. We also sent them duck, flannel, soap, &c., for the men; and, in fact, every thing that could be spared or thought of at the moment. We left at 7.30 p.m. passing near the wreck, as shown in the Sketch.

The intelligence of Captain Giffard's death was despatched to Vienna by electric telegraph on the 1st inst., by the Austrian Consul at Odessa.

The *Kreuts Zeitung* states, that on June 2, at three p.m., the interment of Captain Giffard, of the *Tiger*, took place. By order of General Osten-Sacken, the whole crew, prisoners of war, as well as the Governor-General Annenkoff, with the other military authorities, attended the funeral. A Russian battalion in parade order formed an escort to the coffin, and fired the usual volleys over the grave. Nearly the whole

REMAINS OF H.M. STEAM-FRIGATE "TIGER," AT ODESSA, SEEN FROM H.M.S. "FURIOUS."

population was afoot, and followed the procession. The sturdy General Osten-Sacken took the deepest interest in the fate of the Captain during his illness. A little before his death, Giffard called the crew around his bed, and said, "Lads, you owe your lives to my being wounded; this hindered me from blowing up the ship. Farewell! Greet our dear England for me when you see it." After these words he asked for a glass of lemonade, turned his face from the sailors to the other side, and breathed his last

The condition of the crew has been provided for; and, in the House of Commons, on Monday, in reply to a question by Sir G. Pechell, Sir J. Graham said that every arrangement had been made which the Admiralty hoped would be conducive to the comforts of the prisoners of war belonging to the late ship *Tiger*. Communications would be made through the Foreign-office to the Minister of a friendly Power at St. Petersburg.

The lamented officer (the first, by the way, holding a British commission killed in the war) was a Devonshire man, holding relations with some leading English and Irish families. His name may be familiar to the reader as an active mover in the late Chinese war. The despatches of Lord Gough and Sir Hyde Parker bore the greatest possible test mony to his professional talent. Of late years he was under the flag of Sir Charles Hotham on the African coast. He entered the service in 1824.

CALENDAR FOR THE WEEK.

SUNDAY, June 25.—2nd Sunday after Trinity.
MONDAY, 26.—London Docks commenced, 1802.
TUES. AY, 27.—Dr. Dodd executed for fo gery, 1777.
WEDNESDAY, 28. Queen Victoria crowned, 1838.
THURSDAY, 29.—St. Peter.
FRIDAY, 30—Earl of Argyll beheaded, 1685
SATURDAY, July 1.—Battle of the Boyne, 1690. Battle of the Nile, 1798

HIGH WATER AT LONDON-BRIDGE,

FOR THE WEEK ENDING JULY 1.

Sunday.	Monday.	Tuesday	Wednesday.	Thursday.	Friday.	Saturday.
M h m / A h m	M h m / A h m	M h m / A h m	M h m / A h m	M h m / A h m	M h m / A h m	M h m / A h m

TO CORRESPONDENTS.

K. A.—The wives of the younger sons of Barons have precedence of the wives of Baronets.

DUNFERMLINE.—Lord Colborne having died without male issue, his Peerage, which was created by patent, and limited to heirs male, has become extinct. No titles, but the old Baronies by Writ, "fall into abeyance."

A NORMAN.—Robert *Courte-Heuse*, son of William the Conqueror, left, by Sibilla, his wife, one son, William Cliton, whose chequered life terminated 28th July, 1128 at the siege of Alost, where he displayed all the martial virtues of his ancestors. He died s.p.

ARIEL.—You had better apply direct to the College of Arms.

D. W.—Our Correspondent has mistaken our meaning. Charlotte Elizabeth, daughter of the Elector Palatine, and grand daughter of our King James I., was a remote ancestress of Louis Philippe, King of the French. Philip, Duke of Orleans, second son of Louis XIII., married twice. By his first wife, Henrietta, daughter of Charles I., of England, he had two daughters, from one of whom descends the Duke of Modena; and by his second, the before-mentioned grand-daughter of King James I., he was father of Philip, Duke of Orleans, whose great-great-grandson, Louis Philippe, was thus clearly a descendant of King James I.

A. B. C. must apply at the Heralds' Office.

A FREEMAN OF LONDON. The proprietors of the "Pall mall Emporium," which formed the subject of two Illustrations in No. 682, are Messrs. Harding and Company and their premises are numbered 80, 81, and 82, Pall mall, adjoining the Ordnance office.

W. H. H. CLAYTON, Burnham. All first-rate ships in her Majesty's Navy carry guns on their lower, middle, main, and upper decks; but they are called three-decked ships having but three complete tiers of guns on their broadside: the upper deck guns, no having a designation, do not count when a two or three-decker is spoken of; so the *Royal Albert* is but a three-decker.

LIEUT. H. H., Bisley Sea, is thanked for the Sketch.

*** A Large View of the Interior of the Crystal Palace is unavoidably deferred until next week.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JUNE 24, 1854.

THE defence of Silistria by the Turks is one of the most glorious episodes in the history of that people. Europe rings with acclamations at their successful gallantry, and shares with the Ottoman population the regret that the repulse of the Russians has cost the life of so brave a soldier and so incorruptible a patriot as Moussa Pacha, the late commander of the fortress. The telegraph informs us that Omer Pacha has re-established communications between Schumla and Silistria; that he has thrown reinforcements into the town; and that the Russians, foiled and beaten, have raised the siege, and retired across the Danube, leaving the Turks in possession, not alone of that stronghold, but of Turtukai and Giurgevo. It is possible that these statements may not prove in every respect accurate; but there appears no reason to doubt that the siege has been raised, that the Russians have suffered severe losses, and that Generals Paskiewitsch, Lüders, Gortschakoff, and Schilders have been seriously, the latter mortally, wounded. So many casualties among the superior officers may prove not only the martial ardour and personal courage of the Turkish garrison, but the demoralisation of the invaders. If it was necessary for the leaders to expose themselves to such dangers, the reason must have been the discouragement or cowardice of the troops. Upon no other supposition can we account for the fact that so many officers of the highest grade, and the Generalissimo himself, should have been placed in a position to do the work and run the risks of common soldiers. It has, indeed, been reported that it was not the bullets of the Turks, but of the Russian rank and file that inflicted these wounds upon the Russian commanders. This supposition, if correct, would tell even more lamentably than the former one against the Russian cause.

The first great assault upon Silistria appears to have been made upon the 29th of May, when 30,000 men attacked it, but were repulsed after an arduous struggle, that threatened at one time to end in the capture of the fortress. The assault was renewed with an equal force on the 31st, when the Russians were beaten on every point with a loss of upwards of 2000 men. On the 2nd of June the Russians, having received orders to take the fortress "at any sacrifice," sprung a mine beneath one of the Turkish batteries. It exploded in the wrong direction, and carried havoc into the besieging ranks. In the midst of the confusion, the Turks sallied out and inflicted a severe loss upon the enemy. From the 3rd to the 9th of June, the Russians suspended operations; but, on the last-mentioned day, endeavoured to storm two detached forts, but were driven back from each of them with considerable damage. On this occasion the Turks lost their gallant Commander Moussa Pacha. On the 13th, gathering courage from repeated victories, and possibly from the knowledge that their English and French allies were advancing to their help, they made another vigorous sortie, and totally routed the Russians. It was in this engagement that General Schilders received the wound which it is expected will prove fatal.

While this successful stand has been made at Silistria—and while the Turks have been so splendidly proving to the whole world that they are not an effete and decaying people, but possess a courage and spirit worthy of any nation, and of the best days in their own history—a treaty has been concluded between Austria and the Porte which cannot but have a most salutary influence upon the fortune and progress of the war. By the consent of the Sultan, the Emperor of Austria is empowered to occupy the Danubian Principalities—in the name, and on behalf, of the Ottoman Government—and to defend the integrity of the Ottoman empire. The Czar cannot do otherwise than consider this treaty as a declaration of war against him by the Austrian Government. It is impossible to look upon it in any other light; and he must either yield to the overpowering opposition against him, and withdraw from the unequal conflict, or prepare for the consequences of open hostilities with this new and powerful opponent. One of the most speedy results of this new phase of events, and the simultaneous raising of the siege of Silistria, will be the liberation of the British and French armies to undertake the capture of Sebastopol; an enterprise which, if successful—as we imagine it must be—will end the campaign with *éclat*, and demolish the influence, and cripple the power, of Russia for half a century. The Anglo-French fleets, aided by an army of occupation, in the rear, would not fail to obtain possession of Sebastopol and the Crimea. Such a result would be the annihilation of Russian power in the Black Sea, and, once achieved, would enable the Allies to decide the all-important question, whether it should ever be restored to a possessor who had no other use of it, than to impede the commerce of all free and civilised States, to make unprovoked attacks upon the territory and independence of his neighbours, and to keep the world in a continual dread of his aggressions? The people of Europe need, we think, be under no anxiety about Cronstadt. The capture of Sebastopol is the one grand achievement, upon which all energies ought to be directed. When that place shall fall, there will be an end of danger. The war will be virtually at an end;—the ambition of Russia will be punished—and the Czar will have to reckon, not simply with outraged Europe, but with his offended and humiliated subjects. It is not surprising that rumours should reach us from St. Petersburg, that his mind is giving way, under the fearful pressure of the difficulties and perils that are rising on every side to thwart and to confound him. It appears that the day of his retribution has already commenced.

THE "domestic institution" of the Southern States of the American Union has long been a source of peril. It continually threatens mischief, if not dislocation. At one time it prompts piracy upon Cuba—at another, it menaces civil war—and at all times it keeps up irritation, uneasiness, and ill-blood.

The Nebraska Bill, after months of stormy discussion, has passed the Legislature, and only waited, when the latest accounts came away, the signature of the President to become law. In a late article on this question we pointed out its divarication from the original Constitution of the Republic, and its authorisation of the base of slavery over new territories of vast extent, so as to give the slave-holding States of the Union a great preponderance over those which are inimical to slavery, and zealous for its abolition. A striking instance of the danger that the Slavery question is perpetually evoking has just occurred at Boston. The details eminently illustrate the present condition of things between the South and the North. The arrest, under the warrant of Commissioner Loring of an alleged fugitive slave, a coloured man, thirty years of age, named Anthony Burns, and in the employ of a Boston clothier, has excited greater ferment than we ever remember in connection with the question. Burns was claimed as a slave fugitive from the service and labour of his owner, a Virginian merchant in Alexandria. He had escaped, or found his way into Massachusetts, for he states that he fell asleep, from fatigue, on board a vessel at Richmond, which sailed whilst he was unconscious of the fact! After a night's imprisonment, the case against the man was legally proceeded with, and counsel argued it stoutly on either side. But when the news of his arrest transpired, a public meeting was held in Faneuil-hall, which was thronged by an immense concourse. The circumstances were warmly stated by the Abolitionist leaders. Inflamed by the speeches, the crowd rushed from the Hall to the Court-house, which they endeavoured to force, and rescue the prisoner. This was effected by means of a battering-ram and axes, wielded both by white and coloured men; the leaders continually shouting, "To the Rescue!" At half-past nine an alarm was rung, and reports of pistols and fire-arms were heard from both sides, the rioters firing some thirty shots, by one of which a man was killed in the passage, whilst trying to oppose the ingress of the assailants. The square being filled with an armed mob, the police interfered; artillery and other troops were called in, and several arrests took place. Many lingered about the Court-house all night; and next day, Saturday, May 27th, the excitement was renewed, but with diminished violence. Burns's examination proceeded; and Suttle, the owner, was arrested on a counter-charge, and, with another person, held to bail in the sum of 10,000 dollars. The Chief Justice issued a writ of replevin, to bring up the body of Burns on the 7th of June, which the Marshal repudiated. Finally, it was negotiated to purchase the slave for 1200 dollars, and a subscription was speedily raised to accomplish this object. The bargain was made, and only required some formalities to be complete, and here the matter rests for the present.

What we have recorded as shortly as possible, however, will demonstrate the precarious condition of relations so prone to lead to conflict. It is no use for the Americans to dally with the monster evil. Expediency is no excuse for slavery—for wrong breeds wrong; and an erroneous principle, like the bad act which it sanctions, is the parent of perplexity and danger. The American Union has so much energy, its resources are so flourishing, and increase so rapidly from year to year, that her statesmen are puzzled what to do with the superabundance. Let them wisely, and manumit their slaves with it!

LATEST INTELLIGENCE.

THE BALTIC FLEET.

Sir Charles Napier was to advance towards Cronstadt on the 21st, with screw ships. Admiral Plumridge was to join him on the 20th.

The *Vulture* lost a paddle-box and boat in the Gulf of Bothnia. Lieutenant Barrington, and Mon^gue, mate, were killed. Fifty-five seamen killed or missing.

STOCKHOLM, June 16.—The British took possession of Tornea on the 8th inst., unopposed. Admiral Plumridge conducted the landing personally. Tornea, it is reported, is about to be fortified, and made a station for British troops.

Tornea is a small town, having a population of about 1000 souls, situate at the mouth of the river of the same name, and is the most northerly coast town in the Gulf of Bothnia.

A letter from Lubeck, of the 11th, in *Vossi's Gazette* of Berlin, says:—

According to letters which have arrived this day from Helsingfors, it was supposed that there would soon be a naval combat, for the Russian fleet, anchored in that port, had put out to sea. It is, however, possible that its object is merely to protect the fortress of Sveaborg.

PREPARATIONS AT ST. PETERSBURG

The *National Gazette of Berlin* has the following from St. Petersburg, 11th:

For some days the troops are being withdrawn from the Narwa and concentrating themselves round St. Petersburg. It is said that Hogland is occupied by Russian troops. The rich inhabitants of the Russian capital have been lately making excursions as far as Helsingfors and Ekenaes, and even as far as Revel and Baltisch port, in order to obtain information as to the operations of the Anglo-French fleet. This curiosity has given rise to very severe observations on the part of the police. In addition to the division of the guard, there are also at St. Petersburg and neighbourhood the reserve of the light artillery, the third and fourth battalions of the reserve, and the fifth and sixth battalions of the grenadiers, of whom two regiments are in Finland. The division of the Russian Baltic fleet are at Cronstadt and one division near Sveaborg. The Gulf of Finland is full of small vessels of war. The troops stationed on the southern coast as far as Helsingfors, are ready to march at the first call.

RUSSIAN POLICY.

Letters from Vienna give some important information as to the attitude Russia is beginning to assume, in consequence of the determination of Austria to make common cause with the Western Powers in preventing the Russian army advancing into Bulgaria, or retaining possession of Moldavia and Wallachia. It would appear as if the Russian army were decidedly to retreat from the Provinces, and that the Emperor was determined in imitation of the policy of the Emperor Alexander in 1812, to concentrate all his forces exclusively for the defence of his territories. It is in consequence of this new system that Count Paul Nesselrode is said to have gone suddenly to Odessa. By this defensive policy the Czar hopes still to keep Prussia and Austria neutral, if not to attach these Powers more exclusively to his cause.

HAKEWELL *v.* INGRAM.—In the Court of Common Pleas yesterday the action against the proprietor of the *Ladies' New paper*, for libel for fleering upon the conduct of Mr. Hakewell, was heard before the Lord Chief Justice. Counsel having been heard on both sides, the jury returned a verdict for the plaintiff—damages, one farthing.

THE COURT.

The Court returned to London on Saturday, from Windsor Castle, travelling over the Great Western Railway to Paddington, and there by six of the Queen's carriages, escorted by a party of Carbineers, to Buckingham Palace. The King of Portugal and the Duke of Oporto were in the first carriage, and the Queen, Prince Albert, and the Prince of Leiningen followed in the second. The different regiments and bands of the Household Troops were stationed along the line of route. His Majesty and his Royal Highness, attended by their Gentlemen in Waiting, arrived at Buckingham Palace, from Oxford, twenty minutes past six o'clock in the afternoon. Her Majesty and the Prince Consort, with the King of Portugal and the Duke of Oporto, honoured the Royal Italian Opera with their presence.

On Sunday the Queen, Prince Albert, and the Royal family attended Divine Service in the private chapel of Buckingham Palace. The King of Portugal and the Duke of Oporto went to the chapel of the French Embassy, in King-street, Portman-square.

On Monday the Queen and Prince Albert visited her Royal Highness the Duchess of Gloucester, at Gloucester-house. The King of Portugal and the Duke of Oporto left Buckingham Palace, at half-past eleven o'clock, to honour the Lord Mayor with a visit at the Mansion-house. His Majesty and his Royal Highness afterwards visited the House of Lords, and returned to the Palace about seven o'clock. In the evening the Queen and the Prince Consort, accompanied by their illustrious visitors, honoured the Opera Comique, at the St. James's Theatre, with their presence.

On Tuesday the Queen gave a State Ball at Buckingham Palace. The guests were unusually numerous, the invitations exceeding 2000. The state-rooms were brilliantly illuminated and decorated with a large quantity of the most exquisite flowers. Flowers were also introduced as a background to the *haut pas* on which the chairs of state were placed for the Queen, the Prince, and the King of Portugal in the Throne and Ball-rooms. The *haut pas* had canopies and draperies, made to suit the furniture of the apartment. The State Dining-room, supplied all to supper, displayed the usual massive scene. In the Ball-room, and the background of a deep square alcove at the end of the apartment opposite to the entrance, about fourteen feet in width, and, reaching at about five feet from the floor and to the height of twelve feet, it was one mass of the most beautiful flowers, on gold plate. Her Royal Highness the Duchess of Kent, and their Royal Highnesses the Duchess of Cambridge and the Princess Mary, arrived at about half-past nine. The general company began to arrive soon after nine o'clock, and assembled in the Picture-gallery. At a quarter before ten o'clock, her Majesty the Queen and his Royal Highness Prince Albert were conducted from the State Drawing Room, after the Royal guests had assembled there, right through the Throne Room to the Ball-room. Her Majesty and his Royal Highness were accompanied by his Majesty the King of Portugal, his Royal Highness the Duke of Oporto, her Royal Highness the Duchess of Kent, and their Royal Highnesses the Duchess of Cambridge and the Princess Mary.

The Queen wore a dress of green tulle, over green silk, trimmed with flounces of figured green gauze ribbon, and with wreaths of shamrocks and roses intermixed with green leaves, with a corsage of the same, trimmed with green gauze ribbon, and wreaths of shamrocks and roses. Her Majesty's head-dress was composed of white and green flowers, and feathers, with the usual ornaments.

Her Royal Highness the Duchess of Kent wore a dress of white satin of British manufacture, trimmed with white tulle and white and gold bloudes, the skirt ornamented with diamonds. Her Royal Highness's head-dress was composed of white and gold bloudes and feathers, with the usual ornaments.

Her Royal Highness the Duchess of Cambridge wore a dress of white point-lace over grey silk, trimmed with silver ribbon and marabout feathers, the stomacher ornamented with pearls and brilliants. Her Royal Highness's head-dress was composed of white and grey feathers, with the usual ornaments. Her Royal Highness the Princess Mary wore a dress of white tulle, trimmed with [illegible] and wreaths of roses and leaves, with a corsage of the same, trimmed with [illegible] and wreaths of roses and leaves. Her Royal Highness's head-dress was composed of white and green flowers, with the usual ornaments. The [illegible] wore

NOTES OF THE WEEK.

THE KING OF PORTUGAL.

is about a quarter of a century ago, since Donna Maria da Gloria, i but a child, and still contesting her right to a constitutional ne, paid a visit to Eng and; and now her orphan son—older than was then, and on the eve of wedding her throne—is amongst Strange changes have taken place in public affairs, and in public ng in the interval. Constitutional notions have been cast to the ds in the Peninsula. The men who fought for Donna Maria, built up her throne with blood, have been disgraced, disgusted, driven to the appeal of arms in support of very existence; , at this very moment, the "Constitution" of Portugal is ictatorship. Under these circumstances, it was curious to hear little King of Portugal, on his visit to the City of London, other day, speaking with the greatest complacency of the "in- endence" and the "liberal institutions" of his country. "England always fought for Portugal," he observed, "whenever her inde dence has been threatened;" as if any nation could truly call itself dependent" when its very existence depended upon the arms of sign Powers, and least of all when those arms were employed to sup- ss intestine disorder. "Our liberal institutions," pursued his youthful jesty, "powerfully contribute to identify the feelings and interests of jesty with those of my people." "Both countries!" Let us e that this was uttered purely in ignorance, and not with the intention cast ridicule upon a subject of grave import, but that it may be taken an indication of a sincere desire to wipe out the past and redress wrongs.

A FREE-TRADE MOVEMENT BETWEEN ENGLAND AND AMERICA.

The United States of America have hitherto been stanch Pro- tionists. Their statesmen have been afraid of Free-trade, lest the lux of British manufactured goods should injure their rising industry, it the narrow edge of the Free-trade wedge has been driven into the otectionist block. The dispute about the right of fishing in the Bay Fundy, which at one time threatened serious consequences, has been fortunately arranged, and has been made the occasion of a treaty by ich the first great step in the establishment of Free-trade between two nations has been secured. By Lord Elgin's treaty, just come to hand, the citizens of the United States are to enjoy the same privileges, regard to fishing, as are possessed by the colonists on all the coasts the British North-American provinces; that is, they will obtain the ht of fishing within three miles of all bays, inlets, coves, &c.; they ll be allowed to erect and carry on fishing establishments on British orth-American territory. The naval force hitherto kept up by Great itain to protect the provincial fishermen is to be removed. In re- urn for these privileges there is to be complete reciprocity and Free- ade between the United States and the Canadian provinces in all rticles the product of each, with the exception of sugar and tobacco ming from the United States: these are to pay the same duties as are vied upon these articles when arriving from British colonies or other rts of the world. Though manufactured articles are not to be imitted under the terms of the treaty, yet as Western Canada daily oduces more wheat, the operation of the treaty cannot fail to be of portance to the province. An effort was made by Lord Elgin to btain American registers for vessels built at Quebec, St. John's, and e other ship-building ports of the province, but the American Govern- ent declined, and this, therefore, does not enter into the treaty. ade between the United States and the Canadian provinces in all rticles the product of each, with the exception of sugar and tobacco ming from the United States: these are to pay the same duties as are vied upon these articles when arriving from British colonies or other rts of the world. Though manufactured articles are not to be imitted under the terms of the treaty, yet as Western Canada daily oduces more wheat, the operation of the treaty cannot fail to be of portance to the province. An effort was made by Lord Elgin to btain American registers for vessels built at Quebec, St. John's, and e other ship-building ports of the province, but the American Govern- ent declined, and this, therefore, does not enter into the treaty. ut on the whole Lord Elgin deserves credit for the settlement of a ifficult question, so much to the advantage of all parties.

HAMPSTEAD HEATH.

Hampstead Herth is again sparelinge for a reason: Sir T. M. Wil- on's new application—the fifth—to Parliament may prove to build pon it in spite of the prohibition in his father's will, being virtually de eated by the adverse decision of the Judges to whom in due course it was referred. The far-famed "Spaniard's" then—the cockney Cor o— still open to the votaries of donkey racing; and the invigorating reezes and noble views on the wild heath, to all lovers of nature in her impless and healthiest aspects. But will not we congratulate the public pon the issue of their cause, so far, let us not disguise the real ate of the case, and the dangers which attend the future. There re three parties in the present dispute. On the one side stands, oine, Sir Thomas Wilson; who wants to make as much money as he can out of the life-interest in the property, by granting building leases. On the other side are, first, certain persons who already rejoice in the ossession of mansions or villas on the Heath; and, wishing to keep he place select, vehemently denounce the breaking up of the land as being n opposition to the healthy and agreeable a place of resi- ence; and, secondly, the general public, who protest against being "built out" of a place of favourite resort, which they have long considered heir own property. For Sir T. M. Wilson, who, moved by the above out- ries, wants to do "what he likes with his own," we, of course, have not a ord to say; for the exclusive Hampsteadites we have few sympathies; or the public we feel largely. But sentiment has nothing to do with the ase; lawyers have no sentiment; and, unfortunately, the present dispute comes to for putting the matter upon a sure and more rational footing han it commands at present, grievous disappointment may ensue. In imple English, the public must buy Hampstead Heath if they would con- inue to eat it their own. It is saved to their use for the present, but it will probably, during the lifetime of Sir T. M. Wilson, by the generous rovisions of the late Sir T. Wilson's will; but when Sir T. M. Wilson's next heir comes into possession, he may with his son cut off the entail, and build away without let or hindrance. The Government has found money to establish Parks for the people of the south and east, at Batter- ea and Bethnal-green, both in swamps; why not now secure this splen- id site for a People's Park in the north, accessible as it is by aid of the East and West India Dock and Birmingham Junction Railway, from the extremest limits of the metropolis? By the way, if the contem- plated measure of Municipal Reform be passed next session, it will pro- bably be within the powers of the local governing body to effect this arrangement. Why should not London have the same right to purchase parks and gardens for the recreation of her hard-working denizens as Manchester and Liverpool?

THE LOS OF THE "EUROPA."

The melancholy loss of the *Europa*, by fire, with so many brave fel- lows on board, suggests the absolute necessity of establishing some stringent regulations for guarding against such catastrophes for the future, or at least mitigating their terrible consequences when they occur. Two essential points require attention—first, the supervision of the load- ing of passenger ships, to prevent the stowing away in juxta-position of articles, which, under such circumstances, naturally generate spontaneous combustion; and secondly, the provision of sufficient boats, and their proper control and regulation, in case of disaster occurring.

In the case of the *Europa*, it appears, from the statement of Captain Gardner, that the fore-part of the *Europa*, where the fire broke out, was filled with a miscellaneous collection of tow, oil, varnish, and other inflammable matters, such as the hemp in ropes, tow, sails, &c., are chemical elements of combustion; and, whenever they are packed together in the close, warm hold of a ship, the bursting out of a conflagration is only a question of time. Surely provision should be made to extend a knowledge of such simple facts as these to those to whose charge our lives and property are daily entrusted; and even to compel attention to obvious precautionary requirements, in case of neglect on their part.

With respect to the chances of escape when the mischief happens, poor indeed it is, as it always was. Either there are no boats, or the boats have been made fixtures, and crammed with, perhaps, the most unwieldy portions of the cargo; or, if they are movable and serviceable as boats, there is no authority and experience to control and regulate their use. In the case of the *Europa*, it hap- pened that there was a pretty good supply of boats, though not nearly all there available; and there is no doubt that, if they had been made proper use of, and the crew had been under any sort of discipline, every soul in the ill-fated ship—including the brave and devoted Colonel Moore—who refused to quit the vessel as long as any of the ship under his command was on board—might have been saved. It is not enough that passenger ships should carry a sufficient number of boats for escape in case of disaster, they should be compelled to exercise their crews daily at clearing, and lowering, and manning them, so as to be ready in case of need. They should be taught also, to have confidence in their com- manders in all such extremities.

THE AIR WE BREATHE.

It appears, from the reply to a question asked in the Commons, that Mr. Locke Hankinson does not intend to let the "Smoke Bill" go to sleep, but that he has sent round printed notices to the owners of factories, and eigh. hundred and odd furnaces and chimneys, to know what faithful ons of consumed carbon may be at high or moderate limits of the metropolis, that it will come into operation on the 1st of August, and will be strictly enforced. Whilst a great public boon will be achieved, and a great public scandal removed, by this enactment, it is gratifying to be able to add that it will entail no hardship upon individuals, no vexatious interference with their rights or property. On the contrary, as is now well ascertained, all so-called smoke is waste, attributable solely to the carelessness and laziness of the men employed to stoke the fires; and the money penalties inflicted by the Act will afford, to the latter, a powerful inducement to a more attentive performance of their duties for the future, which mere considerations of economy may have failed to obtain.

MUSIC.

The two Opera-houses, Covent-Garden and Drury-Lane, have presented no novelty during the week. At the Royal Italian Opera, Grisi's farewell performances have been suspended, by her severe indisposition; but she was sufficiently recovered to be able to re-appear on Thursday, in one of her greatest parts—*Lucrezia Borgia*. This evening, it is announced that she is to perform *Valentina*, in the "Huguenots." At the Royal Opera, the "Seraglio" has been three times repeated, with undiminished—we may say, indeed, with increased—success. The beauties of Mozart's delicious music become more appreciated as it is better known; and its only fault in this opera—the length of some of the airs in the heroine's part—has been removed by several judicious curtailments made by Madame Rudersdorff. "Acis and Galatea," we understand, is in preparation; with Miss Reeves as *Acis*; Galatea," we understand, is in preparation; with Miss Reeves as *Acis*; Galatea," we understand, is in preparation; with Miss Reeves as *Acis*; Galatea," we understand, is in preparation; with Miss Reeves as *Acis*; Madame Rudersdorff (who speaks and sings in English with the ease and purity of a native) as *Galatea*; and Formès as the giant *Polyphemus*.

Donizetti's pretty comic opera, "La Fille du Regiment," in its original form, as written for the French Opéra Comique, has been produced with immense success by the French company, at the St. James's. On the first night (Wednesday) the house was full to overflowing; and the Queen, with several members of the Royal family, was among the occupants of the boxes. In the part of the heroine, the little *Vivandière*, Madame Marie Cabel was entirely in her element. She performed it as a Frenchwoman only can—with an airy, graceful coquetry—a vivacity untinged with the slightest coarseness or vulgarity, and even with that exquisite perception of toilette, which the women of no other country would strive in vain to imitate. The music, though by an Italian composer, is admirably united to the Parisian singers and the Parisian public, for whom it was written, and Madame Cabel's singing was as delicious as her acting. In short, she created an absolute furore, and would do so were the opera repeated a dozen times. The representation as a whole, was very satisfactory. The other performers, taken individually, showed no brilliant powers, but they understood their parts, worked together admirably and well, and produced that completeness of ensemble which is so general on the French stage and so rare on ours.

The principal concert of the week was that of the Philharmonic Society, on Monday evening, which terminated the series of this season. It was universally deemed the best of the series, and was, probably, one of the very best ever given by this Society during an existence approaching to half a century. Every piece, vocal as well as instrumental, was a gem of the very purest water. The Symphonies were, Mendelssohn's, in A ("the Italian Symphony"); and Beethoven's in C minor. The Overtures were the "Freischütz," and "Jessonda." The pianoforte Concerto was Beethoven's, in E flat, performed by Herr Pauer. The vocal pieces were the great scena from the "Freischütz," "Before my eyes behold him," sung by Clara Novello; the aria, "Sargeto," from Rossini's "Maometto Secondo," sung by Belletti; and the charming duet in the first scene of the "Nozze di Figaro," sung by the above great vocalists. The room was crowded to overflowing, and we have never seen an audience in a state of more animated enjoyment. Once have we ever seen a Philharmonic season terminate leaving a more agreeable impression.

Miss Arabella Goddard's Concert, at the Hanover-square Rooms, on Wednesday evening, was one of the most remarkable of the season. As a pianist this young lady is now admitted to have no superior. Her powers of execution are boundless—not exceeded by those of Thalberg himself. But, unlike Thalberg and the performers of his school, she does not use her powers for purposes of mere display, or waste them on frivolous music. Her pure and refined taste is one of her most remarkable qualities. She has devoted herself to the study of the great masters, and has employed her marvellous gifts of execution in interpreting and developing their grandest and most beautiful inspirations. At this concert, her principal piece was Beethoven's Concerto in G, the most arduous of all his compositions for the piano. She surmounted every difficulty with the quietness and self-possession of one to whom difficulty has no existence; while her intelligence and expression gave an indescribable charm to her whole performance. She also played Mendelssohn's Serenade; Studies by Mayer and Kullack; and a Notturno by Chopin (in C minor). The concert was agreeably varied by a number of vocal pieces, sung by Miss Dolby, M. Miran, a timely arrival, Herr Reichart. Reeves was in fine voice and in too often the case in consequence of sudden indisposition. The room was crowded with fashionable company; and a great number of the most eminent professional musicians were present.

Princess' Theatre.—Mr. Charles Kean will produce for his benefit, on Monday next, the great attraction of a new drama, entitled the "Courier of Lyons," to be followed by a new diverting one-act farce.

Haymarket Theatre.—On Monday next the performances at this theatre will be under the patronage of Australian Colonists, and Major the Hon. H. L. Powys, Honorary Secretary of the Central Association in Aid of the Wives and Families, Widows and Orphans, of Soldiers ordered to the East. The proceeds will be given for the support of the wives and families of soldiers and sailors engaged in the war; and Mr. Coppin, the Australasian comedian (who has won golden opinions), as well by the liberality of his charitable institutions, as by his histrionic talent), has given his services gratuitously, and will appear, on Monday evening, in two favourite characters.

Cremorne Gardens.—M. Latour, the French aëronaut, ascended in a balloon, on Tuesday, from these Gardens, in a very satisfactory manner. After a journey of some four miles, at an altitude of 2000 yards, the cords were cut, and the aëronaut descended in a parachute, at a very gradual rate, occupying nearly three-quarters of an hour, during which time no apparent oscillation took place; thereby establishing the assertion of M. Latour—that he has the power, through his system, of, to some degree, sustaining and guiding himself in the air. A very large number of persons who were in the Gardens were much gratified with the aëronaut's feats.

Gore House.—The bazaar appointed to commence on Tuesday next, under the patronage of the Queen, on the estate belonging to the Commissioners of the Exhibition of 1851, will be honoured by the attendance of the Duchess of Kent and the Duchess of Gloucester. The stalls will be presided over by the Duchess of Sutherland, the Marchioness of Hastings, Viscountess Palmerston, and other ladies of rank and distinction. It is understood the tents are to be pitched on the site of the intended new National Gallery.

Accession of Her Majesty.—Tuesday being the anniversary of her Majesty Queen Victoria's accession to the throne, the morning is ushered in with the usual indications of loyalty and respect. The royal standard was hoisted on the steeples of the churches of St. Margaret's, Westminster; St. Martin's-in-the-Fields; St. Margaret's, Westminster; St. Paul, Knightsbridge; St. Luke's, and the Royal Hospital, Chelsea. In consequence of the absence of the troops engaged in the present war no review took place, the depôts of the various regiments simply going through the ordinary inspection. At one o'clock a grand *feu de joie* was fired from the mortars in St. James's park, and simultaneously the guns of the Tower the Royal Arsenal at Woolwich, Tilbury Fort, Sheerness, and other places were fired. The various steamers and vessels as usual exhibited the colours of all nations except those of Russia.

Election of Sir George Grey.—On Saturday last, Sir George Grey, whose acceptance of the Secretaryship of the Colonies, had created a vacancy in the representation of the borough of Morpeth, was re-elected without opposition.

On Monday the Lords of the Admiralty gave notice that transports were required to convey several hundred troops to Varna, on the Black Sea, for the cavalry horses; also to convey large quantities of provisions from the River Thames, 500 tons from Gosport, and 1000 from Plymouth to Malta; and 300 tons of naval stores from Deptford to the Mediterranean.

Trubey-House School, Woodford, Essex.—On the 14th inst. the annual examination of the pupils of the above school took place, before a numerous attendance of the parents and friends of the establishment. The Trubeyan silver medals and other prizes were the (Continued on page 594.)

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

The new President of the Royal Society will be, it is said, Lord Wrottesley; but the election, we believe, will not take place till St. Andrew's Day, the 30th of November next.

The Earl of Ellesmere, as President of the Geographical Society, has been giving two *conversaziones* to the members of the Society, and to people who are supposed to know as much of distant places as the members of the Travellers' Club. They have been well attended; and, though the conversation did not dwell so much on recent geographical discoveries as some were led to suppose, but turned to other familiar subjects—the fine pictures to be seen at every fresh glance—and to those common topics—

Who gave the ball or paid the visit last;

yet all seemed to agree that the meetings were of the most pleasant description. Lord de Grey and Lord Ellesmere have fine rooms for such assemblies; and any noblemen who have fine reception-rooms should, so some indifferent fellows contend, be elected presidents of learned societies. We should be sorry indeed to lose Lord Rosse or Lord Malmesbury, for noblemen better housed, but certainly less fitted (or the duties which these two distinguished noblemen discharge with so much advantage to science and antiquity.

Old books of real importance are getting up in price. A copy of the first edition of Milton's "Comus"—a very thin quarto, of the year 1637, printed for Humphrey Robinson—sold, at Sotheby and Wilkinson's, on Wednesday last, for £26. Contrast this price with the prices quoted in Lowndes! At Rhodes's sale, a copy sold for £1 3s.; Steevens's copy sold for the same sum; at Jadis's, there was an advance of five shillings, and at Hollis's, £2 10s. was considered an outrageous high price. The copy sold on Wednesday was certainly a very fine copy, but it had no extravagations of binding—it was an auctioneer's discovery, at the end of a fine copy of Simmons's edition of "Paradise Lost," the quarto, of 1668. At a country sale, the two would have sold as one—and at a "Paradise Lost" price.

We were present at the sale of Mr. Seth Stephenson's ivory carvings, to which we called attention in our column of last week. Many besides ourselves were present; collectors, keepers, dealers—

Jews from St. Mary Axe for gain so wary,
Who, for old clothes, would even axe St. Mary.

There was an eager competition. It was entered at ten guineas, and went quickly on, but by slow figures, to fifty guineas. Here it stopped for a time; and here, if we are not mistaken, it was dropped by the British Museum. Mr. Chaffers vied with Mr. Bohn; and it was, in a breathless suspense, finally knocked down to Mr. Walesby for £7. Mr. Stephenson, we have heard, gave £5 for it. Some men do meet with bargains. Nor are we disinclined to consider this casket, at its auction price, in any other light than a cheap acquisition. Here is a casket in which Alexander might have placed a Froissart or an Ivanhoe.

The English pictures at Christie's, to which we last week devoted attention, sold at Manchester and Liverpool, or rather at Agnew and Grundy prices. The "Spare Wife" of Philip brought 340 guineas; a "Hayfield," by Linnell, a picture of the year 1854, sold for 455 guineas; Callcott's "Hampstead Heath" brought 338 guineas; and Goodall's "Raising the Maypole" was knocked down at 805 guineas. What would Hayden have said to such fancy prices?

They are about to raise the Horse Guards—not the standard of the men enlisted, but the building at Whitehall, which bears their name. The architect will be either Sir Charles Barry or Mr. Pennethorne. The Horse Guards was built by Kent, after a design furnished, it is said, by Kent. That was a century ago, and its first scaffolding was about it. We are not sorry for the change, though we shall miss a London feature intimately connected with "Butcher Billy," the bluff, bold, Marquis of Granby, the kind-hearted Duke of York, and the great Duke of Wellington. As the Duke himself said, "Her Majesty's Government must be carried on;" and the present building is insufficient for the requirements of the public service. If they remove the clock, how many old gentlemen's watches will go wrong?

This change in the Horse Guards, reminds us of a piece of architectectural detail upon which we have long wished to say a few words. No one who contrasts the sculpture at Somerset House—in the part by Sir William Chambers—with the sculpture of the new building erected by Mr. Pennethorne, or the sculpture in the new front of Buckingham Palace, but sees at once how infinitely superior the old work is to the new. How is this? Mr. Pennethorne has been alive to the beauty of the old carvings, for he has had careful moulds made from every bit of stone, or bas-relief he was desirous to introduce. Perhaps he does not pay enough. Yet this, we think, is hardly the secret. Let us but remember by whom the carvings in the old building were made—by Bacon, Banks, Wilton, Nollekens, Carlini, and Flaxman. The new sculptures are probably by nameless men destined to remain nameless. Of the prices paid by Chambers, we have some curious unpublished particulars, to which we shall hereafter direct attention.

We are to have a sale, on the last two days of June, of the duplicate and imperfect books of the magnificent library of Early English Poetry, formed by the late Mr. Miller, of Craigentinny, and of Britwell, in Buckinghamshire. The collection contains some very choice articles; and all who are curious to possess treasures not of everyday occurrence, should look to this sale. Mr. Miller was so choice in the size of his copies, that he applied a foot rule—which he carried, like a carpenter, in his pocket—to every volume, before he ventured on a single bidding. We, we, consequently, known at auctions as *Measure* Miller.

The nine days' sale of Mr. Caff's coins brought £3760 1s. There is to be another nine days, commencing on Monday next, so that we may estimate Mr. Caff's cabinet at something like £6000. It was essential for a cabinet of English coins. The largest sum obtained for any one coin was £140, for the very rare and very celebrated crown-piece of Henry VIII. The King is seen in full face, and crowned, with the sword in his right hand, and the orb in his left. The next largest sum was £80 for a gold coin (or royal) of Queen Mary I. The Queen is represented standing in a ship, crowned, with a sword in her right hand, and her left resting on a shield, bearing the Royal arms. On the side of the ship is the letter T, for a pattern piece in gold of Edward VI. From its weight, it is supposed to have been designed for a three-sovereign piece. Three coins of Kings of Mercia brought £62, £51, and £48. A gold royal of Queen Elizabeth sold for £30 10s., and a spur royal of James I. brought £25 10s.

Royal Visit to the City.—Between eleven and twelve o'clock on Tuesday, his Royal Highness Prince Albert, the King of Portugal, and suite, arrived in two Royal carriages at the Mansion House, where they partook of refreshment with the Right Hon. the Lord Mayor and other civic dignitaries; after which the distinguished party proceeded to the Royal Exchange, Bank, East India House, and other public buildings. A great crowd had assembled in the City, but there was sufficient force of police present to prevent the least interruption to business.

A Monster Excursion.—Notwithstanding the war,—or perhaps, rather in consequence of it—the Parisians have schemes about monster excursions" on a greater scale than has ever been yet attempted. One attractive programme for the lovers of long voyages is that of one promising "Thirty days in the East for £40." For the trifling sum a man may visit all the ports of the Mediterranean, spend three days at Naples, "perhaps" a week at Corfu, see the Pirmus, Athens, the Archipelago, and Constantinople, then return to France by Civita Vecchia, and spend a long day at Rome.

INSPECTION OF TROOPS AT GIBRALTAR, ON HER MAJESTY'S BIRTHDAY.

CELEBRATION OF THE QUEEN'S BIRTHDAY AT GIBRALTAR.

HER Majesty's Birthday was kept on the 24th of May, with great spirit. Precisely at twelve o'clock the first gun of a Royal salute was fired from the Rock Gun—a height of nearly 1500 feet. The galleries then gave forth their jets of flame and smoke; and a most extraordinary sight it was to see these spouting from an almost invisible aperture in a wall of rock.

MILITARY OBELISK AT SCUTARI, ON HER MAJESTY'S BIRTHDAY.

The regiments on the plain in succession—the 13th, 39th, 92nd (Highlanders), 89th, and 17th—fired a *feu de joie*. Three cheers were then given, which made old "Calpe" ring again. The troops were commanded by Colonel Gordon, Royal Artillery. The day's evolutions concluded by marching past in slow time before his Excellency Sir Robert Gardiner, who, with a large staff, was on the ground—the gallant and honoured commander of the fortress of the world. Crowds of people came in from Spain in their national costume, giving a gay variety to the scene.

In our Journal of last week, we detailed the inspection of British troops, at Scutari, on her Majesty's Birthday. We now engrave, from a Sketch by a Correspondent, the festal obelisk which was erected on the occasion, in the centre of the Guards' camp. This tasteful design consisted of a square base, inscribed "God Save the Queen," and paneled and festooned with garlands; upon the sides were piled the drums and colours of the regiment, and above rose the obelisk, inscribed "V.," in wreaths, and surmounted with a floral crown. The loyal device was altogether very prettily executed.

TETSCHEN.

TETSCHEN or Teschen, in Bohemia, on the frontier of Saxony, the scene of the recent conference between the Emperor of Austria and the King of Prussia, had hitherto a diplomatic celebrity; for here was concluded, in 1779, the treaty between Frederick II. of Prussia and the Empress Maria Theresa, which terminated what is called the War of the Bavarian Succession.

Tetschen is the capital of the circle and the duchy of that name, and is situated at the foot of a gentle eminence, an offset of the Carpathians, on a tongue of land, formed by the river Elsa or Olsa, and a small stream called the Bober or Bobrcek. The town was mostly rebuilt after a great fire in 1739, previous to which it resembled a dirty Polish town. It is the seat of all the courts of justice and public offices of the circle and of the duchy.

The accompanying View of Tetschen is from the sketch-book of a Correspondent.

Tetschen is altogether a flourishing town, with railway communication, and enjoys one of the most romantic situations which the banks of the Elbe can afford. It lies at the foot of the tall rock, on which stands the Castle of Tetschen, the seat of Count Thun, to whom the village and adjoining domain belong. The rock on which the castle stands was strongly fortified during the Thirty Years and the Seven Years wars, and was again placed in a state of defence by Napoleon, in 1813. The present castle was finished in 1775. On the opposite bank of the river are the baths.

Below Tetschen, "the Elbe is pent up between bold cliffs and huge natural battlements of rock, clothed in rich foliage wherever it is possible for a tree to hang, and broken by smooth plots of verdure leading away into romantic dells. It has all the variety of our own Wye, on almost the scale of the majestic Rhine."—*Reeve.*

Reverting to the result of the recent Conference (detailed in our Journal of last week), the *Prussian Correspondence*, of Berlin, which is considered a semi-official journal, has the following, under date of the 13th:—

The assertions of the press relative to the late interview of the King of Prussia and the Emperor of Austria, prove that public opinion has justly appreciated the great significancy of that event. The invitation addressed to the King of Prussia by his august nephew to meet him at Tetschen, has not only furnished to the King an opportunity of renewing verbally his congratulations to the young Imperial couple, but has also

TETSCHEN, IN BOHEMIA, THE SCENE OF THE LATE CONFERENCE BETWEEN THE EMPEROR OF AUSTRIA AND THE KING OF PRUSSIA

OPENING OF THE IMPERIAL PETROPOLIS RAILWAY, BRAZIL.—BENEDICTION OF THE LOCOMOTIVES.

permitted the Sovereigns, as well as their advisers, to discuss confidentially the questions relative to the present European crisis. We may, for our part, confirm with entire certainty the news that the result of that interview has been most satisfactory in every respect. Not only have the relations of sympathy and confidence which before united the two Princes been again strengthened by the frank and immediate communication of their personal views, but the political deliberations have ended in a perfect understanding as to the bearing of the treaty concluded by the two Great Powers, in relation to their common action. We do not think we are mistaken in summing up the political result of the conference of Teschen in this way: that it has given fresh strength to the treaty of the 20th of April, and prevented any future misunderstanding. Whatever may be the turn that events may take, we have now a fresh guarantee that Prussia and Austria consider their interests as closely connected, as well as regards the other members of the Germanic Confederation, as the foreign Powers, and that they are decided on acting in common to bring about a prompt and satisfactory solution of the Eastern question. We learn that the two allied Sovereigns have expressed their entire satisfaction at the result of the deliberations of Teschen, and that it is in this sense that the communications which have been addressed by the two Cabinets to their diplomatic agents, have been drawn up.

OPENING OF THE IMPERIAL PETROPOLIS RAILWAY.

On the 29th of August, 1852, the Emperor of Brazil cut the first turf of the first railway in his dominions; this interesting event was illustrated in our Journal of Nov 6 following, and we have now to record the completion of the work then begun. This, however, is but a portion of the contemplated scheme, and extends from the port of Maná, at the head of the bay of Rio de Janeiro, to the base of the mountain range which runs parallel with the coast line: the continuation of the line to the river Parnahyba, and ultimately to the navigable river San Francisco, is the great undertaking on which the hopes of the country are fixed.

The inaugural section of this first section of the great future railway took place on the 30th of April, and was marked by all the ceremonials which its importance deserved

The progressive character of the Brazilians, and their appreciation of all material improvements, were strongly evinced on this occasion: and, now that they have tested for themselves the benefits of railway locomotion, they build with fervour the means which promise the opening up of those boundless and fertile tracts of their country which have remained up to this time absolutely profitless.

At an early hour steam-boats and felucks, freighted with curious and eager passengers, left the city of Rio, anxious to reach Maná before the arrival of the Emperor and Court.

At the appointed time the Royal steamer approached the pier; rockets announced the landing of their Imperial Majesties, banners of every nation waved in the breeze, and the loud welcome of human voices was mingled with military music. Two long lines of the principal personages of the realm were formed on the pier, eager to show their homage by kissing the hands of their Majesties as they passed

Their Imperial Majesties were received by the Authorities of the Railway, and conducted to the rooms prepared for their reception. One of the iron station houses had been fitted with galleries for the accommodation of spectators, and spaces in the centre were appropriated to the thrones of the Emperor and Empress, the chapel and altar of the Bishop, and the seats of the Ministers and Diplomatic Corps.

When the illustrious visitors had taken their seats, the ceremony of the benediction of the locomotives was performed by the Bishop and his Clergy, accompanied by solemn and appropriate chants.

The locomotives, which had been in waiting in the station, were then dispatched; one as a pilot, in charge of Mr. E. B. Webb, the resident

SHIPPING THE MEDITERRANEAN ELECTRIC TELEGRAPH CABLE, AT MORDEN WHARF, EAST GREENWICH.—(SEE NEXT PAGE)

engineer; and another, driven by Mr. William Bragge, the Engineer-in-Chief, brought up a train of carriages, one of which had been sumptuously fitted for the use of the Imperial Family and the Ministerial circle.

The Emperor and Empress were conducted to their seats by Senor Irenco Evangelista de Sonza, the originator and president of the Railway Company; and, the rest of the carriages being filled by the invited guests, the train departed, amidst the deafening "Vivas" of the astonished and enthusiastic crowd. A third engine followed, in charge of Mr. Charles Rolfe, who has constructed the electric telegraph on the Railway. Piquets of National Guards were stationed at regular intervals along the line, and every elevated position was crowded with spectators.

On the arrival of the train at Frazozo, it was welcomed by a discharge of rockets, and their Majesties and suite alighted and partook of slight refreshment; shortly afterwards returning in the same manner to Mauá, and travelling for some distance at the rate of thirty-five miles per hour.

The Emperor and Empress, having alighted from their carriage, expressed themselves in terms of great delight at the pleasure received from their novel journey.

The originator of the Railway then addressed his Majesty, and eloquently illustrated the great benefits which railway communication would ensure to the empire, adding:—

This Railway, Senhor, should not be allowed to remain within its present limits; and, if I may be allowed an encouragement from your Majesty, it will, assuredly, not cease to advance until its most spacious station be erected on the left bank of the Rio das Velhas. There will be accumulated, for conveyance to the great market of Rio, that enormous mass of produce which will be contributed to the public prosperity by the country, watered by that immense fluvial artery the Rio San Francisco. It will be then, Senhor, that the majesty of bay whose waters wash the shores of the capital of the empire, will have its spacious and sheltered anchorage crowded with ships innumerable. Then, Senhor, will Rio de Janeiro be a centre of commerce, industry, wealth, civilisation, and strength, having nothing to envy in any spot in the world.

His Majesty graciously answered—

The Directors of the Imperial Petropolis Railway and Steam Navigation Company may feel assured that no less than theirs is my pleasure in taking a part in the commencement of an enterprise which will so greatly encourage the commerce, arts, and industry of this empire.

The Emperor then conferred upon Senor Irenco the title of Baron of Mauá, in acknowledgment of the important services he had rendered to his native country.

Accompanied by the Baron of Mauá, and the Chief Engineer, Mr. Bragge, his Majesty then inspected the works on the line, and examined with much minuteness the construction of the locomotives

A division of the Station had been decorated and laid out for the banquet, of which the Emperor and suite, and the elite of the company, partook; whilst other trains were dispatched for the gratification of the spectators.

When we reflect that the works on this Railway were executed in the short space of twenty months, under the burning rays of a tropical sun, with labourers accustomed only to the most primitive modes of operation, and at a great distance from England, we cannot withhold our praise from those engaged in this enterprise. We sincerely congratulate the Brazilians upon the noble spirit they have displayed in the commencement of their great national undertaking.

Mr. Bragge has been honoured by the Emperor conferring upon him the title and decoration of Cavalier of the Order of the Rose.

THE BRITISH ELECTRIC TELEGRAPH.

VERY few years since it would have been deemed almost an act of insanity, to have even contemplated a submarine telegraphic communication between England and the continent of Europe. The fact, however, great and important as it is, has been accomplished, and with astonishing success. In the month of September, 1851, the first Submarine Telegraph that between Dover and Calais, now hourly in use—was completed. We have since seen a telegraphic communication under the sea established between Orfordness and Ostend, between Orfordness and the Hague, between Portpatrick and Donaghadee; besides numerous short lines, such as from the Isle of Wight to Portsmouth, and across the Frith of Forth, &c. But by far the largest and most important of the Submarine Telegraphs in progress, is that of which we present an Illustration to-day. This great undertaking is intended to unite Europe with Africa (with, probably, a branch to Malta), and will, no doubt, ultimately extend to our Indian Empire, where, as a number of our readers are aware, a very extensive system of telegraph is in course of construction, under the superintendence of Dr. O'Shaughnessy. The Mediterranean Electric Telegraph cable will be in three portions: the first (about 90 miles) will be laid between the Gulf of Spezzia and Cape Corse—the most eastern point of the island of Corsica—where the submarine communication will be joined to the overland system of telegraph now being constructed throughout that island; the second portion of the cable (about ten or eleven miles) stretches across the Strait of Bonifacio, joining the Sardinian overland line near Cape Falconi; the third and longest portion will be laid from Cape Cagliari to the African coast, where it will join the French Algerian system, which was opened on the 16th January. This distance will require no less than 160 miles of submarine telegraph; and, when we consider that the whole will be in one continuous length —that its weight will exceed 1200 tons, and that it will have to be sunk in water which is, in many places, at least 600 fathoms in depth, we may well be amazed at the gigantic strides of science and enterprise in the present age. The first portion of the cable (about 110 miles) is, as we write, complete; and nearly all shipped on board the *Persian* steamer.

The contractors for the entire 250 miles of submarine, as well as the land lines, are Messrs Tupper and Carr, of Mansion-house-place, and Birmingham. The cable is being manufactured at the Wire Ropeworks of Messrs. W. Keeper and Co., Morden Wharf, East Greenwich. The insulated gutta percha wires are supplied by the Gutta Percha Company, of which Mr. Statham is the able and indefatigable director. The details of manufacture are as follows:—Round a hempen core well saturated with tar, pitch, oil, and tallow, in certain proportions, are laid or twisted, by a beautiful machine, six insulated copper wires, which, in fact, constitute the "telegraph." A worming of hemp is at the same time laid (also by machinery) between the interstices of the gutta percha, and over this again a layer of hemp of the best quality, prepared like the core, is wound, forming a total covering of considerable speed. The object of covering the gutta percha wires thus carefully and securely is to ensure their not being injured by the second and finishing process. The telegraph having been prepared as above, is covered with twelve iron wires laid by machinery into a concentric spiral form. The wires are of No. 1 Birmingham gauge, or about 5-16 of an inch in diameter, and so beautifully are they all brought together, that a section of the telegraph, when covered with the outer protection of wires, shows almost mathematical accuracy in all its details. The weight of the cable is about eight tons to the mile, and it is reckoned by the contractors that, working at present speed, the whole 250 miles, weighing about 2000 tons, will be completed and ready to lay down in the month of August. To show the speed with which things are done now-a-days, we may mention that on the 16th January last the grass was growing, where, since then, owing to the personal exertions of Mr. Glass, the managing partner of Messrs. Keeper and Co., a substantial brick factory has been erected; a tank, 75 feet in diameter, built, and in that tank has been coiled, and is now being shipped, 110 miles of telegraph cable, and fifty miles towards the second. The contract is with the Mediterranean Telegraph Company, of which Mr. John W. Brett, the eminent telegraph engineer, is the pioneer, indeed, of submarine communication—is the gérant and concessionaire from the French and Sardinian Governments.

To inaugurate the completion of the first portion was the object of the assemblage on Wednesday week, which was graced by the presence of the leading men of science in London at the rest mentioned, the Prussian Ambassador, Lord Westcote, Lord Radstock, Mr. Brown, Mr. Laing, M.P., Professors Faraday, Wheatstone, Miller, Grove, the Foreign Commissioners of the Exhibition, and a numerous party. After inspecting the works, machinery, &c., and firing guns through the cable, passing messages, and other interesting experiments, the party adjourned to the Crown and Sceptre, where an elegant déjeuner wound up the day to the satisfaction and gratification of all the visitors.

On Wednesday last the screw-steamer *Persian* sailed from Greenwich with the electric cables, for uniting Piedmont and Corsica, and Corsica and Sardinia; and the new screw-steamer *Athenian*, of 1350 tons, is engaged to take out the remaining great cable for uniting Sardinia and Africa. The cost of the shipping the cables has become a serious item in consequence of the War in the East—the *Athenian* being engaged at a sum exceeding £1000 per week, for the hire of the vessel alone; and the expenses of the *Persian*, and labour only, in shipping the present cable, have, in about a fortnight, exceeded £2000.

CHESS.

TO CORRESPONDENTS.

CHESSMUS. Problem No. 536 is perfectly correct. Your last shall be examined. Contributors of Games, Problems, &c., should always send their names and addresses.

AMATEUR.—The *Chess-player's Chronicle* is published on the 1st of every month by Kent and Co., 58, Paternoster-row.

SOLUTIONS OF PROBLEM No. 537, by Chirurgus, J. M. of Sherburn, are correct.

SOLUTIONS OF PROBLEM No. 538, by Gregory, M. P., Sandro, P. T. W., Argus, Box and Cox, J. E. R., Stuttgardt, Chirurgus, are correct.

SOLUTIONS OF PROBLEM No. 539, by Hopso, R. W. B., El sennes, J. P., Box and Cox, M. P., Phil p, True Blue, Chirurgus, T. T., of Oxford, J. G. B., Jack of Shrewsbury, are correct.

SOLUTIONS OF ENIGMAS, by J. P., M. P., Dux, C. C., Ernest, Philip, S. S. T., Omega, D. D., True Blue, Jack of Shrewsbury, are correct. All others are wrong

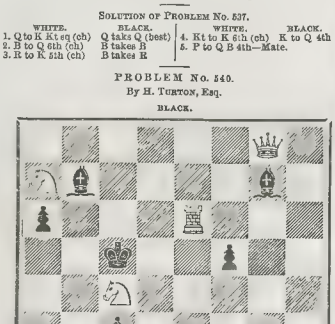
SOLUTION OF PROBLEM No. 537.

WHITE.	BLACK.	WHITE.	BLACK.
1. Q to K 8th (ch)	Q takes Q (best)	4. Kt to K 6th (ch)	K to Q 4th
2. B to Q 6th (ch)	B takes B	5. P to Q B 4th—Mate.	
3. R to K 5th (ch)	B takes R		

PROBLEM No. 540.

By H. TURTON, Esq.

BLACK.



WHITE.

White to play first, and mate in three moves.

CHESS IN FRANCE.

Fine Game between Messrs. SZEN and BUDZINSKI.

(*King's Bishop's Gambit*)

WHITE (Mr. S.)	BLACK (Mr. B.)	WHITE (Mr. S.)	BLACK (Mr. B.)
1. P. to K 4th	P to K 4th	29. Q R P tks R (ch)	P takes P
2. P to K B 4th	P takes P	30. Q R to Q B sq (ch)	K to Q 2nd
3. B to Q B 4th	P to K B 4th	31. P takes P	Kt to Q 4th
4. Kt to B sq	P to K Kt 4th	32. R to Q 2nd	B to Q 8th
5. Kt to Q B 3rd	P to Q 3rd	33. K R to K B sq	R to K sq (ch)
6. P to Q 4th	B to K Kt 2nd	34. K to Q 3rd	B to K B 3rd

10. K Kt to K sq	P takes P	38. K to Q Kt 3rd	R to K Kt sq
11. Q Kt to Q 6th	K to Q sq	39. Q R to Q B 2th (d)	B takes R
12. P takes P	Q B to Q 2nd		
13. P to K 6th (e)	P takes P	40. P takes B (e)	R to K Kt 5th
14. Q Kt tks K B P	Q to K B 4th	41. P to Q R 5th	K to Q B sq
15. B takes K P	Q to Q Kt 4th (ch)	42. P to Q B 6th	K to Q Kt sq
16. P to Q B 4th	Q to K 4th	43. R to Q 3rd	K to Q Kt 3rd
17. Q takes K Kt P	R to Q B sq	44. B takes Kt	P takes B
18. K takes B (ch)	Q takes B	45. R to Q 6th (f)	R tks K Kt P (ch)
19. K Kt to K B 3rd	P to K R 4th (b)	46. K to Q B 2nd	K to Q B 2nd
20. Q tks Kt (ch) (c)	K takes Q	47. R takes K P	R to K Kt 8th
21. Kt takes K R	R to K B sq (ch)	48. K to Q 3rd	R to Q Kt 8th
22. P to K 7th	R takes Kt	49. K to Q B 3rd	R to Q Kt 8th
23. Kt takes K B P	R to K B 3rd	50. K to K 5th	K to K B 3rd
24. K to K 2nd	R takes Kt	51. P to R 5th	K to K 3rd
25. B to K 3rd	Kt to K B 3rd	52. K to Q B 2nd	R to Q Kt 8th
26. Q R to Q sq (ch)	K to Q B 3rd	53. K to Q B 3rd	R to Q Kt 6th
27. P to Q Kt 5th	P to Q R 3rd	54. R to Q B 5th (g)	P takes R
28. P to Q R 4th	P to Q Kt 4th	55. P to Q B 7th	Black surrendered.

(a) White plays all this attack extremely well.

(b) He has an better move to play. If he play the Queen to K B 3rd, or K 2nd, to guard his Bishop, the Q Kt attacks her with terrible effect.

(c) A good move, but we believe that Q to K 3rd would have been still better.

(d) Well played

(e) No man knows the value of two such Pawns as these, or the way to play them to most advantage, better than Mr. Szen.

(f) If *sacrifice* as this move looks at first sight, it will be found to be the most expeditious mode of terminating the struggle.

(g) White's concluding moves are very clever, and remind one of some of Mr. Szen's play in his palmiest time.

CONSULTATION GAME.

Mr. LÖWENTHAL plays against the Rev. T. GORDON (Gamma) and Mr. BRIEN.

(*Allgaier Gambit*).

WHITE (Mr. L.)	BLACK (Allies.)	WHITE (Mr. L.)	BLACK (Allies.)
1. P to K 4th	P to K 4th	24. P to Q 6th	R to K B sq
2. P to K B 4th	P takes P	25. R takes P	Kt to Q B 7th (g)
3. Kt to K B 3rd	P to K Kt 4th	26. R takes B	Kt to K 6th
4. P to K R 4th	P to K Kt 5th	27. R to K 2nd	P to K Kt 4th
5. Kt to K 4th	P to K R 4th	28. R to Q sq	R to K 7th
6. B to Q B 4th	K R to Kt 2nd	29. R to K sq	R takes K Kt P
7. P to Q 4th	P to Q 3rd		(ch)
8. Kt takes K B P	R takes Kt	30. K to R sq	R to K R 7th (ch)
9. B takes P (ch)	K takes B	31. K to Kt sq	Kt to K 6th
10. B takes P	Kt to Q B 3rd (a)	32. R to K 2nd	Kt to K B 7th
11. Q to her 2nd	P to Q 4th	33. P to Q 7th	P to K R 6th
12. Castles	P to his Kt 3rd	34. Kt to Q sq (h)	R to K R 8th (ch)
13. B to K Kt 5th	B to K 2nd	35. K to K 2nd	R takes Kt
14. Q to R B 4th	B takes B	36. P to K 8th	P to K R 6th (ch)
15. Q to K B 7th (ch)	K to K R 3rd	37. K takes Kt P	R to K Kt 8th
16. P takes B (ch)	Q takes P		(ch)
17. Kt to Q B 3rd. (b)	Q to K Kt 2nd	38. K to B 4th (i)	P to K R 7th
18. Q takes Q P	Kt to Q Kt 5th	39. P to Q 7th	P to K R 8th
	(c)		(becom. a Q)
19. Q to her 4th (d)	Kt takes Q B P	40. P to Q 8th (be-	R to K Kt 6th
20. R to K B 5th	Kt takes Q R	coming a Q)	(ch)
21. R takes Kt (e)	B to K 3rd (f)	41. K to B 5th	Q to K B 8th (ch)
22. R takes Q	R takes Q	42. K to his 6th	R to K Kt 3rd
23. R to K 7th	B to Q B 5th	43. K to Q 7th	(ch)
	And the Allies give mate in three moves.		

(a) Some of the moves in this defence display a want of book knowledge.

(b) The full effects of this move were evidently not seen by the Allies. Mr. Löwenthal has now an excellent game, and his opponents are proportionately hampered.

(c) A desperate manœuvre, adopted, amongst other reasons, with the view of tempting White to save his Queen's Pawn.

(d) It was subsequently suggested by the Allies that, had Mr. Löwenthal's Queen retreated to her Kt third, the game would have been won by White, if they had ventured to take the Queen's Pawn, for instance,

19. Q to her Kt third	Q takes P (ch)
20. K to Kt sq	

And however the Black bring out their pieces, or prevent the hostile Queen's Rook from [illegible]

[illegible] the Q to Q Kt 3rd, &c.

[illegible] of the Queen's Pawn by the Black, when they moved their Knight to his 5th.

(f) The move as now given results in a very fine and interesting end game.

(g) Nothing would be gained by the advance of the Queen's Pawn, e. g.

24. P to Q 7th	P to K R 6th
25. R takes Kt (best)	R takes R

(h) Had he taken the Knight, the following train of play might have arisen—

26. K takes R	P to K R 7th
27. P to Q 7th	P to K R 8th (becoming a Queen)
28. P to Q 8th (becoming a Queen)	R to K R 7th (ch)

* 41. K to Q 3rd R to K R 6th (ch) 42. K to Q 2nd Q takes P (ch)

And wins

(i) And Black gives Mate in five moves.

41. K to his 3rd (best)	Q takes P (ch)
42. K to Q 2nd (or 4)	Q takes P (ch)
43. K to his 3rd	Q to her B 8th (ch)
	Winning easily.

If, at the 42nd move in the above variations, White moves his K to B 2nd, he is mated on the move; and if to B 3rd, mate comes in three moves.

EPITOME OF NEWS—FOREIGN AND DOMESTIC

The meeting of the British Association for the Advancement of Science is fixed for Wednesday, Sept. 20, at Liverpool, under the presidency of Lord Harrowby.

Last year the importation of tallow amounted to 1,175,754 cwt.; of which 515 901 came from Russia.

In five very short streets in Greenock, containing 336 shops of all kinds, 95 are occupied by publicans.

According to the American journals, the emigration of slaveholders to Nebraska was very extensive.

Of the total amount subscribed for the establishment of the public park in Macclesfield, the working-classes have contributed in pence one-fourth as much as the Corporation and Government together.

A magnificent album was presented to the Prince and Princess of Prussia on the anniversary of their marriage, by the Rhenish towns. It contains eighty water-colour drawings by the first German artists, and is estimated in value at 15,000 thalers (nearly £2000).

The scarcity of fruit is universally complained of this season, as the late and severe frosts have had the effect of almost annihilating all kinds of it. It is only where the greatest care has been taken that a stock of fruit has been preserved.

A letter from Hong-Kong announces that the Russian Admiral Fanunline, who had been charged with a secret mission to Japan, has been wrecked in his vessel on the coast of Sakalf.

Mrs. Thomas, formerly of Lyndhurst, Hants, is digging for coal about five miles from Geelong; she has dug 300 feet deep, and expended £3000. She has come across several seams of coal, but not thick enough to pay for working. She has been offered £23,000 for her coal-pit, which she has refused, as she is in expectation of coming across a seam that will realise a handsome fortune

The Chief Justice (Monaghan) of the Common Pleas has been appointed a member of the Senate of the Queen's University, in place of the Master of the Rolls, resigned.

MM. Jerome Bonaparte, father and son, have arrived at Havre from America. They are the son and grandson of Prince Jerome Bonaparte by his marriage with Miss Paterson, which marriage, it will be remembered, was annulled by the Emperor Napoleon.

There is a scheme getting up, "A week in the Baltic for £8." A project for a monster pleasure train through Germany has been frustrated by the indisposition of the German railway directors to lower their fares.

Several of the oldest drivers on the Manchester, Sheffield, and Lincolnshire Railway are leaving their situations, and going to India. The inducement is the high rate of wages offered.

Letters from Texas state the Indians continue to massacre brave lers without mercy. A company of eight Mexican rope dancers and six Indian harp players, travelling from St. Antonio to Laredo, lately fell victims to a party of those savages.

The imports of flax of the different foreign States into the United Kingdom, during 1853, amount to 94,163 tons, 16 cwt., and at the exorbitant price of £110 per ton—to which the average price of foreign flax has already risen—shows a sum of £10 358,007, which has been paid in cash for foreign flax fibre last year.

Alexandre Dumas' luxurious fancy villa at St. Germains, almost as well known as his favourite work, after which it was named, "Monte Christo," has been sold for 31,000 francs. It cost him 400,000.

A great quantity of grass has already been cut in various parts of Devonshire and other western counties; and the harvest, on the whole, is likely to be good.

M. Kossuth has accepted an invitation to attend a public meeting to be held at the Royal Amphitheatre, Liverpool, in about three weeks.

The King of the Two Sicilies has given his consent to the formation of a Joint-stock company, for the erection of a Crystal Palace at Naples. It is intended for a winter garden.

The remarkable state of tranquillity which at present prevails in Tipperary may be gleaned from the fact that there are only three persons in Clonmel gaol for trial at the approaching assizes.

A memorial is in course of signature in Hull, praying that, to prevent the enrichment of foreign neutral shipping, by permitting it to carry on trade between this country and Russia, "Every outlet for Russian commerce be immediately closed, and the supply of money to that country prevented as far as possible."

A Russian schooner-rigged barque, the *Ernest Merck*, which recently arrived in Hull under false colours, has been seized by the principal officers of the revenue guard. The vessel was built about fifteen months ago, and her value, including the cargo, is about £7000.

The *Moniteur de la Flotte* states that the Minister of Marine has decided that two naval engineers shall proceed to England, to visit the establishments especially concerned with the construction of steam-engines, in order to see what improvements may be introduced into that branch of manufacture in France.

The Commander of Sveaborg has been dismissed and sent to prison. He had not only stolen the copper roof of the fortress, but also guns and ammunition. Instead of iron balls, he had heaped together wooden balls painted black. He destroyed two of the bastions, and planted orchards on them. The Czar, on a visit to Sveaborg, discovered his peculations.

John Holland and James Everett, of Sheffield, the former favourably known in the literary annals of that town, are engaged upon a memoir of the late James Montgomery.

A great musical festival, in commemoration of the 25th anniversary of the Society for the Advancement of Music in Holland, will be held at Rotterdam, in the second week of July. 800 performers are engaged.

M. Victor Hugo is said to have been offered £5000 sterling for a new philosophical novel just completed, entitled, "Les Misères."

The hay harvest is going on throughout the department of the Seine, and will, it is thought, be got in in excellent condition. The quantity is very great.

The Derbyshire gold-diggings, of which the Crown is the owner, promise to be worth looking after. The stuff analysed contains twenty-five ounces of silver per ton, and an ounce and a half of gold.

A religious sect, called the Jumpers, made their annual procession at Ashtenrash the other day. The number of the Jumpers is 8000; and, in their annual procession, no walking is allowed.

A new plant has lately been introduced into France, from China, the tubers of which, from their size and delicate flavour, are likely to serve as an excellent substitute for the potato.

The Emperor of Austria, in order to give an agreeable surprise to the young Empress during her late visit to Ploschkowitz, had a room in that chateau fitted up precisely in the manner which she occupied at Possenhofen; and her Majesty even found on a table some fancy work which she had left unfinished when she quitted her paternal residence.

A severe shock of earthquake was felt at Cosenza (Naples) on the 29th ult. The motion was both undulatory and subsultory, and lasted three seconds.

Twenty thousand peasants, with their scythes, have been ordered to the province of Bessarabia, by Count Wassiliankoff, the Governor of that province, in order to assist there in making hay, as the inhabitants of those districts are otherwise employed by the Czar.

The Archduke Leopold Salvator, of Piacenza, charged to conduct the prosecution of the persons accused of having been concerned in the assassination of the Duke, was mortally wounded by three stabs of a poniard on the 16th inst.

The Lord Provost St. George's Hall, it is said, will be opened for musical purposes in the course of the autumn, and Sir Henry Bishop is to be the conductor on the occasion. It is rumoured that her Majesty will be present.

Don Genaro Perez de Villaamil, one of the most distinguished painters in Spain, died a few days ago at Madrid, aged forty-seven.

The Lisbon Board of Health has declared all vessels from England and Scotland free from quarantine, but Irish ports are still kept under interdict.

During last year the Jewish Emigration Loan Society assisted 130 poor Jews to emigrate, by advancing part of their passage money and outfit.

The Lords Commissioners of her Majesty's Treasury have authorised a fixed scale of remuneration to the officers and clerks in that department, for attendance beyond the official hours.

A letter from Hong-Kong states that the Japanese Government has agreed to give the Americans two ports in Japan, and a coal depôt.

Mr. Buchanan, the chief emigration agent at Quebec, in a recent letter, says:—"Labour and service here are not to be had. I could employ 5000 men, at a dollar a day. Mechanics are also much wanted—wages, from one to two dollars per day."

The Town-council of Newcastle, on the motion of Sir John Fife, have adopted a petition to the Home-office, praying for the establishment of a separate bishopric of Northumberland; to include that county and the town of Newcastle, and having its seat in the latter; and to be supported by a portion of the present large revenue of the see of Durham.

The Board of Ordnance, have purchased, on the part of the Government, a large number, amounting to upwards of 20,0, of revolving pistols, from Colonel Colt, for the use of the public service.

NEW POSTAL REGULATIONS FOR THE ARMY AND NAVY.

The following are the Regulations under which the Correspondence for her Majesty's Forces in the Baltic, in the White Sea, and in Turkey and the Black Sea, is at present forwarded :—

Mails for the Baltic fleet are made up in London every Tuesday evening, and are forwarded, through Belgium, to Dantzic, where they arrive on Friday. Orders have been given that a steam-vessel shall be detached from the fleet, and sent to Dantzic weekly, to receive the mail from England, and to bring to that port the return mails for England, which, on arrival, are dispatched to this country through Belgium.

An officer's letter, not exceeding half an ounce in weight, sent by this route, is liable to a postage (British and foreign combined) of 8d. A seaman's or soldier's letter, not exceeding half an ounce in weight, forwarded by this route, is charged with a combined British and foreign postage of 5d. Upon both classes of letters the postage must be paid in advance.

Newspapers cannot be forwarded by the route of Dantzic, because, according to the arrangements with the Prussian Government, the Prussian postage upon *newspapers* cannot be collected in this country. If, therefore, newspapers were sent by this route, they would be detained at Dantzic, until the postage due upon them to the Prussian post-office was paid.

The above is the speediest and most direct communication with the Baltic fleet; but there are other occasions, by means of Queen's ships or transports, when letters and newspapers can be forwarded. Mails are made up to be dispatched by every vessel of war proceeding from England to the fleet, and the postage by such ships is as follows: For an officer's letter, not exceeding half an ounce, 6d.; for a seaman's or soldier's letter, not exceeding half an ounce, 1d.

Newspapers are forwarded by vessels of war, or transports, free of postage.

Letters, &c., for the Baltic fleet, should be addressed with the name of the ship for which they are destined, and the fleet to which that ship belongs, without mentioning any port or town, thus :—

"To ——
H.M. Ship ——
Baltic Fleet."

Mails for the Army in Turkey, and for the fleet in the Black Sea, are made up in London six times in each month (viz., the evenings of the 3rd, 8th, 14th, 18th, 23rd, and 28th or (when the month has 31 days) the 29th). These mails are forwarded, through France, to Marseilles, and are thence conveyed to Constantinople by the French mail-packets in the Mediterranean. By the favour of the French Government, no higher charge is made for the conveyance of the letters of British soldiers and sailors than that which is levied on the correspondence of the French naval and military forces. A letter, therefore, under a quarter of an ounce in weight, whether to or from an officer, a soldier, or a seaman, is liable only to a combined British and Foreign rate of 3d. If the letter weighs a quarter of an ounce, and is under half an ounce, the charge is 6d.; if it exceed half an ounce, and does not exceed one ounce, the charge is 1s.; and so on for heavier letters. The postage upon newspapers is 1*d*. each. The postage both upon letters and newspapers must be paid in advance.

The above is the speediest and most direct communication with the fleet in the Black Sea, and with her Majesty's forces in Turkey; but the letters of soldiers and seamen serving in Turkey and the Black Sea may also be forwarded to Malta, *viâ* Southampton, twice a month—*viz.*, on the mornings of the 4th and 20th—for the sum of one penny, under the usual regulations applicable to such letters. From Malta they are sent to their destination as opportunities offer, by a ship of war or other vessel in the service of her Majesty, without any further charge.

At the same rate of one penny, letters may also be forwarded by any vessel of war, or hired transport, proceeding from England to Turkey. By these opportunities, newspapers are transmitted for a postage of one penny each, which must be paid in advance.

Letters, &c., for the army in Turkey should be addressed to the regiment to which the officer or soldier belongs, with the addition of the words, "Army in Turkey," but without any further local address.

Letters, &c., for the fleet in the Black Sea, should be addressed with the name of the ship for which they are destined, and the fleet to which that ship belongs, without mentioning any port or town, thus—

"To ——
H.M. Ship ——
Black Sea Fleet.

Mails for the British squadron in the White Sea are forwarded from Hull every Friday by private steamers proceeding to Christiania, whence they will be dispatched by the mail-packets of the Norwegian Government.

An officer's letter, not exceeding half an ounce in weight, sent by this route, is liable to a postage (British and Foreign combined) of 1s. A seaman's letter, forwarded by this route, not exceeding half an ounce in weight, is liable to a postage (British and Foreign combined) of 9d. Upon both classes of letters the postage must be paid in advance.

The above is the speediest and most direct communication with the White Sea squadron; and all letters upon which the requisite amount of postage has been prepaid will be so forwarded, unless otherwise addressed.

Letters for the squadron will also be forwarded, should opportunities offer, by any ships of war, or vessels in her Majesty's service, proceeding to the White Sea, and upon letters so transmitted, the postage, which must be prepaid, will be—For officers' letters, 6d. the half ounce, according to the scale for charging inland letters. For seamen's letters, 1d. when sent under the usual regulations.

By ships of war, or vessels in her Majesty's service, newspapers are transmitted free of postage.

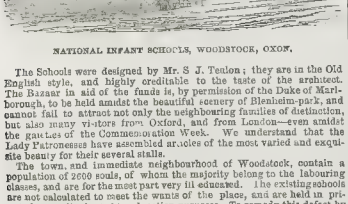
Letters, &c., for the White Sea Squadron, should be addressed thus :—

"To ——
H. M. Ship ——,
White Sea."

General Post-Office, June, 1854.

WOODSTOCK NATIONAL SCHOOLS BAZAAR, IN BLENHEIM PARK.

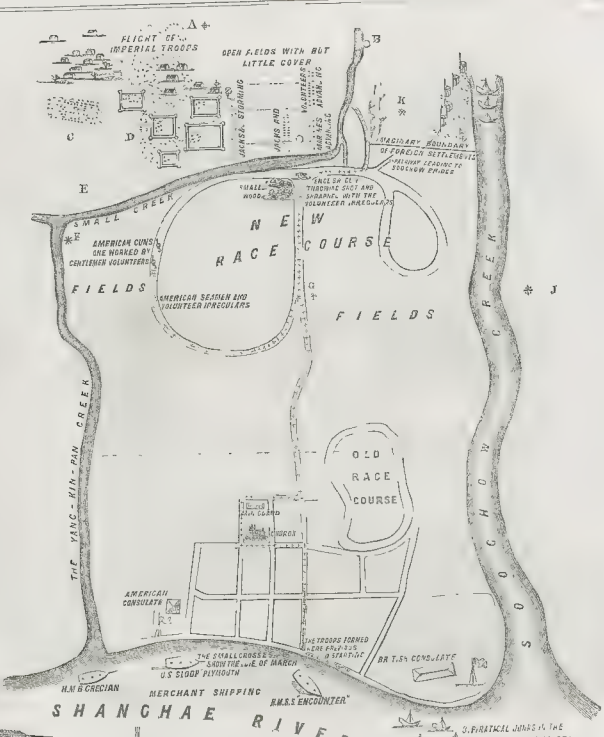
The accompanying Vignette represents the National Schools now erecting at Woodstock, in behalf of which a Bazaar will be held on Monday and Tuesday next, 26th and 27th inst., in the Park at Blenheim, under the patronage of the Marchioness of Blandford, Lady Churchill, the Countess of Abingdon, &c.



NATIONAL INFANT SCHOOLS, WOODSTOCK, OXON.

The Schools were designed by Mr. S. J. Teulon; they are in the Old English style, and highly creditable to the taste of the architect. The Bazaar in aid of the funds is, by permission of the Duke of Marlborough, to be held amidst the beautiful scenery of Blenheim-park, and cannot fail to attract not only the neighbouring families of distinction, but also many visitors from Oxford, and from London—even amidst the gaieties of the Commemoration Week. We understand that the Lady Patronesses have assembled articles of the most varied and exquisite beauty for their several stalls.

The town and immediate neighbourhood of Woodstock, contain a population of 2600 souls, of whom the majority belong to the labouring classes, and are for the most part very ill educated. The existing schools are not calculated to meet the wants of the place, and are held in private houses ill-adapted to education purposes. To remedy this defect by providing National Schools in connection with the Church of England, three several schools, for boys, girls, and infants, are now erecting, the estimated cost of which will be about £1000. Ground for the site, and all the stone and slating requisite for the work, have been given by the Duke of Marlborough. Liberal contributions have been promised by all the principal inhabitants of the town, and by some of the clergy and gentry in the neighbourhood; and the usual assistance will be granted by the Committee of Council on Education. Notwithstanding these aids and appliances, a considerable amount is still required to complete the sum necessary for the construction of the buildings; and, to provide this, the ladies interested in Woodstock and the vicinity will hold this Bazaar, and earnestly request the patronage and assistance of all who feel the importance of providing education for the labouring-classes, on the principles of the Church of England.



A Shows position of Gentlemen Volunteers under cover of cottages, firing on Imperialists whenever they attempt to rally.
B Shows position of Volunteers behind graves when Junks opened fire.
C, Advance of Rebels from City to plunder Camps, but which were set fire to as soon as taken.
D, Chinese intrenched camps, containing about 4000 men, with strong walls of turf and mud.
E, Old shrubbing ground of Rebels and Imperialists. High grasses in all directions.
F Shows the position to which the Americans advanced to storm, and where all the casualties among them occurred.
G, This was the point of halt, where the English and American troops separated to enable them to attack from two points.
J. Advance of 300 Imperialists, who were kept at bay by our field-piece. Rear-guard not mounted under its protection.
K Shows position of Rear-guard (six Volunteers and six Marines), firing from behind high grave-mound, to prevent any advance from Creek.

*** The various roads and the race-courses have been made by foreigners. The Chinese roads are mere pathways, not more than three or four feet wide. The Chinese encampments were shelled for about half an hour, and were then taken by the advance of the British southward, and the advance of the Americans westward. It was during this advance that all the casualties occurred: three killed; two dangerously, and six or eight less so, wounded.

SHANGHAE AND ITS VICINITY, SHOWING THE RELATIVE POSITIONS OF THE FORCES (AND PLACES), ON APRIL 4, 1854.

SHANGHAE.

STORMING OF THE ENTRENCHED IMPERIALIST CAMPS BY THE BRITISH AND AMERICANS.

We quote the following intelligence from the *North China Herald*, just received, with the accompanying plan of the operations :—

"In consequence of the attack made by the Imperialists, upon the foreign settlement, on the 3rd of April, the evacuation of all the camps adjoining the Riding Course, was demanded by her Majesty's Consul on the 4th. The representatives of France and America agreed with her Majesty's Consul, as to the absolute necessity, with a view to the safety of the foreign community, of enforcing this demand. Accordingly, the Imperialist authorities were informed, that, failing the abandonment of the camps by four p.m., the naval forces of Great Britain and the United States would proceed to occupy them by force of arms.

"At half-past two p.m. the men were landed from her Majesty's ships *Encounter* and *Grecian*, and from the American sloop *Plymouth*. They were drawn up in front of the church, until a few minutes before three o'clock, when, no pacific communication having been received, the columns moved forward, accompanied by the Shanghae Volunteers, to take up their positions. A halt was made half way up the riding course, while the officers went forward to reconnoitre. On their return, the attack was given to advance. The Americans, under Captain Kelly, accompanied by Mr. Murphy, United States Consul, and several volunteers, took the left branch of the ground, with three guns. The British, under Captains O'Callaghan and Keane, accompanied by her Majesty's Consul and Mr. Wade, who commanded the volunteers, took the right, with one field-piece. There was a further halt at the end of the course, during which an evasive communication was received from the Taoutae. No signs of moving being apparent in the camps, and the Imperialists having already opened fire upon the American column, the order to engage was given. Shells were thrown into the camps from the field-piece, under Lieutenant Montgomery, of the *Encounter*, with great precision and effect; while the main body of the British naval forces, in conjunction with the volunteers, moved on to occupy them. To effect this a *détour* had to be made, beyond the Riding-course, as the bridge which formerly led across the Yang-king-pang Creek, had been previously broken down.

"The creek was crossed at the wooden bridge, to the westward of Paddy Bird Grove. Six marines and six volunteers, were stationed at this point, to protect the rear of the attacking party. On crossing the bridge, the regular forces under Captains O'Callaghan and Keane, advanced to the south-eastward, while the volunteers under Mr. Wade, advanced to the south, so as to cover the flank of the main attack. The shelling had now begun to take effect, and numbers began to rush from the west side of the camps. As our men advanced upon the north front of the most northerly camp, numbers of soldiers were visible behind the embankment. On their nearer approach, and as they were concentrating upon a gateway leading into the camps, before the columns moved forward, accompanied by the Shanghae Volunteers, to take up their positions. A halt was made half way up the riding course, while the officers went forward to reconnoitre. On their return, the attack was given to advance. The Americans, under Captain Kelly, order

SKETCHES FROM THE SEAT OF WAR.

BOLEIA, NEAR GALLIPOLI.—SKETCHED BY AN OFFICER OF THE EXPEDITIONARY FORCE.

Riza Pacha, Marshal St. Arnaud, and Lord Raglan come on shore in the afternoon, inspected the fortifications, &c., and about midnight started for Schumla, in company with Omer Pacha, as they were anxious to see the country and the Turkish troops.

GALLIPOLI.

THE wretchedness and desertion of the villages about Gallipoli, and the reckless look which characterises them, are exemplified in Boleia. This village crowns with ruin a parcel of dry, dusty ravines, the bottoms of which constitute its streets. In these, besides the rubbish of ages never removed to the fields, lies a whole museum of bones and vertebræ in most unwholesome disorder. When the buffalo draws its life to a close, it lies down among the stones by its owner's door, and dies; the ill-visaged cure watching on the ridge see it die, and very soon devour its remains. On every broken tree, chimney, or roof presides a stork. The accompanying Illustration of this desolate scene is from a Sketch by an Officer of the Expeditionary Force.

KURDISH TROOPS AT SCUTARI.

The accompanying cortége of Kurdish cavalry has been sketched by our Artist at Scutari, where they formed part of the escort of Kara Fatima, Queen or Prophetess, the new ally of the Sultan. Her company consists of 300 horsemen, whose costume and general appearance is very picturesque. Kara herself comes from Marash, a town of Kurdistan. The Kurds are a wandering tribe of Persia, whose courage, in the event of a general war in Asia, would render them a formidable ally. They effectually protect the frontier; but have themselves also become robbers, and frequently lay waste the neighbouring valleys and plains.

THE FRENCH FLEET AT KIEL.

Our Artist's Sketch represents the greater part of the French Baltic Fleet at Kiel, riding at anchor, opposite the beautiful establishment called Bellevue, belonging to a most charming watering-place, Dustern-brook, from which it is about one (English) mile distant.

The fleet consists of sixteen vessels, under the command of Vice-Admiral Parseval-Deschênes, viz.: eight line-of-battle ships, four frigates, and four steamers; they are, the line-of-battle ships, *L'Inflexible* (Admiral's ship) 90 guns; *L'Hercule*, 100 guns; *Le Trident*, 80 guns; *La Tage*, 100 guns; *Duguesclin* (flagship, Contre-Admiral Penaud), 90 guns; *Breslau*, 90 guns; *Jemappes*, 100 guns; *Duperré*, 80 guns. The frigates, *La Pourvoyeuse* (flagship), 52 guns; *Zénobie*, 52 guns; *Andromaque*, 60 guns: *La Virginie* 50 guns. The steamers are gone a little farther off, more into the harbour, and are lying close to the town of Kiel.

On Thursday, the 25th May (Ascension Day) immense crowds of people from all the neighbouring places, and particularly from Hamburg and Altona, went down to Kiel to see the fleet. There were several special trains that day from Altona, which, however, could not even accommodate all that wished to go; and on returning, about a thousand people were left behind at Kiel. All visitors were received on board the ships with great politeness, and very great attention was shown to the ladies.

KURDISH CAVALRY.

THE FRENCH FLEET AT KIEL.

THE CRYSTAL PALACE, AT SYDENHAM.

FETE AT THE PALACE.—Saturday was one of the most brilliant days that the season has yet produced. The Crystal Palace, owing to the inauguration dinner given by the Directors, and to the prestige which attaches to Saturday as the fashionable and exclusive day. Many of the Ministers, however, who had accepted invitations, were unavoidably compelled to be absent, in consequence of a Cabinet Council being held at the same hour. The entertainment took place in one of the large apartments on the ground floor, looking out upon the terrace; and during the morning one-half of the transept was railed off for the purpose of forming a promenade for the invited guests. The chief table was arranged in the form of a half-moon, the horns terminating at the terrace front. The other tables—thirteen in number, of unequal lengths—fill d up all the intermediate space; each of them being presided over by a director or shareholder alternately. The chair was taken, shortly after three o'clock, by Mr. Laing, the Chairman of the Directors. He was supported on his right by Count Lesseps, the French Commissioner; and on his left by the Prince of Carini, the Commissioner of the Italian States. The number of guests present was about 600, and amongst them were the Duchess of Montrose, the Earl and Countess of Howe, the Baron de Mornay, the Countess Luvradio, the Sicilian Minister, the Earl of Carlisle, Earl and Countess of Shaftesbury, the Lord Chief Justice, the Bishop of Oxford, Lord Robert Grosvenor, M.P., the Earl and Countess of Chichester, Earl of Hardwicke, Lord Stanley, M.P., Sir J Pakington, M.P., Lord Mahon, the Lord Mayor, the Duchess of Sutherland, the Duchess of Argyll, the Marquis of Granby, M.P., Mr. Liddell, M.P., the Princess Carini, Mdlle. Macedo, the Brazilian Minister, Dr. Wagen, Count Klingememann, the Earl and Countess of Mulgrave, Lady Donerailе, the Marchioness of Aylesbury, the Earl and Countess of Zetland, the Earl of Harrowby, Sir Robert Peel, and a number of foreign representatives, whose names were not ascertained. The entertainment was of the most sumptuous description, the tables being decorated with a profusion of rare exotics and emblematic devices. The Chairman gave in turn the health of the Queen, which was received with vociferous demonstrations of loyalty; the health of Prince Albert, to whom he referred as the originator of the Crystal Palace; and the healths of the rest of the Royal family.—The Chairman next gave "The Foreign Representatives," and, in the course of some observations, he paid a well-received compliment to France. Among the many beneficial influences of the Great Exhibition of 1851, which had originated the present undertaking, none was more important than the perpetuation of the humanising influences which had brought the representatives of all the nations of the earth in peace and goodwill together, and which had been exerted so conspicuously on that occasion. He looked upon that as one of the greatest triumphs of their modern civilisation. For many centuries the nations of the world had been kept asunder by a variety of hostile influences; but these were fast disappearing, through that facility of intercommunication given to us by the agencies of steam locomotion and the electric telegraph, as well as by that enlightened system of commercial legislation by which private industry was made free. After the Count Lesseps had replied to the compliment and, in the course of some observations, he paid a well-received compliment to France. Among the many beneficial influences of the Great Exhibition of 1851, which had originated the present undertaking, none was more important than the perpetuation of the humanising influences which had brought the representatives of all the nations of the earth in peace and goodwill together, and which had been exerted so conspicuously on that occasion. He looked upon that as one of the greatest triumphs of their modern civilisation. For many centuries the nations of the world had been kept asunder by a variety of hostile influences; but these were fast disappearing, through that facility of intercommunication given to us by the agencies of steam locomotion and the electric telegraph, as well as by that enlightened system of commercial legislation by which private industry was made free. After the Count Lesseps had replied to the compliment of the Chairman, the Earl of Carlisle, who was received with loud cheers, proposed, "Success to the Crystal Palace." "Success, then, to the Crystal Palace, partly on account of that liberal breadth which has distinguished the whole conception, principle, and design; for while, as we saw last week, crowned heads and their representatives, and universities and municipalities, the great, the learned, and the fair, crowded round its cradle and blessed its auspicious birth, there is not an obscure class of society, there is not a struggling son of toil, for whom it does not store up and throw open its treasures, whether for blameless recreation or wholesome instruction; and, while its contents may minister to the most refined taste and to the soundest knowledge, it seeks to provide for the common, the public, the universal enjoyment and improvement (Great cheering). Success to the Crystal Palace, since to those who, by their circumstances, to the Crystal Palace, since to those who, by their circumstances, to their means, or their duties, are confined to the narrower circuit of our own shores, it extends some, at least, of the pleasures and advantages which have been heretofore exclusively confined to the wealthy or the unoccupied (Hear, hear). I, myself, who now thus venture to address you, come here fresh with the most recent impressions of all that is most lovely in nature and most admirable in art. Yet, when I wander into the Greek, the Italian, or Byzantine Court above, I can almost feel that I am again gazing at the glittering cupolas of St. Sophia or St. Mark's, or upon those masterpieces of Phidias which still remain on their own immortal rock (Cheers). Yet, in those delicious climes the thought will too often obtrude itself which is contained in the expressive line of one of our own poets, that—

All, save the spirit of man, is divine—

(Hear, hear); but here, under our weeping skies and amid our murkier atmosphere, the spirit of man has been enabled to recall the foliage, the blossoms, and the odours of the tropics, and to retrace the unsurpassed forms of human genius. Success, again, to the Crystal Palace! because throughout its birth, its growth, and its maturity, it has been the work of private enterprise (Cheers). It is the wish of my heart that many a happy generation may there themselves beneath its gleaming roofs, all along its well-stored courts and suggestive galleries, or among its gay parterres and lordly terraces, and there feel the thrill of gratitude to that Creator who has implanted in their souls the sense of beauty, to learn lessons of that lovely reverence which offers up all the treasures of this world as an incense to the God of All" (Great cheering) There were 4333 five shilling visitors, and 7428 season-ticket holders; being a total of 11,761 admissions to the Building on Saturday

His Royal Highness Prince Albert, accompanied by the King of Portugal and his Royal Highness the Duke of Oporto, visited the Palace on Tuesday morning at ten o'clock. They were attended, during their survey of the Building and Park, by Mr. Fuller, Mr. Owen Jones, Mr. Waterhouse Hawkins, and other officers of the Company, and expressed much gratification at what they saw. The number of admissions for payment at the doors in the course of the day was 11,922, and of season-ticket holders 1338; making a total of 13,258. As an example of the success which thus far attends the exhibitors' department, we may state that during the past week the agent of the French Munich Company, which has taken space in the Mixed Fabric Court, sold 700 pounds of glass. A magnificent display of the manufactures of Sèvres, Gobelin, and Beauvais, contributed by the Emperor Napoleon, has been unpacked in the French Court. Among the objects thus liberally sent over are three splendid vases, and two exquisite specimens of painting on porcelain.

GUIDES TO THE CRYSTAL PALACE.

A series of volumes under this title have been published by Messrs. Bradbury and Evans, under the sanction of the Directors of the Crystal Palace; and are to be considered the official handbooks, or guides, to the beauties of that wonderful structure.

1. *A Guide to the Palace and Park.* By Samuel Phillips.

This volume affords a general view of the Palace and its adjuncts, leaving the details to the Handbooks devoted to their separate description. The summary, as might be expected from the position of the writer, is sufficiently rose-coloured; but the design is so stupendous, and its fulfilment within so short a time so wonderful, that we cannot be surprised at the enthusiasm of the language of its panegyrist, when the highest need of approbation is deserved even from the coldest outside critic. Speaking for ourselves, and not from motives for optimism which might be suspected having a source in private feeling, we are free to say that no eulogy which could be pronounced on this great work would seem to us beyond what it has justly earned. It is a marvellous monetary speculation, no doubt: but in the invention and collection of its attractions it does appear, that the love of lucre has not predominated over superior aims. On the contrary, pure taste, refinement, and science, the combining of educational elements and advanced instruction, something to promote the progress of the people and elevate all classes of the community, have entered so largely into the objects of the Directors, that we cannot help thinking the most prominent of their profits will consist in the good feelings and prosperity their labours are calculated to produce among millions of their fellow men. Having expressed this impartial opinion, to guard against any deductions that might be drawn as to our blindly enrolling ourselves in the corps of laudators, so naturally formed under the circumstances of this joint-stock pushession, we dismiss that superfluous portion of the case, and proceed to a brief notice of the leading characteristics of these performances.

Mr Phillips informs us that the Crystal Palace and its Grounds occupy two hundred acres, and that in the Gardens the same uniformity of parts is adhered to as in the Building itself—that is to say, the width of the walks, the width and length of the basins and fountains, the length of the terraces, the breadth of the steps, are all multiples and sub-multiples of the one primary number of eight. He appeals to a striking harmony being thus produced, without the spectator being aware of the cause. *Apropos* of this subject of dimensions—one of our best authorities stated to us on Saturday, in the Palace, that, without having made an exact calculation, he estimated the space in cubic feet to be nearly the same in the Hyde-park and Sydenham erections.

A history of the undertaking shows the enterprise, skill, and judgment of its projector—the originator of the idea being Mr. Leech, of the firm of Johnston, Farquhar, and Leech, solicitors, who communicated his idea to Mr. Francis Fuller (now Managing Director), which that gentleman—so exp rienced in the first Building, and so able to work the new plan to an eligible shape—having adopted, it was carried into effect in the spirited way the public has witnessed. England and the Continent were explored for objects to occupy the immense space, so soon to be covered with glass; and, with the exceptions of Rome (the Pope), Fedna, and Vienna abroad, and the church-gardens of Beverley Minster, at home, the missionaries were everywhere received with welcome, and permission given to make their casts and copies of remarkable objects. To afford a notion of the exertions made, at one time during the progress of the works there were as many as 6400 men employed by the Directors.

One of their chief difficulties has been to obtain the needful supply of water, the want of which—though it will be obtained in a few weeks—was the principal drawback on the spectacle of Saturday, the 10th inst. An Artesian well has been sunk at the foot of the hill, where water was found at the depth of 250 feet. It is now carried 870 feet from the surface; and the short space of time we have mentioned is stated to be sufficient to complete the operations, and secure water enough for all the novel displays intended by Sir J. Paxton and the re-creators (happily only in inanimate compositions of clay and plaster) of the extinct monsters which inhabited our planet long before man was made an inmate of it.

2. The Handbooks intermingle so much, that it is not easy to speak of them chronologically or distinctively. So we will class them as well as we can, on other grounds.

Messrs. M. Digby Wyatt and J. B. Waring are the authors of four, illustrative of the Fine Arts.

The Handbook to the Byzantine Court

may be taken as the model in construction, identical with all the rest. A Notice relates to the parties who executed the works, &c., and an Introduction gives the writer's opinions upon the value of the subject he has helped to embellish, or now describes; and in several instances, an interesting historical retrospect, as is the case with the volumes of Mr. Wyatt, who has evidently read and studied much in the way of his calling. Here he traces the Byzantine as the link between the Roman (another volume to be mentioned hereafter) and the Gothic; and panegyrizes, as it ought to be panegyrised, the Pointed Arch style, and all its accessories. The three eras of the Byzantine, as far as may be exhibited in the Palace, are well defined; but the second alone, viz., from Justinian, in the sixth, to the eleventh century, is dwelt upon; and its beauties, peculiarities, and widely-spread influences, are lucidly set forth. But we opine that the visitors to the Palace will be more interested in the Irish, Scottish, and Manx crosses, &c., to which Mr. Wyatt refers in this book, and represented in the Gallery—the entrance to which is a copy of the chancel arch of Tuam Cathedral, as many of the parts throughout the Palace are of other interesting architectural and antiquarian remains. Venice crosses hands as indigenous and very early school of art, and connect that period with the fierce Scandinavian invasions and conquests, which is at the present moment being more carefully investigated and developed by the Society of Northern Antiquaries at Copenhagen. Ireland, Scotland, and the Isle of Man, a close intercourse must have prevailed; and many Runic crosses and inscriptions in the last mentioned still bear testimony to the North men's visitations; yet they are less advanced, as work of art, than those centuries more ancient that remain in Ireland and the west of Scotland: they are about the eleventh century, when the Bishops of Man were Norwegians.

Handbook of the Mediæval Court.

One of the finest things here is a copy of an altar-frontal from Westminster Abbey—not long ago a show among the trumpery wax-works, for a sight of which the attendant visitors paid a small extra fee; but all the contents of the English division are particularly interesting, and justice is done to the multitude of subjects, however confined to brevity, by Mr. Wyatt. We felt this interest much increased by having so many specimens all collected together and brought within the scope of a single view. Antiquaries and artists will be greatly beholden to this Court; and even the average public will like it, till the time may come when, instructed here and elsewhere, by similar lessons on a comprehensive system, they will learn to judge, as well as love and admire, the true beauties of elder days. The foreign additions augment the pleasure; and, with the Effigies Gallery, as a study for costume, the whole of this part of the Palace is extremely appropriate, and the Guide is worthy of it.

Handbook to the Renaissance Court.

A *coup-d'œil* over the origin of this style, and notice of the most prominent writers upon it, leads to the catalogue description of the material. It has been the fashion of late years, like our recent pre-Raphaelism, in a desire to fall back upon nature, and ignore the conventionalities of the antique Roman. Great works were produced then; and, as Mr. Wyatt does not descend to the days of Louis Quatorze, we need not point out results in mixed conditions of the art. His Renaissance, and that exhibited, is of earlier date; and his description of the Courts, with the biographical notices of artists and subjects, is well done, and to the purpose. He alludes to the Elizabethan Court, where examples of this style are given from Holland house, and we may ourselves note a peculiarity belonging to this reign which is, we fancy, very little known. In flattery to the Virgin Queen, the nobles who built mansions during her long despotic sway, were wont to allow their Renaissance to adopt the form of the initial letter E, the three protuberances proceeding from the fronts; of which a striking instance is visible in Sir M. Wilson's seat at Charlton.

Handbook to the Italian Court.

Here the art returns more to the antique, and again, to a certain extent, supersedes nature. The English architects, however, flourish in power and originality; and we have to add to these, as Owen Jones, Wyatt, Vanbrugh, Chambers, Adam, and the rest. The Guide merits equal commendation to the three preceding.

3. *Handbook to the Courts of Modern Sculpture.* By Mrs. Jameson.

This also belongs to the Fine Arts, and the name of the writer is enough to ensure its being well done. The introductory essay is one of the most instructive of the series, and the criticisms in the best possible taste—kindly, but not misleading. The collection is as yet incomplete, but time will do what is wanted. In her remarks, Mrs. Jameson renders due tribute to the genius displayed by Gibson in his bas-reliefs; to Marshall, Bell, Lough, and other native artists, who have works in the Gallery, as well as to Thorwaldsen and other eminent foreigners. Her lessons on art, and its capabilities generally, are worth attentive consideration.

4. *The Portrait Gallery*, by S. Phillips,

Follows after the same manner: enumerates the portraits already placed, and compiles, well-written, the necessarily short notices of the artists, &c., from Biographical Dictionaries and referable authors. Criticisms upon living individuals, whose portraits appear, do not seem to have been called for; and are liable to controversy, as opinionative and out of place. Thousands may yet, and probably will be, added to this exhaustless Gallery.

5. Science demands her quota; but there are only two *brochures*—*Handbook to the Courts of Natural History*, by Dr. Latham and Professor E. Forbes; and *Geology and Inhabitants of the Ancient World*, by Professor Owen.

In the former, ethnology occupies seventy-nine out of ninety-two pages, so that zoology and botany are curtly disposed of. When the Garden, however, assumes its proper attractions, the Guide will be required for these attractive subjects. Meanwhile, Mr. Latham has ably described that contribution to science which is so much his own, and which, if

The noblest study of mankind is man,

ought to hold a foremost rank in any institution claiming to be educational. What though the are but figures. No lettered descriptions could afford us such information respecting the various races of mankind—Thibetans, Javanese, Dyaks, Negroes, Kotcoudes, Bushmen, Greenlanders, &c. The catalogue is a resumé, as much as is requisite, of the author's more important works, and is not unworthy of his reputation.

6. The second and last in this class, *Geology and Inhabitants of the Ancient World* will entice as many visitors as any of the other departments; and Professor Owen has given a nice little stimulant to the universal appetite for the wonderful. On Saturday last the huge gigantic restorations did little honour to the great science which had embodied them. They lay high and dry on gravel walks, and had no forests to eat up nor waters to wallow in. The chalk, the wealden, the oolite, the lias, and the new red sandstone, gave up their old and terrible forms in vain. Their place has yet to be made for them; but short as our English Cuvier's account is, it is clear and masterly.

7. With the single exception of the *Alhambra*, the rest of these publications rank under the name of Antiquities; and three of them are from the competent pen of Mr. George Scharf, jun. Before arriving at them, however, we have

The Assyrian Court, described by Mr. Layard—the foremost authority upon the subject of the antiquities here represented. The book is an applicable abridgment of his very popular works, to which almost the latest accounts from the locality of his noble exertions are added. Every arrival, we rejoice to say, is adding fresh materials, fresh treasures, in corroboration of the historical portions of the Bible. Mr. Fergusson, whose research and learned writings on Assyrian and Oriental architecture have thrown so much light upon the subjects, has, we observe, superintended the execution of the designs in the Courts devoted to Nineveh and its precious exhumations, and thus afforded another voucher for their authenticity.

The Egyptian Court. Described by Owen Jones.

The models in this Court are on a reduced scale, the magnitude of Egyptian monuments forbidding any realisation of size. With the aid of Mr. Samuel Sharp and Mr. Boncui, not only are they accurately and well displayed, but correctly and learnedly explained.

8. *The Greek Court.* By George Scharf, jun.

In the Greek Court great pains have been taken to be correct in the curves and mouldings, and to illustrate the peculiar features of Greek architecture. The Temple of Jupiter, at Ægina, in Argolis, is the order chosen; and, where the artist has been obliged to depart from known Greek arrangements, on account of there being no entire monument left for reproduction in exact simile, he has exercised, as it appears to us, much judgment in assimilating his component parts from various other sources, into such a general design as a Grecian architect might have been likely to adopt. Mr. Scharf, in his Guide, puts together concise and judicious observations on the Elgin marbles, and several ages of Greek art—viz., the age of Peisistratus, the Æginetan, Athenian, and Macedonian ages. The description of the mythic figures and sculptures, &c., are also very sufficient for the purpose.

9. *Apology for the Colouring of the Same.* By Owen Jones.

Mr. Owen Jones's "Apology" states and discusses the vexed question respecting the colouring and gilding of Greek temples and statues He maintains, not only that their white marble domes were ornamented with colour, but that they were entirely painted over, having a thin coating of stucco to stop the absorption of the colours by the stone. Their terra-cottas, he affirms, were similarly treated; and also Egyptian buildings and statues, the exemplars of their arts Upon this theory—in support of which he has adduced strong evidence, including historical notes, and chemical analyses of the colouring matter (picked off the objects) by Faraday—he has ventured to paint the Court, and even horses, in tolerably bright tints, though, he says, in a lower key than he believes the originals to have been painted.

10. *The Pompeian Court.* Described by G. Scharf.

This Court is one of the most interesting in the Building, and has altogether a beautiful effect. The ceilings and cornices, and other ornamented passages, possess infinite taste and elegance. We could have wished that the allegorical and characteristic figures had adhered more strictly to the antique, every departure from which is a step towards the commonplace or vulgarity. From Tacitus, Pliny, Gell, Bulwer, and the latest descriptions, Mr. Scarf has produced a pleasing and intelligent volume.

11. *The Roman Court*, by the Same, is ably sketched and interpreted.

12. *The Alhambra.* By Owen Jones.

Here Mr. Jones is perfectly at home. It is many years since his magnificent work on the "Alhambra" was published, and it was probably in consequence from that publication that the present variety was added to the Courts of the Crystal Palace. It is certainly not the least novel and interesting of the number. As its just encomium, we may quote a verse from an Arabian poem in honour of its Moorish builder:—

Look attentively at my elegance, thou wilt reap the benefit of a commentary on decoration.

Mr. Jones, in his introduction, lauds the Crystal Palace still higher as a source for cultivating the national taste; and says, "if the Art Collections are received by the public in the right spirit—not simply as material enjoyment for the eye, but as affording subjects for contemplation and study—the Exhibition of 1851 cannot fail to exercise a most important influence upon the arts of this country. It may become the commencement of a new era, in which public taste will be raised from its present low standard, and our age, perhaps, but sure steps, be prepared to rank with the most brilliant periods of the past."

So mote it be! The effort to render this service to mankind is, at least, worthy of every praise; and there cannot be a doubt that, from the contents of the Crystal Palace, a vast amount of information may be acquired, a great degree of taste be cultivated, and a thousand lessons of wisdom learnt. Within the last thirty years our Botanical and Zoological Gardens, and other useful institutions, have done much towards feeding and exercising the intelligence of the people; and it is a noble stride in the right direction to see a museum, a temple, a mighty and brilliant transparency like this created within a few short months, and so richly stored with treasures as almost to exhaust the imagination, and yet set so plainly before the sight, that he who runs may read the whole of the inculcable volume.

We have only to add, that the engravings and illustrations, profusely given in these sixteen Handbooks, are quite in unison with their textual merits.

UNITED LAW CLERKS' SOCIETY.—The twenty-second anniversary dinner of this association was held on Thursday evening, at the Freemasons' Tavern. Sir W. Page Wood was in the Chairman; and Chief Justice Knight Bruce, Justice Turner, Mr. Serjeant Shee, and several gentlemen connected with the Chancery Bar were present. The Report was read by the Secretary; and a very handsome subscription made for the funds of the Society. Several toasts in connection with the Law were given during the evening; and the vocal department, under the superintendence of Mr. George Genge, was ably assisted by Miss Poole, Mr. F. Frodsham, Mr. Kennedy, and Mr. Lawler) performed its duty with entire satisfaction.

M. CLAUDET'S DAGUERREOTYPE GALLERY.—The reception-room of this establishment has been rebuilt, in the Anglo-Saxon style, after drawings by Messrs. Banks and Barry. The interior is very appropriately decorated with fourteen medallion portraits of the inventors and improvers of photography, and of the philosophers and artists who discovered the principles which led to the invention of those two arts; amongst others Porta, who, about 1590, invented the camera obscura; Daguerre, the inventor, in 1839, of the photographic process on silver, called daguerreotype; Talbot, the inventor, in 1839, of the photographic process on paper, called talbotype; Wheatstone, the inventor, in 1838, of the stereoscope, an instrument elucidating the principle of binocular vision, by which two flat pictures of the same object can give the illusion of it singly in perfect relief. Newton, Wollaston, Dalton, and Arago, whose discoveries are too abstruse to need particular mention. Brewster, Leonardo da Vinci, the first alluded to the phenomenon of binocular vision; Scheele, who first pointed out the chemical properties of the chloride of silver, the principle of the daguerreotype image, by which colours can be applied, who also discovered a very ingenious process for etching, by chemical action, by daguerreotype plate; and Niepce de St. Victor, who has added to the process of photography on paper the mode of taking negatives on albumenised glass, and who has been the first to use temporarily the chloride of iodine to increase the camera obscura. His idea is a very good one, and has been well carried out.

THE STALE-QUO CHESS-BOARD.—In this invention a convenience long since desiderated by chess-players has been attained—viz., the peremptory and instantaneous fixing of the men, and the power of deferring the completion of the game. A simple, but most effectual, mechanical process secures these advantages. By pressing a pair of small buttons on the outer rim of the board, the pieces are secured firmly on whatever squares they may happen to be; while a counter pressure on the button in the inside as immediately releases them. The value of a chess-board of this character does not require to be pointed out. Students of the game—those who investigate the theory of openings, who try combinations, and who work out problems, with a view to elucidate and confirm principles—will perceive its utility at a glance; while players of a less critical class will not be uninterested to know that a board is now within their reach which will allow them to discontinue a game at will, and recur to it just as often as opportunity permits. The action of the *Stale Quo Chess-board* is quick and facile. It is, as far as we have had the means of testing, not liable to disarrangement, and does that completely which it undertakes to do It is, in short, an ingenious piece of mechanism, and reflects great credit upon the inventor and patentee, Mr. John Jaques, of Hatton-garden.

A PLEA FOR THE MERCHANT SERVICE.*

The condition of our merchant service is beginning to attract the attention, with a view to amelioration, which it has long stood in need of. The increasing demand for hands, occasioned by the recent impetus given to emigration, and to our colonial trade; and later still by the requirements of a state of war, in the face of an insufficient supply, has been attended with serious inconvenience and loss to our shipping interest; vessels being frequently detained in harbour for want of men to work them, or—awkward alternative—forced to put to sea with insufficient and unmanageable crews, the bulk of which, for the first week's voyage, have proved little better than so much live lumber. Fearful disasters, as in the cases of the *Tayleur*, the *Dalhousie*, and the *Europa*, have multiplied in consequence, to the dismay of shippers, passengers, and all who have occasion to cast their treasures upon the waters in such frail and reckless keeping. Steps towards improvement have been taken, however, in Government quarters, or rather, as we should say, are about to be taken; for nothing has yet been actually done in the matter, beyond indicating the first course of procedure. Dr. Lyon Playfair states that he was "in the act of receiving instructions from the President of the Board of Trade, in regard to the general promotion of Schools of Navigation in our principal sea-port towns," when the author of the work before us called upon him, and asked him to aid him in passing it through the press. The request, harmonising so well with official duty on hand, was willingly acceded to, and the result is the production of this well-timed work, which, if it do not pretend to exhaust the subject, will afford many useful suggestions for its treatment.

The author is a thorough sailor—having, in the course of a long apprenticeship, had actual experience of every branch and every requirement of the service. Moreover, he loves his profession, and seeks its advancement in efficiency, and to that honourable *status* which he considers it to be entitled to hold. His observations are full of practical good sense—touching with more or less precision upon almost every duty, incident, and interest involved in the sailor's life, both before and behind the mast:—as elementary instructions to those entering on a sea life; hints to a youth who is in earnest; description of "types of youths of promise," and the reverse; suggestions connected with the loading of a ship, keeping the log, watches, &c., which will prove of value to those [illegible] to aspire to rise to distinction. In connection with the "log," Captain Methven especially insists upon the importance of keeping it in a neat and readable form for after reference; and of enriching it with as many circumstantial details as possible, and with sketches of objects which can be better described by the aid of the pencil than the pen, and he gives as examples of his method from recent pages from the log of the *Valetta*, one of the fastest clippers in the Peninsular and Oriental Company's service, which he commands; and which do equal credit to his spirit of observation, his orderly arrangement, and his graphic pencil. Captain Methven—referring to the congress recently held at Brussels, for the purpose of organising a system of meteorological observations, to be included in the logs of merchant vessels—is alive to the importance of the object desired, both in the interests of science and of the seaservice; but it is evident, from his remarks, that he considers the attainment of it out of the question in the great majority of cases, so long as the careless and comfortless arrangements in connection with the "Logslate," and log-keeping generally, continue unaltered.

But to return to the larger question which we pointed to in the opening sentence of this brief notice—namely the inefficient condition of the merchant service, and what is to be done to improve it. The Government appears to consider education as a sufficient panacea for the evil; and contemplates the formation of schools of navigation in our principal sea-port towns. We more than doubt, however, that the remedy does not go to the seat of the evil; indeed that it will treat the second cause instead of the first. Undoubtedly, the ignorance of the sailor-craft is lamentable, even in what relates to the ordinary routine of their duties; but will the establishment of schools alone, induce men to learn? Indeed where could be a better school than shipboard itself? Yet Captain Methven observes:—

> Every officer who has had an experience in shipping crews must have been startled with the difficulty he found to get men who could be entrusted with the duties of petty officers—such as boatswain's mates, or quartermasters, who have to undertake a class of duties in which the simplest education requires to be added to good seamanship; but reading or writing are not such very frequent accomplishments as to be a necessary condition for a boatswain's berth, for which good seamanship is not even always attainable. It might have been supposed that from among the crowds of seamen there would have been many pressing forward for such berths. But it is not so; few have courage to undertake them, so conscious are they of their deficiencies; and it often happens that the first officer, selecting one of his steadiest men, has to encourage him to undertake an advanced position, although it involves an increase of pay.

The secret of this distinclination, even on the part of men themselves pretty well qualified for the purpose, to undertake posts of control and responsibility, is doubtless to some extent attributable to their knowledge of the rough and unmanageable materials of which their fellows in the forecastle, with whom they have to deal, are composed; and the disorders and discomforts of the forecastle itself; and this leads directly to the conclusion that shipowners must improve the social condition of ship life before they can reasonably expect to attract to it men of superior *morale* or intelligence. Our author speaks strongly and feelingly upon this subject in a chapter from which we extract the following passage.

> Notwithstanding the competition of rates of freight and passage, much has been done to improve the accommodation of seamen by the good feeling of shipowners, and somewhat, though not as much as might be expected, by the clauses in the late law for the improvement of mercantile discipline. Nevertheless, it is important yet to make great amelioration in the accommodation provided for the labouring occupants of a merchant ship; for when it is considered that this is the home-life of men who have to do the brunt of the work, and that the home of the working-man should be a rest from his labour, the short periods which the sailor has below, should be both a relaxation and an enjoyment to him. The forecastle should, therefore, at least contain provision for a clean, dry bed, a comfortable, well set out meal, with space, light, and ventilation; and these, it will be candidly admitted, are in theory the minimum conditions for comfort. The crowding up of this space, as is generally the case, by filthy bunks, or still more filthy hammocks, occupied by discontented idleness, under the baneful system of watch and watch, makes it a place whence the fair sisters, Godliness and Cleanliness, have withdrawn shuddering.
>
> Some other points also he then proceeds to touch upon—as the "watch and watch" system, which he deprecates, contending that the watches below at night should be undisturbed, if possible; the "Sailors' Home," which he denounces as a satire upon the home of an Englishman; the importance of encouraging seamen to become domestic men, by establishing family ties at home, &c.; and he sums up the hopeless character of the present system by observing—
>
> There is no inducement, on the part of well-bred men, to enter the merchant-service, even as officers, for it involves a loss of caste, exposes them to battle with an imperfect discipline, and, after all, to receive inadequate pay for their duties and responsibilities; neither is there any inducement on the part of the labourer, for he is subjected to great discomforts and privations, separating him from those ties which make life valuable.

This puts the matter upon a broad, intelligible, and, we think, its true basis. Shipowners would do well to consider it, and whether a little increase of liberality in respect of the pay and accommodation of their crews might not prove to be a wise economy. To a certain extent, to use no higher argument, they might thus become their own insurers, by diminishing the risks of voyages; when the premiums demanded by underwriters would be proportionally reduced. To the merchant and the travelling community the gain would be beyond price.

In conclusion, we have to compliment the author upon the admirable pictorial illustrations, with which his pages are interspersed, and which have been well executed, in lithography, by Hanharts.

* The Log of a Merchant Officer; Viewed with reference to the Education of Young Officers and the Youth of the Merchant Service. By Robert Methven, Commander in the P. and O. Company, with an Editorial Preface, by Dr. Lyon Playfair. Folio. John Weale.

LITERATURE.

THE MICROSCOPE: its History, Construction, and Applications, &c. By JABEZ HOGG, M.R.C.S. Illustrated London Library. Milford House, Strand.

The object of this handsome volume, which is adorned with more than five hundred carefully executed and beautiful illustrations, is to give a popular explanation of the uses of a scientific instrument, hitherto understood only by the erudite, either in its principles, or in the results which it is made so wonderfully to subserve.

It was the remark, if we remember aright, of Buffon, that the infinity of littleness, so to speak, yielded not to the infinity of magnitude in the marvels which it unfolded, in the lessons which it preached, in the value of the discoveries and studies of which it furnished the field, or in the sublimity of the contemplations which it was capable of suggesting. And, in truth, to any man who closely considers this subject, it is questionable whether the minutest particle of organic matter does not afford the self-same intimations of the glory of the Creator—we do not say a part of the intimations, but absolutely the very same which are given by the firmament of Heaven. *Cœli enarrant* the heavens relate, just what is related in this respect by the acorn which has dropped from the branches of the oak. The perfect elementary form of the oak is detected by him who, with the aid of scientific instruments, examines the acorn; and in that seminal eidolon of the future tree, there is one thing which (in equally undeveloped form and proportion) is not omitted—that which is yet to be assimilated and nurtured into the future acorn itself. What, then, if we had instruments so perfect as to repeat on this last object the same scrutiny? Should we then see the shadows, or rather the perfect embryo tracery, of still minuter and less-developed arboral formations, and on them again the likenese of the same prolific fruit, in their inexhaustible progression of littleness? Truly, whatever illustration you please to take, only follow the investigation out to its full range of suggestiveness, and where sight and instruments fail, let the mind pursue the direction, according to the laws observed, while observation was possible to bodily organs; and it will be felt that the abyss of minuteness in the creation is as boundless, as bottomless, as unfathomable, as truly and as literally *infinite*, as those realms of astronomic space which have moved the adoration of all who could lift themselves to the august and awful survey. The creation, as a whole, appears without limits; but the marvel is that this image of eternity is found in each separate particle of the creation as complete as in the collection and the aggregate of all. Whether your mind ranges abroad through the open expanses, or descends into the cavity of one minute specimen of organic nature, an infinite journey stretches before it, an expedition of discovery which it will never complete.

But this is enough on the particular aspect in which we have chosen for a moment to view such studies: we dare not continue, or we should hardly know how to break away from the reflections which crowd upon us. There is a practical, every-day, common-place side to this question; and the microscope can be made the instrument of both useful and agreeable investigations, quite irrespectively of the more transcendental truths with which the thought of it is connected.

Mr. Jabez Hogg seeks, by means of his present work, "to bring the value and charm of microscopic studies home, so to speak, to the firesides of the people." His theme needs no adornments of style; so important a branch of experimental science as that which he undertakes to expound can afford to be treated plainly. A practical explanation and a practical account are allowable and suitable.

The first part of the work contains simply the history of the microscope, which instrument, he conjectures, was known, before the time of Christ, but in a rude form, and consisting of but one lens. After some remarks on the mechanical and optical principles involved in the construction of the instrument, directions are given for its use. We are next treated to a peep into the microscopic world, and, probably, this is the most interesting part of the work. From living things, which cannot be seen without the microscope, our author proceeds to objects which cannot be thoroughly seen without it; and much interesting information is given about insects, and about animal and vegetable structure.

Mr. Hogg avails himself very judiciously of the discoveries, opinions, and remarks of almost all who have signalised themselves in this department of instrumental science.

THE RAILWAY MUSIC-BOOK: A New and Simple System of Music, adapted expressly for Self-tuition. By Mrs. JOSEPH KIRKMAN.

Though there is no "royal road" to music, nor indeed, to any other art or science, yet the ordinary roads to most arts and sciences are much more tedious and rugged than is at all necessary; and this is especially the case with such of them as furnish a livelihood to a great professional body. Musicians, and teachers of music, have no interest in shortening to others the road which they have travelled themselves. It is obvious, indeed, that the very reverse is naturally the case; and it is hardly to be expected that they will look with friendly eyes on anything which may interfere with their own occupation and emoluments. It can only be for this reason that Mrs. Kirkman's ingenious and useful works of construction, though well known to the musical world, and admirably calculated to simplify and abridge the labours of the teacher, have not been adopted by the musical profession.

The "Railway Music-book," the last of Mrs. Kirkman's publications, is, as she states, expressly adapted for self-tuition. Now, a proficiency in music cannot be gained by self tuition; nor, indeed, can even a beginning be made without some assistance. A teacher must show the learner how to emit the voice properly in singing even a scale, and to place the fingers on the keys of the pianoforte. But there are many things which learners, with the help of intelligent written instructions, may teach themselves; and these are the things which form the substance of the "Railway Music-book:" so much, indeed, as the sense of the easy and rapid progress to be made in music by its means. Its form is that of a sort of map or chart, printed on a large sheet of strong paper, folded, and enclosed for preservation in a pasteboard cover. It presents to the eye a view of the musical scale as represented by the white and black keys of the pianoforte, and showing how the one set of keys forms the *natural* scale, while the other set raises or depresses the natural sounds, by making them sharp or flat. It exhibits the circle of major and minor keys, showing the order of their succession, and their relations to each other. It explains all the varieties of time, or measure, and all the signs and characters used in the notation of music. And lastly, it gives a series of exercises for practice, whereby the learner will acquire a correct method of fingering in every key. It teaches, in short, the elements of musical knowledge, in a manner so concise, clear, and simple, as to be perfectly intelligible to every young person of ordinary capacity, and we therefore recommend it to the attention of mothers of families, and of all who are engaged in the education of youth.

LONDON IN 1854. By PETER CUNNINGHAM, F.S.A. Murray.

The requirements of the stranger in London have increased year by year, with the great town itself, until the visitor becomes almost as perplexed as the native in the curious web of the multitudinous wealth around him. The services of a "well-informed guide," who directs the inquirer to the objects most worthy of his curiosity, must lead to the economy of time and enjoyment; and no guide-book of the present day possesses these recommendations in so high a degree as the volume before us. The introductory chapter of Hints and Suggestions, extending to some fifty pages, contains a vast amount of condensed information, especially adapted for persons of taste, upon objects and collections of art and virtu best worth seeing, and how they are to be seen. The meaner things, and more substantial delights, are likewise provided for; and where to find a good dinner is cared for equally with a visit to a priceless picture. The arrangement of the book is the most tangible that could be devised; it is straightforward, direct, and instant—just what is wanted, and no more. This is the third edition, and has been corrected to the present moment.

THE HAUNTED GARDEN.

"GOD bless the Marquis of Saluzzo!" exclaimed an old soldier, as he emerged from the Col de Viso. He was descending towards the city of Saluzzo as fast as was possible, under the weight of a heavy peasant's blouse, a heavy cavalry sword bulging out under it, a heavy knapsack, very heavy boots, and one of those heavy cocked hats which the Piedmontese still persist in wearing.

The young man whom he had overtaken, and to whom he addressed these abrupt words, walked on silently. He either did not wish for any company, or did not like that of the rough wayfarer who had got abreast of him. But there was no escape.

"I say again," repeated the old man, "God bless the Marquis of Saluzzo!"

"Well; say it," answered the youth, gruffly; "I don't hinder you Though I don't see the use of wasting prayers upon a beggarly Marquis."

"Beggarly! Didn't he cut the wonderful road across the Alps, that shortens my march from Lucerna—and, for the matter of that, yours, too?"

"*I* don't come from Lucerna," was the sulky answer.

"Well, wherever you do come from, you ought to be thankful to the old nobleman, who, in past times, cut such a capital road."

"I have other things to think about," returned the gloomy young man. "Besides, if you have any prayers to spare, offer them up for our beloved exile, Charles Albert, whom God preserve!"

"Take care," said the old soldier, looking round cautiously; "mind what you're talking about. Who knows?—that wayside cross, that rest-and-be-thankful, that boulder, may be ambuscades. *You* may be a white-livered Austrian spy for aught I know."

"Don't provoke me, old fellow!"

"Not I." The old man stopped to look fixedly at his new friend. "I don't care a pinch of gunpowder what you are, but if you're an honest man—there! take it!" He thrust out his hand. The young man grasped it. "If you *are* a spy, denounce me as soon as you get into the town—for here goes plump into your trap (if you are setting one)—may God, in his mercy, preserve our dear master Charles Albert, in his cheerless exile!" They both stood in the road, right hand in right hand; and, lifting their hats, jointly offered up a fervent prayer to heaven. Alas, history (if events of yesterday may be deemed history) attests that their prayer was not heard.

There were no more reserves after this, especially when the young peasant showed under his frock part of an infantry uniform. The older pedestrian never kept secrets, and was very fond of talking. Like most individuals of his class, his own affairs formed the staple of his talk; because, what interested him was pleasing, he thought, to his listeners.

"As for me," he began, "I was born, to the best of my belief, at Turin; though as both my parents were in the army (my mother was a vivandière), I cannot be sure of my birthplace to within a hundred miles. I was bred with a sword in my hands, and was hardly able to toddle, when they clapped me on horseback. That's a few years ago; yet, I may say, I've only just dismounted."

"On the retired list, I suppose," said the youth.

"Right," replied the veteran, flourishing his walking-stick like a drum-major on parade. He added, "our Royal master, Charles Albert, God bless him, requited me also with the highest rank it is possible to attain."

"Indeed!" The younger pedestrian looked at the humble attire and heavy knapsack of his companion with some surprise.

"You seem astonished, young man; but know that in me you behold an ex-troop full sergeant-major of the King of Sardinia's Second Dragoon Guards. Don't be diffident, for though you are only a private, I am not prand."

Being now put at his ease, the youth joined more freely in the conversation. He narrated, in turn, his private history. His native village lay on the other side of the Alps; and, after the rising at Milan he had taken up arms with the rest. "Alas!" he continued, "in vain; the Austrians beat us at Novarra. Our independence is, for awhile, destroyed; and our King is a miserable exile. I shall never bear to see my home again."

"Then do you not intend to return to it?"

"Never. The city of Saluzzo is my adopted abiding place: I mean to die there."

The dragoon-sergeant looked towards his companion, and saw that he covered his eyes with his sleeve as if to hide tears. "Halt!" he exclaimed, "what's this? a soldier, and snivelling? But I forgot, perhaps you can't help it; for now I look again at your colours, you are only a *Provinciale*—a mere militiaman."

"I cannot help it," replied the stranger, "and would not help it if I could. It is not for myself, but for others, that I feel. If you had had everybody you cared for dragged away from you, besides being yourself beggared, perhaps you would find a tear in your eye, Monsieur ex-troop sergeant-major."

Perhaps I should," returned the old trooper, burning priming in

an old pocket pistol to light his pipe. "I have had my troubles too. By-the-by, whereabouts on the other side of the Alps were you born?"

"At Bagnolo. My father was a farmer. He died when I was ten years old. Two years after, my mother was taken from me, and I became destitute; but I hired myself to a neighbouring proprietor, who proved to be better and kinder to me than a father. He had a sister: she taught me to read. You know," continued the narrator, "that we of the other side frequently cross the Alps to purchase milk from the people of Saluzzo. On these occasions I found that I made the best bargains and got the best milk from a maiden who lived near the city. After we had met three or four times, we agreed to correspond, for she had taught herself to write."

The sergeant-major sucked in a prodigious whiff of smoke, "Ah, a love-story; is there much more of it?"

"No more at present. Pestilence came, and then war."

"Ah, those cursed Austrians! I know they brought the cholera amongst us," said the veteran, furiously knocking off the heads of a dozen hairy rose-bushes that grew by the wayside.

"Worse than cholera. A dreadful disease, which scarred the face, and made its victims too hideous to behold. The dregs of it still remain; and the sanitary police, established when it first appeared, is still in existence. The moment people are seized, they are hurried off to a sort of dungeon hospital, and are never heard of more."

Here the listener yawned, "Of course, you are going to tell me that the next time you went to fetch milk your lovely dairymaid had vanished, and——"

"No, no. I had to take a load of cheese to Turin. It took me a week. On returning through Saluzzo I met her, and a blissful meeting it was. I was returning with my milk, thinking——"

"Love and milk," murmured the veteran: "how very tender!"

"Thinking what constant employment our cheese-presses would have; when, on reaching home, I found the doors blockaded. The Government seal was upon them. I fled to the neighbours to learn the cause; but they were as much astonished as myself. All they knew was, that, the night before, a party of the sanitary police had arrived—that they went straight to my benefactor's house, and took away both himself and his sister. All their property was seized——"

"And," interrupted the old sergeant-major, grinding his teeth, "of course confiscated. Oh, those Austrians!"

"You are right. Again I was destitute—doubly destitute, for the people of Bagnolo shunned me, as having lived in an infected house. The mystery which overhung my master, moreover, stigmatised me. I fled, and naturally turned my steps towards one whose plighted troth I held, and——"

"The milk curdled, of course. She sent you to the right about, like the rest of 'em, eh?"

"Yes," answered the lover sorrowfully, "at least they told me as much, and I believed them. I enlisted as a *remplaçant*, and fought in all Charles Albert's battles. Months of anguish have convinced me that her crime still remains to be proved. It is the hope of finding her guiltless that brings me to Saluzzo."

"Poor fellow," exclaimed the sergeant, obscuring his head in a cloud of smoke, "I pity you; I know the sex; and, mark my words—well, never mind, here we are in sight of the city; another step, and——"

The speaker stopped; for, as he spoke, a turn of the hill laid open before them one of the most beautiful views that even this picturesque country affords. Beneath them lay the valley through which the river Po and its tributaries thread their silvery way. Saluzzo itself, with its antique ruins and fine cathedral, glistened in the beams of a brilliant sun. The coldest heart could not view such a scene without emotion. The old sergeant's pipe fell from his lips, and he stood, gazing on the scene, making mighty efforts at composure; but, in spite of them, he covered his face with his hard sunburnt hands and wept. His companion—more with a desire to say something cheering than to wound him—retorted: "What! a soldier, and snivelling? Come, my regular, that's only allowed in the militia."

"Well," replied the veteran, dashing off his tears with a desperate laugh, "I don't like you the worse for your joke. I allow it is childish to weep; but let me ask you one question—had you ever a daughter? Of course not; for you only just show the beginnings of a beard. Well, suppose you *had* a daughter born in one hour, for the wife of a twelvemonth to die the next. Suppose that for a time your daughter had been the most affectionate of children. Suppose that, to cheer the heart of her father in absence, she had taught herself to write. Suppose that, suddenly, she forgot the old man; that she ceased to write; that all his inquiries about her were fruitless, or were answered indirectly by suspicions. Suppose yourself on the eve of meeting her after an absence of several years, and of seeing her, perhaps, a dishonoured outcast." The old man could not forbear, and wept again. His companion did all he could to soothe him; for a strong feeling of sympathy had sprung up. It seemed as if their respective errands to Saluzzo were akin. Both had been disappointed—both deceived.

As they trumped along they conversed on different subjects, as if to check the emotions to which their respective thoughts gave rise. "Ah!" commenced the younger man, "we both think our fate hard; but what is it to that of the poor wretches confined in the old castle

by courtesy called an hospital?" As he spoke, he pointed to a sombre castellated ruin which rose above the southern outskirts of the city.

"Are there many in it?" asked the sergeant.

"There were only two when I last left Saluzzo," replied his companion. "Nobody can find out who they were. The police forbade any person going even within the garden, for fear of infection; and the names of all the inmates are kept secret, out of regard to their relatives. The place where they are penned up is that part of the castle that abuts upon an old Roman wall which formerly surrounded the city. At least, that's what my master told me one day, as we were coming to market. It is built of the marble with which the ancient fortification was faced. People call it the "Goblin's Keep," because it was, even within my recollection, haunted."

"Then the ghosts have marched off. Who gave them the route?" asked the sergeant-major, with mock interest.

"The bishop," was the answer. "He exorcised them, to make room for the victims of the horrible disease."

By this time they were crossing the bridge that spans the Po, not far from the city. When they reached Saluzzo, they stopped at the nearest inn; and, seated themselves at the door, under the arch of vines trained across the road—a shady arrangement very general in that part of the country.

Having dined, it was agreed that they should make inquiries of the landlord regarding the persons whom they sought. When that individual appeared, his aspect did not prepossess his guests in his favour.

"Landlord," began the old soldier, "as you are, I perceive, the postmaster of this good city, you must know every man, woman, and child in the place."

The host replied, in a half-surly, half-civil tone, that he believed he did know every soul in the neighbourhood—except the strangers and the scamps.

"Then," rejoined his guest hurriedly, lest his courage should fail him in the midst of his inquiry, "you must know Anzel Costa?"

"Anzel Costa!" repeated both the innkeeper and the younger guest together.

"Well," continued the former with a tinge of bravado, concealing a rising embarrassment, "what if I do know Anzel Costa?"

By this time the *Provinciale* had risen, and was once more grasping the hand of his travelling companion, "You, then, my good old man, are her father. It is Anzel Costa whom I love."

A scowl passed over the landlord's face; but the speaker did not notice it. "It is for her," he continued, "that I have journeyed so many weary miles to set up my rest in this city. For whether she be innocent or guilty, Saluzzo shall be either my home or," he added, lowering his tone, "my grave."

Old Costa jumped up from his seat in an ecstasy; then, prudently checking himself lest he should be too rash in accepting an utter stranger as a kinsman, he placed his hand at arm's-length upon the lover's head, eyed him from top to toe, as if to take measure of him for a grenadier; and satisfied himself that he could conscientiously "pass" him as a thorough soldier and an efficient son-in-law. Laughing and weeping by turns, he shook him heartily by the hand, remarking that the girl would now be doubly dear to him, for having chosen such a straightforward and perfectly "set up" soldier. "But," he added, his little dash of merriment melting away into a sigh, "supposing that our faint suspicions should be strengthened, and that she prove unworthy of you?"

"It is not wise to fear the worst," replied the other.

"Right, comrade, therefore attention, *Trinquons!* Fill out, landlord! You must join us. Let us drink to the success of our inquiries; and a good husband to Anzel Costa."

"Of course," said the host, arresting the drinking-horn half-way to his lips; "only if she deserve him."

None of the wine was tasted. Costa asked roughly, "Do you know anything to the contrary?"

"What I do know about the girl Costa," he replied, "is nothing to her credit. However, I am not going to turn informer. If you want to know particulars, inquire of the police; for she is under their surveillance." With these words, the man went into the house, leaving the full goblet on the table.

The strangers sat for several minutes as if stupified with grief and disappointment. "It is then true!" exclaimed Costa, at length.

"At least," replied the lover, Martin Brandt, quickly, "before we give way to despair, let us seek further. I do not like the look of that fellow: he seemed to shun us the moment he knew for whom we are in search. I will hasten to the police-office, and learn the worst at once."

Martin strode hastily away towards the Prefecture; which he soon found out. Interrogating an inspector of police, in the hard tones of suppressed emotion, he watched for an answer, trembling like a culprit awaiting sentence. The cool deliberation of the officer (an Austrian) aggravated his agonies. Without speaking, that worthy functionary did not lay down his pipe until he had carefully applied the tobacco-stopper, to prevent it going out. He then slowly pulled down a huge index from a shelf, and laid it on a desk. "Was Costa the name? Ah! Costa! So. That must be letter C." The leaves were turned over one by one. Letter A and letter B contained so many entries, that the fatigued official was obliged to have recourse

to his pipe before he could encounter letter C. "Well. Letter C. Here begins letter C. So. C—o—s, Cos." The official finger slid slowly down the paper, Martin Brandt following it with eager eye, and lips quivering with expectation. Presently the dreadful digit stopped: Brandt held his breath. "Christian name?" asked the policeman.

"Anzel," answered the lover, now almost choked with suspense.

"Wrong!" exclaimed the officer; and took a few more whiffs before his lazy finger continued to track its way to the bottom of the page. "So," he said, "Anzel—at last. Ah, Anzel Costa! See Offence-book, No. 9, page nineteen ten. Here, lend a hand," he added to Brandt, as he moved to another shelf. "This is the heaviest book in the bureau. It is two mens' work to lift it."

"So, nineteen ten. Here she is!" said the sluggish functionary at length, as he obscured the page with smoke.

"Let me know the worst without more delay," exclaimed Brandt.

"Don't be in a hurry—for, first of all, ten centissimi, if you please. Fees in advance is our rule."

Martin paid the money, and then heard his doom read in syllables long drawn out:—"September 26th, 1848, Anzel Costa, suspected of treasonable correspondence with a soldier. Sentenced to three years' surveillance. December 24, 1848, confined in the town jail, for habitually breaking the sanitary laws of the State in reference to infectious diseases." The man shut the book, and turned away into an inner room to enjoy the rest of his pipe in peace.

Martin returned to the inn a prey to the bitterest thoughts. Perhaps he told his news too abruptly, for, on hearing it, the old soldier became almost frantic. Bred from childhood amidst scenes of strife, he had never known the consolations of religion, nor how to exercise those influences of self-control which lessen disappointment and check the violence of passion. The imprecations he uttered, not only against his daughter, but upon that destiny which had denied him death in battle, terrified even the hardened landlord. He raved like a madman. "Is it for this day," he exclaimed, "that I have hoped and striven? Have I fought and bled for her, to find her a traitress?"

Brandt had great difficulty restrain him. When, however, he had sufficiently recovered, he determined to go at once to the suspected place in which the girl was said to live. He would wreak a full measure of revenge upon her. "At least," he exclaimed, "I can die—how it matters not?" A terrible resolution which he had formed was no mere outburst of passion. Had there been an opportunity, he would have fulfilled it. Yet the old man—a compound of levity and impulse, in whom the fiercest passions were easily roused—had induced Saluzzo, with the hope of settling down in easy contented retirement.

Brandt, dreading his intention of wreaking a sudden vengeance upon his daughter, could he find her, held him, to prevent his escape. Costa, however, strong in his rage, broke away, and ran towards the Turin road. Passion seemed to give the old soldier nerve, and he sped so fast that it was a long time before Martin was able to overtake him. Having passed the ruins of the Castle, the young pursuer came up with him opposite the Goblin's Keep. At this place Costa, completely exhausted, fell, and, on reaching him, Brandt found him in a state of insensibility. A gate in the wall stood partly open. Looking in, he beheld a lovely garden. He entered, and laid the exhausted old sergeant on a rustic seat, while he returned to the town for assistance.

When he recovered his senses Costa thought he had been dreaming. He beheld before him a beautiful garden. He looked up at the ruined castle, and remembered that opposite to it he fell. The scene was so enchanting, so tranquil, that it calmed and soothed him. He tried to rise, but his strength was gone. He rubbed his eyes. Was it a vision? Had he suddenly passed away into regions of love and beatitude? For the first time for years he muttered a prayer.

In the midst of a reverie, his eye suddenly caught the figure of a man

whose face was concealed by a huge slouched hat, leaning against a tree, with his hands crossed, in devout contemplation.

"Away, away!" said the man, in a tone, not of anger, but the deepest sorrow, "I am a leper."

"And I am an old soldier," continued Costa. "Why should I shun you?"

"Because the law decrees imprisonment to whoever is found here; so great is the dread of infection."

"I love misery, and those who are miserable," said the soldier, "for I am a wretched old man myself. Besides, though longing to fulfil a wretched errand, I am exhausted. Let me then rest here a little longer."

"You are welcome," said the leper, "for it is seldom I hear the sound of human voice. Human sympathy has long been denied me. But I again warn you that, should you be discovered, you will yourself be made to suffer imprisonment, as one infected."*

Nothing daunted, however, the soldier solicited permission, when fully recruited, to remain, and to explore, not only the garden, but the far famed Goblin's Ruin. The deep melancholy and resignation of the leper, the quiet beauty of the garden, had worked powerfully on the soldier's mind. For the time, he forgot his daughter, and his own troubles concerning her.

When Costa was able to rise, the leper, disposing his ample slouched hat so as to completely hide his features, carefully fastened the gate.

"Pass on," he exclaimed. "Examine my flowers. Some of them are rare. Gather such as you may deem worthy of acceptance."

Although Costa felt the deepest pity for the leper in his cheerless solitude, yet the melancholy tones of his voice and his gentle manners inspired the rough old campaigner with a respect for the calm contentment in which he appeared to live. "I," thought the old man, "am now equally solitary. There is no being whom I have to live for. Would I could feel as this leper feels." The unfortunate being looked on Costa with pleasure as he plucked the flowers, for he seemed to read his thoughts.

"You love flowers?" he asked.

"I love them now," was the reply; "for I see how much they must relieve the lonesomeness of solitude. A great many must die."

"The brightest," answered the leper, "are gathered every morning."

"By whom?" asked Costa, wondering.

The leper checked himself, hesitated, and turned away.

"So," thought the old soldier, "he has a secret. Perhaps, after all he is not left entirely alone. Some one comes to console him."

"Occasionally," said the leper, returning, "children from the town play under the wall, and some of them, though strictly forbidden by the police, now and then climb over, and steal my flowers. I watch them from the window. When they know I am there, they look up; and, on going away, hold up in playful triumph the nosegays they have taken, crying 'Good-bye, leper!' Oh, how I love to see them!"

"Are they your only visitors?" inquired Costa.

Again the leper seemed confused, and changed the subject; asking the sergeant if he were afraid to inspect the interior of the dwelling?"

"What," thought Costa, abstractedly, "are my misfortunes compared with those of this poor wretch."

In truth, the afflicted man seemed comparatively happy, while the old sergeant was a prey to the deepest affliction, and but a few hours before contemplated suicide.

Anxious to know how the recluse had attained such a state of tranquil contentment, Costa, on entering his cell, inquired what train of events had brought him into the castle. "Is it," he asked, "your birthplace?"

"I lost my parents in childhood," he was answered. "Being comparatively wealthy, they left me a small patrimony, and I left the church, for which I had been training myself, to cultivate it; but they also bequeathed a constitution which rendered me an early prey to the terrible epidemic lately brought amongst us. My sister was the only friend I ever had. Yet no." He checked himself, "I have one other."

"A visitor or an inmate?" inquired the soldier.

The leper evaded the question. "When," he continued, "the malady with which you see me afflicted made its appearance both in my sister and myself, the sanitary police hurried us away to this habitation."

"Your sister, then—"

"Is dead!"

"Another deep affliction," thought Costa, "yet how patiently he bears it."—"You must," he said aloud, "find the solitude very irksome?"

"The feeling of solitude is tempered by labour. In the summer season the cultivation of my garden occupies me pleasantly, and almost entirely. In winter I make baskets and mats, and my own clothes. Books and prayer fill up the hours I am not thus employed. Indeed, so far from time hanging heavily, when the year has passed it seems to have been very short."

"Were you always so resigned and contented as you now appear to be?" inquired the guest.

"Far from it," replied the leper, "I will not deceive you. I have not arrived at my present state of content without strong mental contests. Neither is a complete sacrifice of all human affections yet accomplished. Even now I have struggles which the power of religion is not yet able to overcome. My imagination sometimes carries me back to the world which I have left, and fills me with chimerical desires. I ascend the castle watch-tower, and view the magnificent spectacle of mountain and valley. I see the glaciers of Stroppo; I behold the forests on the sides of the mountains, and long to wander through them. I perceive the rich fields spread below, and human beings gambolling in them, or strolling along in quiet happiness. Some of them I picture as lovers, or married people, whom health, youth, and fortune unite to load with blessings. I envy their lot in proportion as my own is miserable. I feel the confused sensation of an immensity of felicity, the reality of which is denied to me. Once, towards sunset, a young couple who had been but a short while married, made their appearance close under the walls of my garden. Happiness, unalloyed and pure, was stamped on their features, and they walked slowly with their arms entwined. Suddenly they stopped, the young wife leant her head on her husband's shoulder, and he clasped her in his arms with fervent ardour. My heart was ready to burst—I strained my vision after them to the end of the meadow—and was losing sight of them among the trees, when shouts of gladness arose. Their relations had come to meet them, and they were surrounded by old men, women, and children. I heard their confused murmurings of joy, and saw their gay dresses between the trees. The whole group seemed to breathe an atmosphere of happiness. I could not bear the sight—the contrast was too great. The Creator, I cried, has distributed pleasure every where—he has sent it in torrents upon everything that breathes!" I went up into the tower, and looked down upon the city and its busy and cheerful people—I stretched forth my hands, and, groaning, demanded from them my portion of happiness. In my wild transport, I descended again to my garden, and clasped the trees in my arms, praying the Almighty to put life into them, and to give me a friend."

"Can nothing be done to restore you to your place in the world—Is there no cure for your disease?" Costa asked.

"No cure now. I am doomed. My sentence is for life—my only remedy is in the grave. See!" The leper removed his overshadowing hat, and turned his face towards the soldier. The disfigurement which the leprosy had wrought was greater than Costa was prepared for. "Who, think you, would willingly be the companion of such a hideous form as mine?" asked the sufferer. "It is the duty of my fellow-creatures to shun me."

"I, it appears, am not shaken by seeing you. Are there not others like me?" inquired Costa.

The leper paused for a moment, and then replied, "I do frankly confess, there is *one* who sometimes visits me at the risk of liberty—even of reputation."

"Who?" the soldier asked eagerly.

"That is my secret," the recluse answered coldly.

"Forgive, if I have offended!" With these words the old man made an involuntary movement, as if he would have taken the outcast's hand. He drew it back quickly, exclaiming, "Imprudent man, would you touch me?"

"Yes; and would press your hand as that of a friend and comrade."

"Such happiness is denied me," exclaimed the prisoner, with emotion.

"You said you had a sister; did she never press your hand?"

"Alas! she formed the last link between me and humanity. It pleased Heaven to sever it, and to leave me the isolated, unconsoled being you see me. We lived almost always separated. We avoided looking at each other, lest the sight of our deformity might be too shocking for us to bear. But we prayed together, each in our separate solitude."

"Her loss must have left you lonely indeed."

"It was the example of my dying sister that conquered all turbulent and disquieting thoughts."

The rough old soldier tried to utter some hearty words of sympathy and consolation.

After a moment's pause, the leper rose: "Stranger, when I first beheld you in my garden, grief or some mightier passion had overcome you. Whenever it threatens to master you again, think of the leper."

Costa felt that a Providence had directed him to this man of many sufferings. He rose to depart, having asked permission to return on the morrow, to tell him all his griefs. The leper, cautioning him of the risk he ran, consented.

Before he left the castle, the moon shone brightly, and the Solitary, fearful that Costa's exit would be observed, went first. A low murmuring sound proceeded from the road. Alarmed, he motioned his guest to be still. The old sergeant retired a few steps; by which means he got a view of the ruined garden, which had formerly belonged to the leper's sister: to his surprise he beheld a figure crouching behind the trellis-work partition, as if to avoid observation. It was that of a female. The leper who had also drawn back, trembled visibly. He murmured loud enough for Costa to hear, "Imprudent girl!"

"Leper, stand back," cried a harsh voice suddenly at the gate. A gendarme appeared, the bright barrel of his firelock, pointing at the person he addressed, gleamed in the moonbeams. The leper retired to his hut, at the window of which he instantly presented himself. Under the direction of his chief, who had now entered the garden, another police officer went cautiously to the opposite side of the trellis; and, presenting his musket, cried, "Stand, woman! Attempt to escape and I must fire." The person thus spoken to burst into tears.

"Spare her, spare her!" cried the leper, from his window. "It is true," he continued, addressing the Lieutenant, "that she has broken the sanitary regulations of the State by visiting me. But this she has done since my dear sister's death, without either taking or communicating the infection. She sells my flowers to procure me comforts that I should otherwise be without."

"So," said the officer, "this explains the mystery. This accounts for her living in so suspicious a manner, in the ruined hut a mile hence. Though under surveillance, she eluded our vigilance till this moment. Now, however, our duty is imperative."

While these words were being uttered, old Costa discovered that the girl was his own child!

His heart, so lately turned against her, was now touched; and he exclaimed, "My dear daughter!" running forward to embrace her The soldier, however, levelled his piece, exclaiming, "Touch her at your peril. She may be infected!" Costa, yearning to take his daughter to his arms, was obliged to retreat.

The Lieutenant ordered the girl to retire. Such was the dread of infection, that no actual arrest took place; but the police-soldiers kept their pieces levelled at the girl and her father as they slowly retired from the garden. The gensdarme had not thus driven their prisoners far before them before the Lieutenant was again obliged to interfere. Another person came up, and had nearly come into forbidden contact with the girl. Martin Brandt would have folded her in his arms. Repulsed at the point of the bayonet, however, he stood like one transfixed, his face turned towards the castle. The moon was shining full upon it when the voice of the leper, from the window of his hut, was heard—"In the name of Heaven, young man, tell me your name!" he exclaimed.

"Martin Brandt," was the reply.

"Heaven be praised!" ejaculated the leper; and nothing was audible for some moments but his sobs.

"My dear master," exclaimed Martin. "You, then, are the dreaded leper? But Mademoiselle, your sister——"

"Hush!" whispered Costa.

The momentary interruption which the appearance of Brandt had caused, now ceased, and the officer gave the word "Forward!" The father and daughter were driven towards a carriage, painted yellow; they were made to enter it, each occupying a separate compartment, and were driven off.

The innkeeper had been watching under the garden wall. He could conceal his exultation no longer. "Ha, ha!" he said, "I dare say she would be glad to be an innkeeper's wife now."

These words gave to Martin a clue to Anzel's misfortunes. The fellow, being a rejected suitor, had possibly originated the suspicions concerning Anzel, and had caused the misfortunes occasioned by them. Meanwhile, the prisoners were conveyed to the Intendant's house. Having heard the statement of the police, and looked into the carriage to see if the occupants were really the persons described, that functionary signed a warrant for their detention. Upon this, Costa and his daughter were conveyed back to a part of the castle at a distance from that occupied by the leper.

The day after, there was a great bustle in the town of Saluzzo. News went about that, early in the morning, Hans Duppa, the innkeeper and postmaster, had been arrested, and that in his house documents had been found which afforded grounds for a charge against him. His accuser was Martin Brandt. The examination before the Intendant cleared up the mystery which overhung the character of Anzel Costa, and which had caused so much grief and doubt to her father and lover.

It appeared that when Martin and Anzel first met, she was in the service of the innkeeper as dairy-maid, and that, rejecting his suit, she left his service. He vowed vengeance, and took a wicked mode of satisfying it. As postmaster, he not only suppressed all the letters which came, either from or for Anzel Costa, but made use of one of them to accuse her of corresponding with a soldier of the enemy—which he represented Martin to be—during the Austrian occupation. In course of time Anzel gave new ground for suspicion by her secret but benevolent visits to the leper, whose flowers she arranged, and regularly sold for his benefit. She supported herself by selling milk for anyone who would employ her, at the seasons when the people from the mountains came to buy it or their cheese. Concealed in the inn were found two letters, which Anzel had written to her father, and which were quite sufficient to convict Hans Duppa of letter-stealing.

After this, the Intendant—a benevolent man—interested himself in favour of Costa and his daughter. All fear of infection having subsided, the sanitary laws were relaxed; and the prisoners, having been certified free of infection by the physicians of the district, were liberated, and Anzel was allowed to continue her ministrations to the leper.

The Intendant did even more: he gave to Martin Brandt the office of postmaster, vacated by the treacherous innkeeper; and, in due time, the lovers were married. Costa ended his hitherto turbulent life in peace; and never allowed a night to pass without a visit to, and a prayer for, the leper; who, years afterwards, expired tranquilly and happily in Anzel's presence.

* The existence of a leper at so modern a period as the date at which this story is laid may require a word or two of explanation. The Count Xavier de Maistre wrote at the beginning of the present century concerning a person similarly afflicted, and confined in a lazar house at Aosta. The Government provided him with such requisites as his unhappy condition admitted of, the hospital of St. Maurice being appointed to see to his maintenance. He was supplied with some furniture, and implements necessary to cultivate his garden. Until the present century a lazar house was established in or near every town both in Europe and Asia, for the separation from the rest of mankind, of persons afflicted with leprosy—a term which appears to have been used to express and loathsome affection of the skin. These numerous cutaneous diseases have been divided by modern physicians, and variously designated, but that which appears to have prevailed under the name of leprosy is now called elephantiasis. So wide were its ravages, that, in the year 1226 there were in France 2000 lepers, and the ritual of the church in that kingdom retained, until very recently, the forms which were used in separating the leper from his fellow creatures. The tainted wretch was carried to the altar, and clothed in a funeral pall; mass was sung as for the dead; he was conveyed to the hospital, invested with the garb of the lazar, and furnished with the *cliquettes* or clapper, which he was to sound when any one came near to him; the priest then solemnly interdicted him from all intercourse with the people, exhorted him to patience, and, after having cast a little earth on his head, closed upon him the grave of the dreary mansion. The disease appears to have prevailed in Scotland, about the beginning of the thirteenth century. Its victims in Edinburgh were banished to Inchkeith, a small island in the Firth of Forth, opposite Leith. The following notice of a receptacle for lepers in Aberdeen, occurs in a manuscript of Sir James Gordon—"Such as goe out at the Gallowgate-port, towards Old Aberdeen, half way almost, may see the place wher of old stood the Leper's Hospital, called the Seich hous, hard by the way side, to which ther was a chapell adjoyned dedicated to St. Anne, who was accounted patroness of the lepers." The diseases which the general term was supposed to include have ceased to commit the ravages of former years; but in some of the secluded and ill-aired valleys of the Alps, they have not entirely disappeared—a fact which the subject of this sketch exemplifies.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

SMOKE PREVENTION.

The Earl of ABERDEEN, in reply to an inquiry from Lord Redesdale, said, the Secretary of State for the Home Department had instructed the Commissioners of the Metropolitan Police to give notice to all owners of furnaces, of which there were 3862 within their district, that the Smoke Prevention Act would come into operation on the 1st of August next, and that its provisions would be enforced.

THE GERMAN CABINETS AND THE WAR.

Lord LYNDHURST drew attention to the terms of the memorandum, relating to the Eastern question, transmitted by the Cabinet of Vienna and Berlin to their Envoys at the Diet of Frankfort. It had given rise to much discussion, and it had been read with anxiety and uneasiness. It was somewhat obscure in language, but he apprehended it to mean that after the war the territorial position of Turkey on one side, and Russia on the other, should remain as before. The protocol of the 5th September, which referred to this memorandum, meant, placed this beyond doubt, for it was to the same effect. So that, according to the agreement between the four Powers, no alteration in the territorial limits of Turkey on the one side, and Russia on the other, was to take place, whatever might be the result of the war. This protocol was agreed to before the declaration of war; but, after war had been declared against Russia by England and France, we conformed to the principles upon which the protocol of the 5th of September had been framed. It was, therefore, extremely difficult, under these circumstances, to say by what principles England, France, Austria, and Prussia were guided; but it appeared to him clear to demonstration that at this very moment they were acting upon this principle, that if Russia guaranteed the integrity of the Ottoman empire, and the independence of the Sultan, the war with Russia must be terminated with the *status quo ante bellum*. Describing the importance of the Danube to Austria and Central Europe, and the circumstances under which, by the treaty of Adrianople, which he characterised as unfortunate and disastrous, the core of the mouths of that river had been given to Russia, he contended that the mode in which this engagement had been neglected by Russia, in order to encourage the port of Odessa, rendered it impossible for the Powers to consent to place that power in her former territorial position. This was absolutely necessary, from the state of this great river, that a change should be made in this respect. If this was the case on the western coast of the Black Sea, the duty was stronger on the coasts of Circassia. Amidst cheers from many noble Lords, he asked the House whether it was possible for this country to consent to restore to Russia the territory she had lost, or might lose, in Circassia? It might be said that, if certain guarantees were given for the integrity of Turkey, we might easily return to the *status quo*. The guarantee of the Four Powers, he admitted, might be of great value so long as they were united, and no collision occurred between them upon other points; but could that be depended upon? Then, if he was told we should have the positive engagement of Russia not to infringe upon the independence or territory of Turkey; but any guarantee of Russia, after what had occurred, was perfectly valueless. It was not worth the paper upon which it was written. The history of Russia was a history of fraud, duplicity, trickery, and violence. It had been such as ought to put us upon our guard against placing the slightest reliance upon any of her assurances. A new phrase had been introduced into the language of diplomacy by Russia—"material guarantees." If she would give the Allied Powers a material guarantee, a pledge of something so valuable that she would not like to risk its loss, perhaps it might be accepted; but as to a moral guarantee, the pledge of her honour, it was perfectly worthless. Under all circumstances we could never assent to restore the basis of the *status quo ante*. We must only, at the close of the war, diminish her means of aggression. But these objects would never be attained, and Turkey would never be safe, until the fleet in the Black Sea had been destroyed, and Sebastopol taken.

The Earl of CLARENDON, after some complaints of the irregularity of discussing a document not under the cognisance of their Lordships, said, the memorandum alluded to had exclusive reference to German interests and that it did not touch any engagement which had since have been made by Austria and Prussia with England and France. On the contrary, it strengthened them. He could not, of course, undertake to say upon what terms peace might be made. But the Allied Powers knew that the policy of Russia were dangerous to the tranquility of Europe, and were bent on the cause of peace and the progress of civilisation. The object of Europe must be to cripple that power and to check that policy; and the Allied Powers knew that the best way for doing that was now to carry on the war, while the opportunity for it was so wonderfully favourable, that it would be wise to delay the war any longer than necessary. All Europe was not to be disturbed, and great interests were not to be dissevered, for insignificant purposes; and the Allied Powers were all agreed that mere repression would not postpone the danger.

The Earl of DERBY contended that the noble Earl had passed too lightly over the pinching part of the case. He rejoiced, however, at the expressions of the noble Earl, because it showed that the people of this country would never be satisfied with a mutilation of Russia prohibited and her aggressions restricted. It was our bound a duty not to desert the Circassians. It was impossible to put the Black Sea to remain a Russian lake, or the Danube a Russian ditch, and he was sure that the noble Earl's language, if followed up by the whole of the Government, would give unbounded satisfaction.

The Earl of ABERDEEN said, [illegible] speech might have [illegible] in the [illegible] but he hardly [illegible] necessary [illegible] would have been more [illegible] before the declaration of war was [illegible]. The object of the war being to protect an ally against an unjust aggression, it had never occurred to provide beforehand for Russia's conquests upon Russian territory. The intention was to protect the independence and integrity of Turkey; consequently there might be some ambiguity in documents which were prepared some time before. Active negotiations were going on between the different courts of Europe; and therefore he attached no importance to the ambiguity to which complaint had now been made. The conditions of peace must depend on the progress of the war; but, observing that Russia had not pledged herself to make reparation for the wrongs she had committed, it should, so soon as he saw a prospect of a just and honourable peace, recommend its conclusion. And keeping this object in view, the war would be carried on with vigour.

HOUSE OF COMMONS.—MONDAY.

MR. STRUTT'S EXPLANATION.

Mr STRUTT entered into an explanation of the circumstances under which he had resigned the office of Chancellor of the Duchy of Lancaster; observing that erroneous and injurious reports upon the subject had been published. He had been originally asked to take office by Lord John Russell, on the part of Lord Aberdeen. The offer had been unexpected by him. He had known nothing of the duties of the office, but supposing that, though comparatively unimportant, they could be combined with others, he had accepted the offer, stating that he placed his whole time at the disposal of the Government. He found that the duties of the office were not more laborious than he expected, and also that he had no parliamentary duties connected with the Government. Such, at all events, was the opinion of one who had served [illegible] duties to the country; but, having accepted the office he did not intended to resign it. But upon his return to town after the Whitsun holidays, he received a letter from Lord John Russell, on the part of Lord Aberdeen, the result of which, and of an interview with the former, was his learning that the Government were in a difficulty as to arrangements which they thought important, and that the disposal of his office would relieve them. He found, on inquiry, that all other arrangements had been made, and that his acquiescence of other parties had been obtained, and that nothing was wanted but his concurrence. There was no other course for him but to give this instantly. He had sedulously abstained, in making those remarks, from a single observation on the conduct of any other person; and that he had made this statement with some pain and much embarrassment.

OXFORD UNIVERSITY BILL.

The House went into Committee on the Oxford University Bill.

Lord J RUSSELL stated that the two new commissioners were the Earl of HARROWBY and Mr. Cornewall Lewis.

Mr. FREMANTLE moved the addition of a clause designed to prevent credit from being given to students, and by which he proposed to prohibit actions against students for any debts contracted when they were under age.

Mr BENLEY opposed the clause, believing that the true remedy for University extravagance would be the imparting sounder views to the young men themselves.

The CHANCELLOR of the EXCHEQUER also opposed it, admitting that the evil complained of was serious, but not considering that a sufficient case could be made out for exceptional legislation.

After further discussion, Sir. FINNN postponed his motion.

Several other amendments were moved, but none of them were carried; the bill at last passed through Committee, and the report was ordered to be brought up on Thursday.

PRISON CHAPLAINS.

The House having gone into Committee of Supply on the Civil Service Estimates, it was proposed that the sum of £164,105 should be granted for the maintenance of prisoners in county jails and lunatic asylums.

Mr SCHOLEFIELD moved the reduction of the vote by £100, being the salary for chaplain, on the ground that the same rule laid down by the Committee ought to be extended to all creeds.

Sir G. GREY said that the sum in question was given between the Roman Catholic and the Protestant chaplains; and that, if this vote were refused, the unhappy individuals in the asylum would be deprived of all religious consolation.

Mr H DRUMMOND said that the Government had no right to provoke such discussions while blowing hot and cold on the subject of Catholicism and Protestantism.

After some observations by Mr Phinn, Mr. Adderley, and Lord Seymour, Mr. Sydney, Lord Palmerston, and other members, the Committee divided, and the numbers were—For the original vote, 246; for Mr. Scholefield's amendment, 28: majority for the vote, 218.

The vote was agreed to, as were other items, and the House resumed soon after midnight.

Lord PALMERSTON obtained leave to bring in a Bill for the Reformation of Juvenile Offenders.

HOUSE OF COMMONS.—TUESDAY.

WRECK AND SALVAGE BILL.

On the question that the Wreck and Salvage Bill be considered in committee, Mr. Cardwell stated that the object of the bill was to make uniform throughout the kingdom the laws relative to wreck and salvage. To secure the desirable object, it was proposed to transfer all authority on the subject from the Admiralty to the Board of Trade.

The bill passed through Committee.

THE BARON DE BODE.

Mr. M. CHAMBERS called attention to the case of the Baron de Bode, and moved a resolution: "That the national good faith requires that the just claims of the Baron de Bode, established after protracted investigation, should be satisfied." Upon a point involving the honour of the country, Mr. Chambers hoped he would not appeal to the Commons of England in vain.

Mr DRUMMOND, in seconding the motion, would not argue the question on legal grounds. Every legal point had been fully established. The Baron had had to contend with every obstruction and every quibble which legal ingenuity could devise. Mr. Drummond would appeal from lawyers and law, from Chancellors of the Exchequer and from Attorney General, to honest men, to English gentlemen, and to common honesty.

The ATTORNEY-GENERAL said the question was not whether the Baron de Bode was a British subject, the question was whether he was within the meaning of the treaty. The Attorney-General believed that he was not a British subject in that sense; and proceeded to maintain his views by reference to the terms of the treaty, and to special claims of the Baron. The property was not confiscated because the Baron was a British subject, but because he was a French subject, and had emigrated.

After upwards of six hours of discussion, the House divided. The resolution was lost—for Mr. Chambers's resolution, 67; against it, 89: majority against it, 22.

HOUSE OF COMMONS.—WEDNESDAY.

ABOLITION OF CHURCH-RATES.

Mr. MIALL moved the second reading of the Church-rate Abolition Bill.

Mr. A. PELLATT supported the bill, observing that a third of the people of England had already relieved themselves from these rates, while another third was still liable to them for the benefit of the remaining third. He deemed the only just principle to be that of voluntaryism.

The CHANCELLOR of the EXCHEQUER admitted that the case of Church-rates was a wrong for which there ought to be a remedy; but he did not see the advantage of a demon-tration in the form of a measure which could by no possibility become law during the present session; and, therefore, he could not assent to the proposition that the alternative lay between countenancing these rates and abolishing them. The case for a change was irresistible, and the Government was prepared to encounter the difficulties attendant upon legislation upon the subject and would endeavour to deal at an equitable adjustment of the question. If the rates were abolished, we must not stop there, or the Church would be placed in a condition of inequality.

Mr PACKE opposed, and Mr. BASS supported the bill.

Mr INGHAM said that he was unable to understand the view of the Chancellor of the Exchequer on the subject of these rates, but it was evident that ministers were upon other matters not of the same opinion in the Cabinet.

Lord J. RUSSELL said that the proposal for ungiving [illegible] Church-rates was intended to forward the view [illegible] opposed to all establishments, and, as he [illegible] the Established Church, he could not [illegible]. He referred to the admirable manner in which Dissenters [illegible] said that, considering the services they had rendered [illegible] education and religion, he should be glad to make any reasonable concession; and the whole dispute in the present day arose, not upon the great evils arising from these rates, but in reference to the question [illegible] whether we could be [illegible]. It would be inconsistent with the principle of a Church establishment, and would be also unjust [illegible] Churchmen, were no funds provided for the maintenance of [illegible] which had not been erected by dissenting chapels, marl, for [illegible] who required them, but not all. We had a national Church, an hereditary aristocracy, and an hereditary monarchy; and these must stand or fall together. As this bill was subversive of one of these great institutions, he should oppose it.

Sir W. CLAY briefly replied, and the House divided.

The numbers were—For the second reading, 182; for Mr. Goulburn's amendment, 209: majority against the bill, 27. The bill is therefore lost.

HOUSE OF LORDS.—THURSDAY

The Marquis of [illegible] called attention to a letter [illegible] a branch of the [illegible] of their Lordships' House. On the 7th April Earl Grey made a considerable speech upon the [illegible] of the administration of the Army, and moved for a return of the correspondence between the different departments of the Government, and [illegible] addition made to the department of the Secretary of State for War and the Colonies; and also with regard to any changes made in the transaction of business relating to the administration of the Army. The irregularities of which he (the noble Marquis) complained was first—that a portion of the correspondence produced took place subsequently to the date of Earl Grey's motion; and, secondly, that certain observations were made by the subordinate officers of the Government upon the speech of Earl Grey, and were annexed to returns produced [illegible] officers of the Commander-in-Chief, and officers of the Commissariat, but the [illegible] of the Colonial-office were so overworked during the session that it was almost impossible to keep up with the strict letter of the returns. As to that part of the charge, he was prepared to take the entire responsibility upon his own shoulders, as those papers were produced with his entire approbation. As to the observations made by the subordinate officers in connection with those papers, he (the Duke of Newcastle) was not aware of the fact until the noble Marquis brought it under the consideration of the House.

The Earl of DERBY said he thought that this was more than a technical violation of the rules of the House; and, if it were sanctioned by their Lordships, he feel ever it would lead to serious inconvenience, and would greatly endanger the freedom of speech in their Lordships' House.

Upon a suggestion of Earl FITZWILLIAM, the Duke of NEWCASTLE consented to a withdrawal of those papers, with a view to an amended return being laid before the House.

The Encumbered Estates (West Indies) Bill was read a second time.

The following bills were read a third time and passed:—The Church Buildings Act Amendment Bill, the Episcopal and Capitular Estates Management (1854) Bill, the Witnesses Bill, and the Customs Duties Bill.

The Public Statues Bill passed through Committee.

HOUSE OF COMMONS.—THURSDAY.

The House met at twelve o'clock, and was occupied until four o'clock in discussions upon the clauses of the Drainage of Lands Bill. The bill ultimately passed through Committee.

OXFORD UNIVERSITY BILL.

At the evening sitting, the Oxford University Bill, as amended, was considered.

Mr HEYWOOD moved certain clauses, with a view, as he said, of assimilating the University of Oxford to that of Cambridge; but, substantially, to abolish certain oaths in Oxford, with a view of admitting Dissenters into the University.

Mr. COLLIER seconded the motion.

Mr. S. HERBERT said that the Government concurred in the principle of admitting Dissenters to all the rights and privileges of the University, but they thought that the House would act wisely by leaving the question to be determined by the governing body appointed under the bill. The adoption of the clause would only endanger the passing of the measure in another place.

Mr. H. BERKELEY warmly supported the motion.

A lengthened debate then took place, in the course of which the Chancellor of the Exchequer and Lord J. Russell repeated the objections urged by Mr. S. Herbert to Mr. Heywood's propositions.

The House then divided upon the first clause, which was, to admit Dissenters as students in the University. The numbers were—For the clause, 252; against it, 161: Majority against the Government, 91.

The result was received with loud cheering.

Mr. DUNCOMBE moving the second clause, which would admit Dissenters as members of the governing body,

Lord J. RUSSELL said that, after the decision to which the House had come, he would not put them to the trouble of another division.

Sir J. PAKINGTON and Mr. WALPOLE then complained of the conduct of the Government upon this subject, and urged a division.

A division accordingly took place, when the numbers were—For the second clause, 104; against it, 265: majority, in favour of the Government and against the clause, 161.

The further proceeding upon the report were then postponed until the following day (Friday).

HOUSE OF LORDS.—FRIDAY.

The Divorce and Matrimonial Causes Bill passed through Committee.

The Vaccination Act Amendment Bill and the Witnesses Bill were read a third time and passed.

The Public Statues Bill, as amended, was reported.

The Earl of ABERDEEN gave notice that on Monday he would explain the speech he had made a few nights ago in reference to the present war.

HOUSE OF COMMONS.—FRIDAY.

Mr. LAYARD gave notice that, on Thursday next, he would move a resolution that, in the opinion of the House, the language held by the First Minister of the Crown was calculated to raise grave doubts in the public mind on the subject of the war, and to lessen the prospect of an honourable and durable peace (Loud cheers from the Opposition). The motion would be to that effect, but not exactly in those words.

Lord J. RUSSELL said, the motion would have precedence on Thursday next.

In reply to Captain SCOBELL, Sir J. GRAHAM said, the loss of the *Europa* had not only affected him, and had given rise to severe reflections, partly professional. Strict injunctions had been given that no soldiers and sailors on the lower deck should be [illegible] A fire which had taken place the day before Cork and the *Europa* had been clearly traced to smoking (Hear).

Mr OLIVEIRA read the report of a [illegible] bel, recently in the newspapers, and in which Lord Drumlanrig was concerned. The noble Lord had backed a bet of 1000 sovs. against Mr. Walker. He rose to ask the noble Lord at the head of her Majesty's Government whether a nobleman having such proper ties was the fittest person to be in close connection with her Majesty (Loud laughter)? Would this Inquiry not present ("Hear, hear," and laughter)

Lord J. RUSSELL should not think it necessary to order any inquiry at present ("Hear, hear," and laughter)

OXFORD UNIVERSITY BILL.

On consideration of this bill as amended, Mr. R. D. MANGLES moved the omission of the names of the Hon. Sir John Taylor Coleridge and Sir John Arthur Awdrey from the list of Commissioners. He objected to them on account of their certain tendencies; and went over the religious history of the last few years, in order to show the justice of his charge.

The resolution having been seconded,

The CHANCELLOR of the EXCHEQUER said, the hon. gentleman had spoken of the merits of the name of Sir J. Coleridge as though it was a Government appointment, whereas the name had been merely suggested, subject to the approval of that House. He believed the learned judge had the confidence of the University of Oxford, and that the names proposed by the Government as Commissioners were those of men known for their moderation, and for their ability to discharge the duties that would be imposed upon them. The former rejection of Mr. Justice Coleridge from a commission on which High and Low Church men might properly sit, would be a judicial sentence upon one of the Judges of the land; and he trusted the House, before coming to a vote, would well weigh the evidence which had been adduced in support of the motion.

Mr. WALPOLE asked the House to acquiesce in the names proposed, and passed a [illegible] eulogium upon the character and professional reputation of Mr Justice Coleridge.

After some discussion on the motion was withdrawn, and the names of the Commissioners proposed by the Government were agreed to.

Several verbal amendments having been made in the bill, it was ordered to be read a third time on Monday.

The TOWN Improvement (Ireland) Bill passed through Committee.

The CORNEY Prisons (Ireland) Bill was read a second time.

OFFICIAL APPOINTMENTS.—Sir G. Grey has appointed Lord Hobart and Mr. Samuel Whitbread, M.P., to be his parliamentary secretaries at the Colonial Office. Mr. Whitbread receives no salary in consequence of having a seat in Parliament. Colonel Cecil Wray Forester, late of the 52nd regiment, is appointed Assistant-Sergeant at the House of Commons, in room of [illegible] promoted to be Deputy Serjeant-at-Arms, in room of Mr. Clementson, retired after many years' service. Captain Charles Frederick Wyvill, R.N., is appointed Captain Superintendent of Chatham Dockyard. Captain John Jervis Tinker, R.N., is appointed Captain Superintendent at Sheerness Dockyard, vice Wyvill. Messrs. Henry J. Allan, George F. U. Nott, Henry Dimsdale, and Frederick Richard are appointed third-class clerks in the Accountant-General's department of the Admiralty, Somerset-house.

A CANNON-BALL FROM ODESSA.—In the Underwriters' room, at Liverpool, may be seen a curious relic of the bombardment of Odessa, namely, a 68-pound cannon-ball fired by the Russians on that occasion, and which failed in its murderous purpose by killing James Shaker, a seaman on board her Majesty's steamer *Terrible*. It is apparently a 32-pounder.

A QUICK SEA PASSAGE.—The *Atrato*, the largest paddle-wheel steamer in the world, left Southampton on the 12th ult., and arrived at Colon, Panama, a distance of 4700 miles on the 26th ult. She attained, on the average, 12½ miles an hour for 272 consecutive hours, or 11 miles a day for eleven successive days. Her greatest performance was on the 13th ult., when she ran 287 miles. With the exception of her first day of starting, she never did less than 300 miles a day.

A NEW RUSSIAN LOAN.—The terms of the Russian loan contracted in Holland, for £7,500,000 sterling, are—A five per cent loan, to be paid up in full before the 9th of July, with dividend from the 1st of April, at 93. The houses by whom it is introduced are Messrs. Stieglitz, at St. Petersburg, and Messrs. Hope, at Amsterdam. The introduction of this new loan is caused a heavy fall in Russian Stocks at Amsterdam.

DEFENCE OF MORECOMBE BAY.—It is understood that Lieut. Moody, on his recent inspection of the coast, fixed upon the hill to the south east of the North-Western Hotel for a battery of three long guns of large calibre, the works to be commenced forthwith.

EFFECTS OF THE WAR ON RUSSIA.—The present war, in the midst of which we are encouraging the useful and liberal arts to an extent, and by means previously unknown in this country, has already crippled Russia to a serious extent. The Czar's Minister of Domains has just announced, by Imperial ukase, that, on account of the war, the preparations for all the agricultural classes of the population in Russia, the industrial and manufacturing exhibition in the provinces of New Russia and Lesser Russia cannot take place this year.

THE BREVET.

(From the *Gazette* of Wednesday Evening.)

WAR-OFFICE, JUNE 20.

Officers promoted by the following Brevet will receive their promotions, subject to new regulations about to be promulgated by Royal warrant.

TO BE LIEUTENANT-GENERAL IN THE ARMY.—Major-General H R.H. the Duke of Cambridge.

Her Majesty has been pleased to appoint the following officers to take rank by Brevet, as undermentioned. The Commissions to be dated the 20th June, 1854:—

TO BE GENERALS IN THE ARMY.—Lieutenant-Generals S Brown, D Herbert, Viscount O'Neill, Sir E Blakeney, Sir T Hasker, Sir J Wilson, Lord Seaton, Sir D Pitcairn, Sir A Woodford, Earl of Westmoreland, Lord Raglan, Lord C S Manners, R Ellice, G Gordon, Viscount Gough, Sir J Macdonnel, J W Sleigh, Sir W G Davy, J Yates, Sir J P Fitz Gerald, Sir A B Clifton, W C Eustace, Earl Cathcart, Sir A Leith Hay, D'Oyly, Hon H Arbuthnot, Sir J Douglas, Sir W Macbean, Viscount Hardinge, Sir W Cotton, Sir J Hanbury, Earl Beauchamp, Hon E P Lygon, H Shadforth, J M Hamerton, Sir W Tyrly, Sir G H Fitzroy, C H Berkeley, H Fonnen, Sir H King, Sir G F Napier, Sir G Scovell, Lord Downes, Marquis of Tweeddale, Sir F W Trench, H Wyndham, Sir E Bowater, Sir W M Gomm.

TO BE LIEUTENANT-GENERALS IN THE ARMY.—Major-Generals C E Conyers, G A Henderson, R B Macpherson, P Hay, A Money, J F Ewart, H A Proctor, W Jervois, Sir F Cockburn, Right Hon Sir G Arthur, Bart, K Farquharson, R Llanlyn, F A Maxwell, E Egerton, Sir W Chalmers, J C Boucher, L Argumbau, Sir H G W Smyth, Bart, F Calvert, Sir De L Evans, W H Scott, Sir T Wiltshire, Bart, Hon H E Butler, E F Lennox, J Hoste, Bainbrigge, J E Napier, N Thorne, W F Eeswe l, W L Darling, Sir J Touchwe., Sir W L Herries, J M'Donald, J W Paty, Lord J Hay, T J Wemyss, M Thomas, W Rowan, J S Kennedy, A W Lord Saundys, Sir T H Brown, A Maclachlan, Sir F Ainsworth, H Bauerwis, G L Goldie, G P Higginson, Sir G Bowles, T Bunbury, Hon H F Cavendish, J W Aldred, F W Robbins, K Madden, W Sutherland, H Rainey, Hon G Gore, W L Watson, G K Fox, G A Shawe.

TO BE MAJOR-GENERALS IN THE ARMY.—Colonels H Dwyer, J Taylor, F J Jones, J Fenet, A Pearl, M Pearshouse, C B Chatterton, J H Lefroy, Howden, J A Earl of Rosslyn, W T Knolys, E Sudd, C S Campbe., Sir H R F Davie, E F Gascoigne L B Loveu, Sir J A Cuerke, Sir H Bo elli, H J W Bentinck, J Reed, H Viscount Melville, A C Kennedy, W J Brooke, Sir C Campbell, P E Craigie, E F Murra, H Colvile, E W Bouverie, Hon T Ashburnham, M White, J Scott, J L Pennycuick, W Bird, F T Bullen, H Leopard, E W Bell, J Reed, J Jones, B G , Hon J Horace, T S Trafford, H Bristow, G S Thwaites, J Jerrard, A M , Lord Gordigan, W C Colet, Sir M Dacyll, Eden, H R H rt, C Yorke, J Campbell, Hon G Cadie, T Eddes J Perry, H Dixon, R Ketchin, A Robertson, W H Cornwall, S Stanhope, C M Hay, H Lo , Hon F Rous, J D Rundon, W Beckwith, R E Robinson, H W B , Sir A Alexander, the Duke of Wellington, J W Sandwith, P Mayo, Hon A Bourke, Menus, W Cox, G M Eden, G Dixon, F Maunsell, W J C , Hon C Turner, W Rudyer, J W Frith, T Falls, J Hails.

TO BE COLONELS IN THE ARMY.—Lieutenant-Colonels F Meade, J Williams, W F Forster, W Beetham, F Johnston, W Bragge, A Gosmide, G W Prosser, E M'Arthur, D H Macdowall, J P Hely, C B Bowers, J Arnaud, F Bowers, Sir T Bell, C Campbell, Hon A Gardiner, F M Williams, W Negan, A B Trevor, R R W Brett, W H Dalton, Earl of Albemarle, G T Colomb, Marquis Conyngham, S J Cotton, H Barlow, P Wilson, J Nadge, Hon J St V Saumarez, W J Codd, Hon R Bruce, A C V N Pole, E W F Walker, Sir C J J Hamilton, T A Drought, T H Franks, C Stuart, Hon A A Spencer, C Assmore, A Monteson, H M E Lottle, J Lawrenson, W Holmes, C Cranklyn, G C Mundy, F H C Seymour, H W Hartley, A Mackworth, L D Williams, R B Wood, C E Gold, C A Ainslie, W Gun Gell, W Pringle, J Musgreve, Sir J Lumley Longland, C Balders, F W Hamilton, W Denny, C H Doyle, Horn, J F G Campbell, H F Bonham, Lord F Fitzt. Mower, J R Smyth, W Pitman, Hon J Ward, Earl of Dunmore, R Hon Sir J Lindsay, Hon G A F Liddell, W Sutton, H Hartwright, Creagh, J H Bainbridge, A A T Conyngham, H Beadle, W Jervis, Rickets, W Baugh, Hon H G Boyle, Hon A Gordon, Le Mesurier, J Swinburn, R Kelly, G Stuart, F K , Hon Forester, G Foster, T G Harriott, J K Ross, B S Brooke, E G W Kepp, Hon A Hood, J Campbell, J C Young, H Marsh, Hon A Hood, Hon W N H ll, H Gibbon, F C Irwin, R Parker, J Brown, C Ingram, A T Hemphill, Lord G A F Paget, S Taylor, G A Windham.

TO BE LIEUTENANT-COLONELS IN THE ARMY.—J Pearson, H C Wallington, J Douglas, W J Myers, J Paterson, H C B Daubeney, F Lassington, T White, F Whittingham, G Bridge, E Bond, H Smyth, E R Holmes, Hon Conway, A B Smith, J S Smith, W Fope, H A Bosanquet, P Adams, W L Tudor, T Graham, G Pinder, G Green, R A Cathbert, M J Westrin, C Herbert, Lord A Paget, E R King, J Singleton, M B Childers, R W Disney, H H Greathead, A St G H Stepney, S Fisher, Hon H R Handcock, Hind, A F Ansell, G F F Boughey, T H Pearson, L Eyre, W Anson, G F Long, W Waugh, A Reed, J Bergeron, S Wynyard, W Hale, D C Cooper, Foster, A Campbell, J Draper, J Gerrard, A Anderson, J E Alexander, F Brown, E Lestrange, R H J B Mc Donnell, Hon Annesley, A Hamilton, W Robinson, R W Bamford, W Gordon, Deverell, M Orr, W B Caldwell, H F Hawker, J A Robertson, G Keane, E Trevor, A B L Wyatt, G H F Campbell, J B Creagh, J M Rudd, H B Harvey, E A G Muller, C F Parkinson, A Bolton, A Speidel, W Gordon, Colville, H L Pipon, J Tulloch, W Campbell, A Osterman, E Sandys, J L Cooke, G S Darrell, W J Crompton, T E Lyons, Bloomfield, J Gray, T Frost, J Imgart, J Cooper, C Wood, J F du Vernet, W T B Mountsteven, R Gong, W Cald , J P Boger, M S H Lord, O James, J Stuart, H Anderson, J Keane, Stewart, Martin, W H Colman, J Wegg, W Phillips, R C Hamilton, A Barnes, G F C Scott, A T Lockhart, W Macpherson, J Forbes, H B Rogers, G Mac beth, W R Halliday, W Johnson.

TO BE MAJORS IN THE ARMY.—E L Ingall, W Lodder, B C Mitford, J H Lye, J Richardson, W Lindsay, H S Marsden, A W Wood, H B Wayard, J D de Wend, R Dodd, B Watson, B G Legrel, W Bell, H J Day, J E Symons, J D G Tulloch, J B Sharpe, H Russell, J Kensall, R M Sutherland, W R emay, E J Vaughan, A Sandilands, A A Bruce, G Lewis, Hon R Rollo, J Butler, W O'Neil, A H Russell, A Herbert, W H H Anderson, H B Sawyer, W Carruthers, P R Jennings, J K Wilson, J H C Robertson, R Knox, F E Palmer, J A West, H C Powell, W C Stuart, S R Herdmore, G W Meehan, A Cameron, J Travers, T O W Ingram, J K Mackenzie, J H Rose, A Donegan, H Grierson, A D Fan hawe, C Gordon, J W F Audain, Hon F J E Freke, G B C Creagh, J Seward, R D Campbell, J G Stock, W Mauleverer, A G Vesey, J F Grant, W Gunn, G King, J H Strachan, W F Hardy, W Fenwick, C W Sibley, J Bruce, F W Horne, M Andrews, E Hooper, F B Stevens, T F E Chardson, E R Greg, G Reane, E G Wynyard, W Warde, M Hall, W F B Lee, J Murray, A T Heyland, E W Scovell, A Scott, D Gordon, Jackson, S E Smith, G F S Call, H D Smart, F C A Stephenson, J F Mayer, H T Bowen, G Erskine, C W Thompson, C S Teale, C P Ibbetson, T M Byrne, J D Maitland, J S Hawkins, H C O Bannerman, A D Pane, J S Wood, T Carey, H J Savage, A Low, W L Seward, A Mackay, W Carpenman, A Pigott, A C Anderson, C Murray, E L Bloose, W P Young, J Nugent, W H H Clarke, J Forster, J Crawley, W C Molina, R B Prestley, G Maxwell, J E Robertson, A R Margary, F G Hanley, J Henderson, M S I Dennis, J Beatty, H D Neville, G Frend, G B Hilton, C D Plunkett, T H L Wegsalin, J Foster, J J Bull, H F Waechter, Illis Seren, Highness Prince of Saxe-Weimar.

The undermentioned officers have been appointed AIDES-DE-CAMP to the Queen, with the rank of COLONEL in the ARMY, from the 20th June, 1854.—Lieut-Colo H V Brooke, G G T C Napier, E Lugard, H I Tucker. Honorary Aide-de-Camp—Sir R M Lawrence.

Her Majesty has been pleased to appoint the following officers of the Royal Artillery and Royal Engineers to take rank by Brevet as undermentioned. The commissions to be dated the 2 th June, 1854.

ORDNANCE DEPARTMENT, ROYAL ARTILLERY.

TO BE GENERALS IN THE ARMY.—Lieut-General A Armstrong, H Eveleigh, Hon W H Gardiner, F Walker, J W Tobin.

TO BE LIEUTENANT-GENERALS IN THE ARMY.—J Lving, F Campbell, W G Power, A Mc.donald, T J Forbes, J Paterson.

TO BE MAJOR-GENERALS IN THE ARMY.—Colonels R Douglas, P M Wallace, R Jones, J E Jones, J Michell, E C Whinyates, T Dickenson, T Dyneley, G Cobbe, A C Mercer, Sir W M G Colebrooke, W Cator, J Chesser, A Maclachlan, J Connor, E Kirby, J W Kettlewell, G C Collin, J S Rawlins, D Grant, H A Scott, W Wyde, H C Russell.

TO BE COLONELS IN THE ARMY. J Gray, J Foot, Hon W Arbuthnot, H Bleoley, W L Bury, G J Belson, Lieut. Col. R F Romer, R C Maitsward, J Gordon, J H Wood, G Durnford, R B Rawnsley, R Hardman, J Hanwell, A Andrews, W E Lock, P Sandilands, B Wills, B H Vaughan Arbuckle, F F Strangways, J H Freer, A W Hope, J L Smith, J Eyre, C Oliwy, W C Hawkins, R Palmer, R S Armstrong, G T Rowland, A R Harrison, H R Wright, W H Bent, R Clarke.

TO BE LIEUTENANT-COLONELS IN THE ARMY.—W H Askwith, H S Rwan, C Dickson, Hon R C H Spencer.

TO BE MAJORS IN THE ARMY.—F Duclop, F Dick, A Tyler, G J Dalton, D E Wood, R M Tulle, F M Kardley Wilmot, J W Fitzmayer, G R H Kennedy, G Sandham, C V Cockburn, J H Franklyn, G Gamber, F S Hamilton, E W Crofton, S P Towns end, P E , N E Harrison, G J Buchanan, W E Gilbert, H Aytoun, C B Levinge, A G W Hamilton, A Irving, C Bingham, J N A Freese, F D Cuevedand.

ROYAL ENGINEERS.

TO BE GENERALS IN THE ARMY.—Sir G Wilmore, F R Thackeray, J F Birch, G Nicols, G Wright.

TO BE LIEUTENANT-GENERALS IN THE ARMY.—G Cardew, E Fanshawe.

TO BE MAJOR-GENERALS IN THE ARMY.—Sir J M F Smith, J Oldfield, M C Dixon, P D Cu der.

TO BE COLONELS IN THE ARMY.—Lieut.-Colonels R S Piper, M A Waters, P Cole, E Mason, J C Victor, C Grierson, L A Hall, P Yule, W M Goreat, D Bolton, F W Whinyates.

TO BE LIEUTENANT-COLONEL IN THE ARMY —Major J C Burmester.

TO BE MAJORS IN THE ARMY Captains W E D Broadhton, R J Nelson, G Burgoynne, J Naylor, Sir W P Denison, J Williams, G W Durnford, E T Lloyd, H James, T R Mould, G Wynne, W C Sacre, H D Harness, E T Ford, W Yo.land.

ROYAL MARINES.

Her Majesty has been pleased to appoint the following officers of the Royal Marines to take rank by Brevet, as undermentioned. The commissions to be dated June 2 :—

TO BE LIEUTENANT-GENERALS IN THE ARMY.—Major-Generals E Nicolls, G Lewis, F Lawrence, G Jones, W H Connolly, G Best,

TO BE MAJOR-GENERALS IN THE ARMY.—Colonel-Commandants C Mullins and W Fergusson.

TO BE COLONEL IN THE ARMY.—Lieut Colonel D Cumph R.

TO BE LIEUTENANT COLONEL IN THE ARMY.—Major W Plangford.

TO BE MAJORS IN THE ARMY.—Captains J Ross, A Anderson, R Wright, J Fraser, T Holloway, J C G Courtis, P B Nolloth, F A Campbell.

EAST INDIA COMPANY'S FORCES.

Her Majesty has been pleased to appo nt the under-mentioned officers of the East India Company's Forces to take rank by Brevet in her Majesty's Army in the East Indies as follows. The commissions to bear date 20 h June, 1854.—

TO BE GENERALS IN THE ARMY.—H S Osborne, Sir J L Caldwell, G Carpenter, Sir D Leighton, J We sh Sir J Russell, M White, R Polwhele, Sir R Louston, J Greenstreet, G B Kemp, J Munro, J A P Macgregor, Sir J Frederger, Sir W Roberts A Duncan, R J Later, J F Dyson, J Doyston, A Fair, Sir J S Lushington, W C Fraser, W Gilbert.

TO BE MAJOR-GENERALS.—J Henry, C R Skar n, S Sandys, J Anderson, F Hearle, T M Douglas, W K G Bostley, C Herbert, G P Wyner, J Paul, J G Griffith, S Shaw, F L Doveston, C B Jones, J H Dawes, M Paul, C Payne, J Palmer, Sir J Cheape, J Low, J Lutrs, J Tulloch, R Powney, Sir H M Wheeler, G E Gowan, P Montgomery, J Stuart Cowens, W H Hewitt, J Hoste, G W A Lloyd A ton, A B D , J W Cleveland, R Bird, D Cannon, W D Bruce, J Cox.

TO BE COLONELS.—Lieutenant-Colonels R Burd G Hicks, H Bailey, H Dick, W Mactier, J Nash, J Alexander, J Hume, Hon A Ashley, S Stewart, E Pettingal, H Hancock, H J Wood, R Hawkins, R C Griffin, G C Whitlock, F G Lister, D Downing, P Thomson, I Mackenzie, A Goldie, W H Wake, T M Sherry, W N T Sneu, J C Pitt, F Beandye, R Bithell, H Pitt, R Johnson, J Mayle, L Layrie, J Tulloch, T Powhele, J H Hamilton, P Bernie, J H Bruce, C Cumberlege, Fisnes, J T Boileau, A W Lbarlow, W J Cosens, J H Lawrence, J Crauford, H Stewart, Hon A Gardiner, J A Sabapaw, Æneas Shiress, I. Hessiter, W Forster, S Stuart, H Tennant.

TO BE LIEUTENANT-COLONELS.—Majors J Nesom, H P Burn, E R Meinwaring, A C , J Nesom, J H , H P Burn, E R Meinwaring, A C , J Nesom, J H , H P Burn, E R Meinwaring, A C , J Nesom, J H ,

RECRUITING THE ARMY.

After paying for these items, not much can remain for the individual's benefit out of £5 5s. 6d. There are other small sums allowed by Government to officers of various departments on passing a recruit, but they in no way affect the soldier.

In the infantry, the bounty is thus apportioned:—On attestation, 2s. 6d.; on intermediate approval, 7s. 6d.; on final approval, and to provide himself with a kit, £3 10s.: total, £4. Like the cavalry recruit, the whole of his miscalled bounty is expended on his necessaries, exclusive of the half-crown and 7s. 6d. paid to him as already shown. Continuance of so penurious an arrangement will never lead men to enter the service during the war. Raise the infantry bounty to £5, and the cavalry in proportion. When passed, let the inspecting field-officer pay the money into the recruit's hand. Furnish him with a kit free of expense on joining his regiment or dépôt, and the difficulty at present experienced in raising soldiers will cease to exist.

INSPECTION OF THE ESSEX MILITIA (GARRISON) AT THE TOWER OF LONDON.—(SEE PRECEDING PAGE.)

CEREMONY OF LAYING THE FOUNDATION-STONES OF THE NEW PIERS AT THE MOUTH OF THE TYNE.

LAYING THE FOUNDATIONS OF THE TYNE PIERS.

The important ceremony of laying the foundation stones of the Piers at the mouth of the Tyne took place on Thursday, in presence of the River Tyne Commissioners, the members of the Corporation of Newcastle, the Mayor and Corporation of North and South Shields, many of the clergy and influential gentlemen of all the towns on the borders of the Tyne, and a large concourse of spectators. The amount of property destroyed and the number of lives lost within the proposed area is unequalled in any harbour in the kingdom, and the inhabitants of the Tyne will not soon forget the awful spectacle which ushered in the year 1854, when upwards of twenty vessels were stranded at the very entrance of the port, occasioning grievous loss of property, and many a mourning and desolate hearth

In both the towns at the mouth of the Tyne the day was observed as a general holiday; and in Newcastle, though no holiday was kept, yet there also it was observed as a day of rejoicing; and the River Commissioners, the Masters and Brethren of the Trinity House, the Corporation, the Vicar of Newcastle, the Rector of Gateshead, &c., proceeded, at ten in the forenoon, with a number of the inhabitants, in the city barges, steamers, &c., to take part in the proceedings. About twelve o'clock the marine cortége landed at the South Shields Ferry, where they were joined by Matthew Poppelwell, Esq., the Mayor of Tynemouth, and received by the Deputy-Mayor of South Shields with a short and appropriate address of welcome; to which Mr. Cowen, on the part of the Commissioners, appropriately responded. The address and the response were both received with loud and repeated cheering; and after the procession was marshalled, and with the bands playing national airs, the gentlemen proceeded down King-street, towards the place of their destination. The Corporations of South and North Shields, the Clergy of the borough, and great numbers of the principal inhabitants, took part in the ceremony. Bodies of seamen and pilots also attended with flags; and along the line of march the windows were thronged with ladies, who welcomed the procession by the waving of handkerchiefs.

Arrived at the place for the ceremony, everything under the able direction of Mr. Brooks, and his intelligent lieutenant, Mr. Gibson, was found to be in preparation, and, an active body of police having cleared a space, the procession formed a circle round the stone, with the principal actors on the occasion in the centre. The foundation-stone of the Pier lies considerably below high-water mark, and of course it was necessary that the time of the ceremony should be when the tide was out. A breast-work of stone was thrown upon the line of the intended pier, and at the termination shears were erected, to the ropes of which was suspended the foundation-stone. On the stone being placed, the Chairman of the Commissioners adjusted it with a plumb-line and struck it with a mallet. As soon as the proceeding was over, the Rev. S. B. Brasher, Incumbent of St. Stephen's, offered up an appropriate prayer—a part of the ceremony which was conducted with great reverence, and joined in by all the persons around with becoming respect and feeling. The foundation was then declared to be laid, and the bands played the National Anthem, amidst loud and continued applause. The Chairman

OPENING OF THE NEW THEOLOGICAL INSTITUTION, AT CUDDESDEN.—THE ADDRESS OF THE BISHOP OF OXFORD.—(SEE NEXT PAGE.)

of the Commissioners, standing on the stone, then addressed the persons assembled at some length. The proceedings closed with a round of cheering; and after the company had partaken of wine, which was plentifully supplied by the commissioners, the procession formed and marched to the ferry landing.

Here they crossed the river in the ferry, barges, and steamer, which received a hearty welcome from the Mayor and Corporation of North Shields, who headed the procession to the New Quay in Tynemouth, the Commissioners coming next, followed by the Corporation of Newcastle and South Shields, and accompanied by those of the inhabitants.

The procession, having with some difficulty made their way over the rocks and slippery stones, formed in circle round the stone, and the inscription having in like manner been read, the Chairman of the Commissioners (as at South Shields) was presented by Mr. Ivens with a silver trowel, which he adroitly traced over the surface of the mortar, and the stone was swung in to its bed, and its adjustment tested by the Chairman with plummet and line; after which he tapped on the stone with a mimic oaken hammer, and declared the foundation duly laid. The ceremony took place about three-quarters before three. The Rev. Christopher Reed, Vicar of Tynemouth, then offered up an appropriate prayer, which (as at South Shields) was [illegible] by the company, with great reverence and respect.

The inaugurative proceedings of the day were appropriately terminated by a banquet in the Assembly-rooms, North Shields, given by Matthew Popplewell, Esq., the Mayor of Tynemouth, and to which he had invited the members of the River Commission, the principal members of the civic and municipal bodies of Newcastle-on-Tyne and Gateshead, and of North and South Shields, with the [illegible] guests of each place, and the neighbourhood, more particularly of Shields.

OPENING OF THE CUDDESDEN THEOLOGICAL INSTITUTION.

THE opening of this Institution took place, on Thursday week, with an impressive ceremony, which is fully reported in the *Oxford Chronicle*. It will be remembered by our readers that the chief corner-stone of the new building was laid in April, 1853, by the Lord Bishop of the diocese, and during the comparatively short period which has intervened, a handsome building has been erected, to be devoted to the purpose of supplying a want which is greatly felt in the Established Church. The Institution was opened at Whitsuntide for the reception of students, members of the Universities who have passed their final examinations, and to students of King's College who have passed the two years course there, or graduates of Trinity College, Dublin, holding the Divinity testimonium.

The new College has been erected from designs furnished by Mr. Street, architect, of Oxford. It is situated just opposite the Episcopal Palace, and contains rooms for twenty-one students, a dining hall, common room, oratory, and rooms for a vice-principal. The style is Decorated Pointed. The rooms are of very different sizes, and the upper story is lighted with large dormer windows with hipped gables on the side of the principal roof. An elaborate staircase turret, with pyramidal spire, makes a conspicuous and very ornamental feature on the exterior.

At the ceremony, on Thursday week, no less than eight prelates of the Establishment and two hundred and fifty of the clergy congregated together. There was also a large attendance of laymembers of the Church from the surrounding district. A choir of about 100 voices, elected from Culham and Oxford, under the direction of the Rev. Mr. Fisher, sang greatly to the solemnity of the ceremonial.

The ceremonial commenced about twelve o'clock at the parish church; the Provost of Oriel and attendant members of the College and clergy of the Church, and preceded by the choir, walking in procession from the Palace. The Rev. G. W. Huntingford chanted the sublime Litany; after the Church was said by the Rev. J. Gept and the choir sang Anthem the Lord Bishop of New Zealand preached an eloquent sermon, selecting his text from Isaiah lx. 22 verse. "The little one shall become a thousand."

The procession at the church being concluded, the persons [illegible] re-formed and advanced to the Collegiate buildings. Having reached the ground in front of the College, the clergy and choir being arranged on either side in places appropriated to them, the special service of the day commenced. The appearance of the assembled multitude in front of the College at this moment was most interesting and imposing. Among the company present were the Bishop of Oxford, the Bishop of Lincoln, the Bishop of Chichester, the Bishop of Worcester, the Bishop of Bangor, the Bishop of St. Asaph, the Bishop of Natal, the Bishop of New Zealand, Sir George Grey, the Dean of Peterborough, Archdeacon Bickersteth, Archdeacon Clerke, the Warden of Radley, the Warden of Bedford, the Master of Balliol, the Rev. Thomas Bowdler, Prebendary of St. Paul's, the Rev. A. C. Hall, Principal of Culham Training School, &c. The service being concluded,

The Bishop of Oxford addressed the assemblage at considerable length, the object of [illegible] respect of the institution.

The Bishop of Lincoln then address[illegible] and was followed by the Bishop of Chichester, who spoke of the great advantages which had resulted from the establishment in Chichester of a similar institution to the present.

The Bishop of St. David's, the Bishop of Worcester, and the Bishop of Natal, next spoke; and the Bishop of New Zealand referred to an establishment which he had founded in his infant diocese, 15,000 miles from any University at all.

The Bishop of Oxford then brought the services to a close, by thanking the choir for their attendance. His Lordship pronounced the Benediction in his peculiarly impressive manner, and the interesting services of the day terminated.

We understand the collection at the conclusion of the service at the parish church amounted to £400

The period of the proceedings represented by the Artist is that of the Bishop of Oxford addressing the assembly from a raised platform; the clergy being drawn up in two lines from the outer gate to the door of the College. The Bishops were on the Bishop of Oxford's right hand, in a semicircle. The several Bishops in turn spoke from the platform.

There was a crowd of laity, ladies and gentlemen, outside the clergy; outside the wall were rustics, &c.

OPENING PUBLIC LIBRARIES ON SUNDAYS.—At the last meeting of the Oxford Town council, the Mayor presiding, at which he had received from the parishioners of St. Martin's, assembled in vestry on Holy Thursday, protesting against the opening of the Public Reading Room on Sundays. A discussion ensued, extending over several hours, and ultimately a resolution, "that the memorial is mischievous and uncalled for," was carried by 12 votes to 11.

THE NEW DEAN OF WINDSOR.—The Hon. and Rev. Gerald Wellesley, who has been appointed to the deanery of Windsor, is a son of the first Baron Cowley—who was our Ambassador at Paris, Ambassador at the Court of Vienna, and who filled other diplomatic situations—and brother of the present peer.

CRICKET.—Of the first matches of the season was played on Lord's on Monday and Tuesday—the M. C. and Ground against the Gentlemen of Hertfordshire. The latter obtained 77 runs in their first innings, and 61 in their second. The M. C. had 75 runs in their first, and 69 in their second, thus winning by four wickets.—The First and Second Eleven of the Gentlemen of Middlesex played a match at the Oval, on Monday, when the first battalion won by ten wickets.

RACES TO COME.—On Monday, and following days, the Carlisle take place, the Beverley, Hull and East Riding, on Wednesday and Thursday; the Bibury also on Monday; Sandwich, on Tuesday; Ludlow, on Friday and Saturday; and on Friday, the Winchester meeting takes place.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The arrival of news from the East to the effect that the Russian troops have received orders to re cross the Pruth, added to their severe losses before Silistria, and the firm attitude which Austr is now resuming, have had a most influence upon the market for the Funded Debt. An increase in prices equal to *three per cent* has taken place, and there appears so be every prospect of even a greater improvement in them. The great scarcity of money and the large temporary expenditure of millions from various quarters, have, no doubt, given strong support to the market; whilst the second issue of £2,000,000 Exchequer Bonds, at 97 15-16, or terms which pay exactly four per cent, has put at rest, at least for the present, all speculative rumours that the Chancellor of the Exchequer was about to come into the money market for a few [illegible]. The first instalment upon the £2,000,000 has been paid; the second will become due on the 8th of July; the third on the 22nd of August, and the fourth on the 10th of October. It has been agreed that no further issue of these bonds will take place within the next ten weeks.

[illegible] Exchequer Bills have now been admitted [illegible] Consols. This is an important step, and our fundholding private bankers should have no long opposed their [illegible] holding, because [illegible] that bankers now [illegible] more simplified and [illegible] of cheques. [illegible] part of silver has been [illegible] at 5s. 2d. per ounce, being [illegible] of 1d. per ounce since [illegible] sale.

The Consol-market [illegible] very active, and prices advanced 2 per cent. Great complaints were made of a scarcity of stock. The Three per Cents Reduced were done at 92¾ to 93; Consols for opening, 92½ to 93⅜; and the New Three-and-a-Quarter per Cents, 93⅜ to 93⅝. Long Annuities, 1860, were 6 9-16ths; India Bonds, 3s. prem.; Exchequer Bills, par. to 3s. prem.; Exchequer Bonds (Serip), ½ prem. On Tuesday prices were tolerably firm, but the business done was not to say extensive. Bank Stock sold at 206 to 208. The Three per Cents Reduced marked 92¾ to 93⅛; Consols for Account, 92⅞ to 93⅛; and the New Three-and-a-Quarter per Cents, 92⅞ to 93⅜; Long Annuities, 1860, were 6 9-16ths to 11-16ths; Ditto, 1859, 4⅜; India Bonds were done at 3s. prem.; Exchequer Bills, par to 1s. dis.; Ditto, Small, 1s to 2s. prem.; Exchequer Bonds (Serip), ½ prem. Prices showed a tendency [illegible] on Wednesday, and the Three per Cents Reduced were [illegible] to 93⅛; Consols for Account, 93 to 93⅜; and the New Three-and-a-Quarter per Cents, 93⅜ to 93⅝. Long Annuities, 1860, were 4⅜. India Bonds were quoted at 2s. dis.; Exchequer Bills 1s. to 4s. prem.; and Exchequer Bonds (Serip), 2 to 3s. prem. Considerable animation in the Consol-market on Thursday, and prices steadily improved. The Three per Cents Reduced realised 93⅜ to 94⅛; the Three per Cents Reduced, 93⅝ and 94; Three-and-a-Quarter per Cents, 93⅝ to 94; and India Bonds, 2s. dis. Exchequer Bills were tolerably firm, at 2s. dis. to 2s. pm. Towards the close of the day stock was unusually scarce.

For all Foreign Bonds the market has been active, and a considerable business has been done at improved quotations. Equador Bonds have marked 4; Granada, One-and-a-Half per Cents, 13; Mexican Three per Cents, 24⅜; Peruvian Three-and-a-Half per Cents, 67⅛; Ditto Three per Cents, 45; Ditto New Deferred, 8½ ex div.; Spanish Three per Cents, 41; Ditto New Deferred, 19½; Belgian Four-and-a-Half per Cents, 94; Dutch Two-and-a-Half per Cents, 58⅞ to 59; Dutch Four per Cents, 97½; Chilian Five per Cents, 95½; Chilian Three per Cents, 75¾; Dutch Five per Cents, 10.; Russian Five per Cents, 98; Ditto Four-and-a-Half per Cents, 86.

Most Miscellaneous Securities have been in good request, and the quotations have had an upward tendency. Australian Agricultural have [illegible]. Australian Freehold Land and Emigration, Ditto Land Company, Crystal Palace, 1½; Ditto, New B Shares, 4; Electric Telegraph, 18¾; London Dock, 103½; Peel River Land and Mineral, South Australian Company, 4½; Van Diemen's Land Company, 2½; Canada Land Company, 3½; Ditto Land and Emigration, 2½; Ditto Land and Canada Investment, 1½; Ditto Land and Mortgage, 1½; Ditto Land and Timber, 1½; Ditto Land and Railway, 1½; Ditto Land and Loan, 1½; Ditto Land and Mortgage, 1½; Ditto Land and Mortgage, 1½; Ditto Land and Mortgage

TO NERVOUS SUFFERERS.—A Reured Clergyman, having been restored to health in a few days, after many years of great nervous sufferings, is anxious to make known to others the means of cure, and will therefore send (free) to those who enclose a stamped envelope properly addressed, a COPY of the PRESCRIPTION used. Direct, the Rev. E. DOUGLASS, 18, Holland-street, Brixton, London.

A NEW DISCOVERY in TEETH.—Mr. HOWARD, Surgeon-Dentist, 52, Fleet-street, has introduced an entirely NEW DESCRIPTION of ARTIFICIAL TEETH, fixed without springs, wires, or ligatures. They so perfectly resemble the natural teeth as not to be distinguished from the originals by the closest observer; they will never change colour or decay; and will be found superior to any teeth ever before used. This method does not require the extraction of roots, or any painful operation, and will support and preserve teeth that are loose, and is guaranteed to restore articulation and mastication. Decayed teeth rendered sound and useful in mastication.—52, Fleet-street. At home from 10 till 5.

Now ready, price 8s.,

THE ILLUSTRATED LONDON NEWS.

No. 690.—VOL. XXIV.] SATURDAY, JULY 1, 1854. [WITH A SUPPLEMENT, SIXPENCE.

ALLEGED RETREAT OF THE RUSSIANS.—LORD ABERDEEN'S EXPLANATION.

THE week has been fruitful in great events. The raising of the siege of Silistria has been confirmed; the Czar has consented to evacuate the Danubian Principalities; and the Prime Minister of Great Britain, made painfully aware that he had shocked the feelings of the people, and imperilled the existence of the Administration of which he is the head, by his untoward speech in answer to Lord Lyndhurst's eloquent denunciation of Russia, has made the *amende honorable*, and endeavoured to place himself right in the estimation of the world. The most important of these events is the raising of the siege of Silistria. The Turks have fought their own battle, and demolished the favourite fiction of the Czar, that Turkey is "a sick man." Simultaneously with the confirmation of this news, Europe is informed that, in consideration of what he calls his "high regard" for the Emperor of Austria, the Emperor of Russia has consented to withdraw his invading armies from the Turkish territory. This news, however, has not yet reached us in a positively authentic form. It would, doubtless, be a salve to the wounds which the vanity of the Czar has received, if he could persuade his subjects that his personal friendship for the Emperor of Austria, and not his wholesome fear of the valour and energy of his foes, had induced him to withdraw his troops into his own territories; but we doubt whether even the Russians will be deceived by such a romance. The serfs are willing to believe a great many extraordinary things, especially if they tend to the glorification of the Emperor; but Napier is so close to St. Petersburg, that the task of deception is not easy either for the Emperor or his people. Like the rest of the world, the Russians will, perhaps, discover that if the brave Turks had not made so noble a defence of Silistria, and if that fortress had fallen under the attacks of Paskiewitch, Gortschakoff, Lüders, and Schilders—all wounded beneath its walls—they would have heard nothing of the high regard of Nicholas for his Austrian friend, and have seen no change in his determination to march across the Balkan. The arguments of Francis Joseph and his Ministers were, doubtless, quite sound—but the bullets of the Turks, and the fleets and armies of the Allies, were the real persuaders and convincers. A further application of the same kind of reasoning—the only kind that is of the least efficacy with such persons as the CZAR—will, doubtless, be tried with all possible speed.

We need be under no apprehension of the results which the retreat of the Russians—supposing it to be confirmed—will produce upon the policy of Austria and the other German Powers. Though the occupation of Moldavia and Wallachia by the Austrians would give as much trouble to Europe as their invasion by Russia, if Austria were to turn traitor, or had been acting throughout in collusion with the Czar, there is no reason to anticipate such suicidal folly on the part of that Power. Austria, we have not the slightest doubt, is acting honestly; while, as regards Turkey and the Allies, the retreat of the CZAR'S armies will but induce them to press upon him with greater vigour. Even were Great Britain and France inclined—which, fortunately, they are not, and cannot be—to spare the arch offender, and to accept his evacuation of the Danubian Principalities as the natural conclusion of the war, and a sufficient atonement for his misdeeds, Turkey has gallantly established her right to settle the question for herself. She is no longer in the condition of a helpless protégé of the great Powers, but stands as their equal, and will have an equal, if not a superior, voice in the arrangements of pacification. Full indemnity for the past, and ample security for the future; the annulment of all previous treaties, and the restoration of the Crimea—these are the objects which the Turks will not only have the right to demand, but, with the exception of the Crimea, the power to enforce. On the last-mentioned point the Allies will have the casting vote, for without their aid it would be impossible for Turkey to regain that valuable possession. It may be anticipated that, in this instance, the Allies will not fail to see that their interests and those of Turkey are identical. The total freedom of the Black Sea is essential, not only to the security and independence

VARNA.—PUBLIC FOUNTAIN.—(SEE NEXT PAGE.)

of Turkey, but to the future tranquillity of Europe. Even Austria and Prussia are as much interested in it as the Maritime Powers. Confined to the Baltic, Russia could not become a naval Power of sufficient magnitude to trouble the peace of the world; but, with the command of the Black Sea, and with her present policy of aggrandisement and aggression, she would always be a dangerous nuisance to every State in Europe. The war will, therefore, proceed; and Austria and Prussia, if inclined to back out of it, may do so without in the least degree interfering with the plans of those who have hitherto borne the brunt of it, and earned the right to say what its aims and objects shall be. The game is in the hands of the Three Powers; and if Austria and Prussia really desire to befriend the vanquished, they must wait until he be vanquished a little more signally. They must hold on until his final and utter discomfiture, when they may perhaps be allowed to plead for as much mercy as will be consistent with justice to the States which he has injured, and to the mighty interests of civilisation which he has imperilled. The *prestige* of Russia is at an end. Not only for the five-and-twenty years, which Lord Aberdeen seems to have once considered a long and satisfactory term to keep the monster at arm's-length—but for a whole century, it will be impossible that the name of Russia should excite in Europe the same vague ideas of power and terror that it excited for the twenty-five years previous to the Emperor's late onslaught upon Turkey. The delusion is self-exposed. The fraud has tumbled to pieces. The mighty giant that loomed on the far horizon, filling statesmen with perplexity, and nations with dread, turns out to be a giant in outline only—a mere giant of mist and rain, that dissipates at the first collision with a hard reality.

Lord Aberdeen's explanation was much needed. A very painful impression was created by his speech of the 19th of June. While the two extreme parties of Opposition—parties that are agreed upon the justice of the war, and upon the necessity of its vigorous prosecution—united in their interpretation that his Lordship was at the best but lukewarm in the cause, his own friends and supporters came to the melancholy conclusion that personal predilection for the Czar had blinded him to the motives and consequences of Russian ambition; and that, in his desire for peace, he was not sufficiently sensible of the evils that would result, if peace were too hastily made, or of the encouragement that would be given to the disturber of the world, if he were not signally punished for his nefarious aggressions. But it appears from Lord Aberdeen's explanations of Monday last, that he has not, and never had, any such ideas. He utterly disclaims them, and attributes to his own imperfect utterances and ambiguous phrases the misunderstanding, which was unfortunately but too prevalent, as to his real meanings and intentions. If his honesty ever stood in need of vindication, it would be sufficiently cleared by the obviously sincere and genuine expression of his sentiments as soon as he was made aware of the doubts and misgivings that his previous speech had produced on the public mind. There are, however, but few, if there be any, who believe that his Lordship is not a thoroughly honest public servant. Those who have but little faith in the capacity to guide the fortunes of England at the present time, are more considerable in number; but we think that the majority even of these will, after his last speech, give him credit both for honesty and sagacity. What he may have done or said on the occasion of the extortion from Turkey of the disastrous Treaty of Adrianople a quarter of a century ago, is—though interesting, and even important in an historical point of view—but of little consequence compared with his present sentiments upon the Russian aggression, and upon the efforts necessary to restrain and to punish it. Upon this point his Lordship's explanations prove that he agrees with the public sentiment of his own and every other civilised country; and that, if he were misunderstood, his oratorical powers, and not his principles, were to blame. Under the circumstances, Mr. Layard has acted wisely in withdrawing his motion. It would, however, conduce, we think to the satisfaction of the public, and to the influence of the British Government throughout Europe, if an opportunity were afforded for a debate on the whole question, when the Ministry, through the medium of Lord John Russell, might repeat in Parliament what has been said beyond its walls by the leader of the Lower House. Lord Aberdeen's explanations satisfactory as they may be, would be all the better for a little cackling on the part of some more popular and more brilliant member of the Ministry.

THE WAR.

PLAN OF THE ALLIED OPERATIONS.

By the arrival of the *Indus*, we have intelligence from Constantinople to the 20th ult. The embarkation of French troops for Varna still continued. Prince Napoleon's division had sailed. The general impression at Constantinople was that an attack on Sebastopol was in contemplation. Admiral Brust has been ordered to join the Allied squadrons of the Black Sea—an immense number of shells of enormous calibre had arrived at Varna—and the scheme of the army destined for the East now includes a hundred thousand men.

The attack on Sebastopol will be both by sea and land. Nothing is known as to the number of Russian troops in the Crimea; some accounts represent them at 30,000, others at 100,000. The retreat of the Russians from the Principalities will enable them to concentrate their forces in the direction of the Crimea. The Russian army in Asia is said to be acting only on the defensive. It has lately sustained great losses from desertion.

Letters from Kars, bearing date the 30th ult., state that a Circassian army corps, chiefly composed of Russian deserters, had completely routed a Russian division, from 14,000 to 15,000 strong, near a place called Kiresch. Two thousand Russians were slain on the field of battle, and three guns have been captured. Emir Emin—or, according to other accounts, Emir Mehemet—the leader of the victorious troops, closely pursued the fugitive Russians, and few of them are said to have escaped the general massacre.

THE WAR ON THE DANUBE.

THE news from the seat of war since the 15th ult. has been exceedingly meagre. All accounts agree in representing the Russian army as retreating *en masse* from its head-quarters at Kalarasch *viâ* Schodjak, Ibrailla, and Galatz, but very little is said as to any movement of the Turks. The desperate conflict, reported last week, in which the Russian army was said to have been driven across the Danube, has not yet been confirmed. The formal order of the Czar for raising the siege of Silistria is said to have been received at Kalarasch, on the 23rd, previous to which Prince Gortschakoff had gone to Bucharest, while Prince Paskiewitsch had been ordered to proceed to Kiew, for the purpose, as is reported, of meeting the Czar, who is anxious to learn why his peremptory orders have not been fulfilled.

The entry of the Austrians into the Principalities is decided on; and Count Coronini, with the first division, to be followed closely by a second, is ready to descend the Danube to Giurgevo, whence he will march to Gliargevo, whence he will march to Bucharest. M. de Bruck is to communicate with the Porte as to the steps necessary to be taken with a view to the occupation of the Principalities by the Austrians.

The treaty between Turkey and Austria provides that the earliest order of things shall be re-established in the Principalities; and that military measures shall be concerted between the two Powers regarding the treaty. The evacuation of the Principalities to take place on the conclusion of peace. The latter to be based upon the maintenance of the sovereignty of the Sultan, and the integrity of the Ottoman Empire.

A letter from Vienna, in the *Moniteur* of Wednesday, states that Colonel Hallk (of the Austrian army) is about to start for the headquarters of Omer Pacha, "in order to have an interview with that General, and with the commanders of the English and French troops, so as to combine the operations of the three armies." This piece of intelligence is, to a certain extent, confirmed by the *Soir*, which states that it is believed in high circles that the occupation of the provinces of the Danube by Austria will not prevent the Turkish army and the armies of the Allies from entering the provinces for the purpose of pursuing the war against Russia.

Letters from Londberg, of the 18th, state that Russia continues to send considerable troops towards the Austrian frontier. There is not a single town in the government of Kiew that has not a garrison. A camp has been established near Dubner. Three regiments of the Guards, which had recently arrived at Kiew, have received orders to proceed to the frontiers of Gallicia. On the 25th th. Cossack pickets entered into the Rothenthurm pass, in Transylvania. In several places on the Transylvanian frontier supplies for the Russian cavalry have been collected.

ARRIVAL OF THE FIRST DIVISION AT VARNA.

The first division arrived at Varna on the 13th ult., and the Duke of Cambridge, his staff, and the Brigade of Guards, landed on the following day. Lord Raglan was unable to go along with it in consequence of indisposition, which confines him to his quarters at Varna. The vessels in which the divisions commanded by his Royal Highness arrived were the *Melbourne*, the *Jason*, the *Hydaspes*, the *Andes*, the *City of London*, the *Emperor*, and the *Golden Fleece* steam-ships, and the *Sir George Pollock*, the *Pyrenees*, the *Colgraine*, the *Marquis of Anglesea*, the *Armadale*, the *Neptaliator*, and the *Monarchy* sailing transports. The division, consisting of the Brigade of Guards and the Highland Brigade (42nd, 79th, and 93rd Regiments), was conveyed with the greatest comfort and celerity from Scutari, and was speedily landed with baggage, stores, horses, &c., complete, as the boats of the English, French, and Turkish men of war lying in the bay all worked in friendly rivalry, rowing the troops on shore as fast as they could.

The *Himalaya*, with the 5th Dragoon Guards on board, arrived in the bay on the previous Monday evening, having left Cork on the 23rd May. She carried 330 horses and 323 men of the regiment, and she reached Malta in seven days and twenty-two hours (all well)—the quickest passage ever known. The feat is no easy one, as few vessels, if any, have ever gone over the same course, but it will be difficult hereafter to match her astonishing performance. From point to point she was only eleven days and nineteen hours under steam between Cork and Varna.

The men disembarked on the 14th, in fine order and spirits. Every man rode his own horse (a fact, perhaps, without a parallel, after such a voyage); and both the French and the natives on shore testified in the liveliest way their admiration at the gallant martial look of the regiment as it formed on the beach, and rode away to its camp, by the side of the bay, opposite the town of Varna. Only two horses were lost on the passage, and nineteen troopers. From point to point she was only eleven days and nineteen hours under steam between Cork and Varna.

The Dragoons were white calico covers to their helmets, but Sir George will not allow them to wear them if he can help it. He dislikes these covers exceedingly, because they are, he thinks, unsoldierlike; and his own division (the Light) is forbidden to wear them on any account.

Upon the preceding page is a Scene sketched at Varna, showing one of its principal Fountains, and a group of its people in their picturesque costumes.

THE ALLIED TROOPS AT VARNA.

Although it is only a few weeks since the Allied forces arrived in Varna, the appearance of the principal streets has been completely changed by the restless activity and energy of the French. Old blind side walls have been broken down, and shops opened, in which various necessaries, but even luxuries, can be purchased; the streets, once so dull and silent, re-echo the laughter and rattle of dominoes in the newly-established cafés. Wine-merchants and sutlers from Algiers, Oran, Constantinople, Marseilles, Toulon, have set up booths and shops, at which liqueurs, spirits, and French and country wines can be purchased at prices not intolerably high. The natives have followed the example. Strings of German sausages, of dried tongues, of wiry hams, of bottles of pickles, hang from the rafters of an old Turkish khan, which, but a few days before, was the abode of nothing but unseemly insects; and an empty storehouse has been turned into a nicely whitewashed and gaily painted "Restaurant de l'Armée d'Orient pour Messieurs les Officiers et nous Officiers." The names of the streets according to a Gallic nomenclature, painted in black on neat deal slips, are fixed to the walls, so that one can find his way from place to place without going through the serpentine wanderings which generally mark the stranger's progress through a Turkish town. One lane is named the Rue Ibrahim, another Rue de l'Hôpital, a third Rue Yunuf; the principal lane is termed the Coso, the next is Rue des Postes Françaises; and as all these names are very convenient, and have a meaning attached to them, no sneering ought to deter the English traveller from confessing that the French manage these things better than we do. Where is the English post office? No one knows. Where does the English General live? No one knows. Where is the hospital to carry a sick soldier to? No one knows. Does any one want to find General Canrobert? Ask the first Frenchman you meet, and he will tell you to go up the Coso, turn to the right, by the end of the Rue de l'Hôpital, and then you will see the name of the General painted in large letters over the door of his quarters. The French Post-office and the French Hospital are indicated sufficiently by the names of the streets. Our Sappers and Miners have done useful works by the sea-side, have built piers, trenched up the shore, and deepened the little harbour. The French have done the same. They have built piers and banked up the shore, and erected a sea-wall to land at. Lord George Paulet has been inexhaustible in his hospitalities on board the *Bellerophon*, and has done much to "amalgamate" the high officers of both armies by his friendly *réunions*, so that they become better friends every day. There is no jealousy between the men, or any rivalry, except in the path of honour.

THE ENGLISH CAMP AT ALADEEN, NEAR VARNA.

Never were tents pitched in a more lovely spot. When the morning sun has risen and dissolved the rich landscape of foliage-covered hills and broad downs, and lake and river with its light, it is scarce possible for one to feel he is far from England. At the other side of the lake, which leaves the meadows beneath the hill on which the camp is placed, there is a range of high ground, so finely wooded, with such verdant sheets of short crisp grass between the clumps of forest timber that every one who sees it at once says "surely there must be a fine mansion somewhere among those trees!" Once the traveller leaves the sandy plain and flat meadow lands which sweep westward for two or three miles from Varna, he passes through a succession of fine landscapes, with a waving outline of hills, which he can see on all sides save the thick mass of scrub or cover, fenced by the road, or rather the track, made by the horsemen and arabe drivers. The open country is finely diversified, and abundance of wood and water lies all around, within easy distance of the route. Long lines of storks fly over head, or hold solemn reviews among the frogs in the meadows. As for the latter they are innumerable, and their concerts by day and night would delight the classical scholar who remembers his Aristophanes, and who can test the accuracy of the chorus. Eagles soar overhead looking out for dead horses (the noble bird is not above eating carrion), and vultures, kites, and huge buzzards scour the plains in quest of vermin, hares, or partridges. Beautiful orioles (a blaze of green and yellow), gaudy woodpeckers, jays, and grosbeaks, shriek and chatter among the bushes, while the bulbul (the nightingale) pours forth a flood of plaintive melancholy from the brake, aided by a lovely little warbler, in a black cap and red waistcoat with blue-ish facings, which darts about after the flies, and which, when he has caught one, sings, lights on a twig and expresses his satisfaction in a gush of exquisite music. Blackbirds and harsher jays join the chorus, and birds of all sorts, fit around in multitudes. The commonest bird of all is the dove, which is found so good to eat that his coocy is often abruptly terminated by a dose of No. 6. A small kind of deer has been seen close to the camp, in herds of fifty or sixty, and the sportsmen have found out the tracks of wild boar through the neighbouring hills. Hare carp abound in the lake, and very fine perch, enormous bream and pike, can be had for the taking; but tackle, rods, and lines are very scarce in the camp. There are no trout in the waters, but perch and pike take large flies very freely, whenever the angler can get through the weeds and marshy borders to take a cast for them.

The camp life is quiet, and soon told: between six and half-past six o'clock the seven regiments parade, each in front of their own encampment; but nearly two hours before that time, the straggling noises of the sounds of the camp, if he has been able to sleep through the challenges of the sentries along the lines and the monotonous cry running from man to man, "Number One, All's well!" "Number Two, All's well!" &c., will be awaked by the bugles and trumpets sounding the réveil. The noise of conversation around his tent, and the chopping of wood for the camp fires. Parade over, there is a general rush for breakfast, which takes place at eight o'clock. The meat (beef) served out for rations is good, though very lean; and the supply preserved potatoes most acceptable. Sir J. Brown will not allow the porter which has been sent up to Varna for the use of the troops to be forwarded to the camp; but if the men had rations of weak spirits and water, it would be better for them than their beer. As it is, they get neither, and the heat accordingly (the thermometer is great; but perhaps it does not much exceed the average temperature of a fine sunny day in England, about the same time of year) is one to which they are not accustomed, and which they feel severely. When all is sounded, and all the regiments playing, the silence which reigns over the camp would be profound, but that the vigorous breathings of the sleepers frequently attain the dimension of snoring; and that the challenge of the sentry to the stragglers for half an hour are frequent. Fatigue parties are appointed, and relays are sent out about half past two o'clock in the morning. These pickets are posted around the camp at the distance of two or three miles.

THE TREATY OF ADRIANOPLE DESPATCH.

The despatches from the Duke of Aberdeen to Lord Ponsonby respecting the treaty of peace between Russia and Turkey, signed at Adrianople on the 14th of September, 1829, is a document of so much importance at the present moment, that, but for its length, two columns of the *Times*—we should have given it entire.

After some preliminary remarks on the professed policy of Russia, his Lordship proceeds to examine the conditions of the treaty of Adrianople, which, he remarks, appear wholly to affect the interest, the strength, the dignity, the present safety, and future independence of the Ottoman Empire." The territorial acquisitions of Russia, he admits, are small; but they are "commanding positions, far more valuable than the possession of barren provinces and depopulated towns, and better calculated to rivet the fetters by which the Sultan is bound." The Asiatic fortresses, for example, "not only secure to Russia the uninterrupted occupation of the eastern coast of the Black Sea, but place her in a situation so commanding as to control at pleasure the destiny of Asia Minor." Thus she has advanced into the very centre of Armenia—thus holding the keys "both of the Danube and the Turkish provinces; and, whether she may be disposed to extend her conquests to the east or to the west, to Teheran or to Constantinople, no serious obstacle can arrest her progress." "In Europe, the Principalities of Wallachia and Moldavia are rendered virtually independent of the Porte," while the effect of the stipulations respecting the Islands of the Danube must be as he remarks, "to place the control of the navigation and commerce of that river exclusively in the hands of Russia."

Having commented on other provisions of the treaty equally objectionable, and dwelling at some length on the precarious condition of the Ottoman Empire, Lord Aberdeen winds up by saying that the anxiety felt by the other European Powers, on account of "the unavowed views of the Russian Government," is greatly increased by finding that fresh causes have been brought into action, by the treaty of Adrianople, "which are obviously calculated to hasten and ensure its utter dissolution. The evils attending upon uncertainty, expectation, and alarm, must be greatly felt throughout Europe. Encouragement will be afforded to projects for revolution, the general tranquillity and the different Powers, so far from disarming, will probably augment their warlike preparations, already too extensive for a state of peace." This latter sentence shows that the Premier was in favour of reducing the national armaments of Europe long before Mr. Cobden took up that question; and that at that time he looked upon Russia as the greatest promoter of war.

THE BALTIC FLEETS.

Letters from Finland, of June 21, state that the united fleets of England and France—comprising twenty-eight sail of the line, five first class frigates, and eighteen steamers; in all fifty-one sail, were then at anchor, off the island of Renskar, in Baro Sound; affording a spectacle, the grandeur of which in a naval point of view, it is more easy to conceive than describe. There fly the flags of the two Great Maritime Powers of the world, who have cordially united in one common cause, that of avenging the unprincipled aggression of Turkey by the despot of the north of Europe.

On the 16th ult., the day after the junction of the two fleets, Sir C. Napier, accompanied by Rear-Admirals Corry and Chads, paid an official visit to Vice-Admiral Parseval Deschênes on board the *Inflexible*, 90, the yards of all the French ships being manned, and their crews giving three hearty cheers. The French Admiral having signified his intention to return the visit on the following day, the captains of the various English ships repaired on board the *Duke of Wellington* at an appointed hour, to be present on the interesting occasion, and as a mark of respect to the senior officer of the French fleet, who received compliments similar to those given the day previously to our gallant Commander-in-Chief.

During the forenoon of the 16th, the ships of the English division of

---

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Deanery*: The Hon. and Rev. G. Wellesley to Windsor, with the registry of the Knights of the most noble order of the Garter thereunto annexed. *Precentorship*: The Rev. B. Heathcote to Salisbury Cathedral. *Rectories*: The Rev. H. Atkinson to Edermine, Wexford; Rev. E. Bowen to Little Wigborough; Rev. H. B. Burlton to Farway, Devon: Right Rev. T. Carr (late Bishop of Bombay) to Bath; Rev. H. W. Coventry to Woolstone, Gloucestershire; Rev. J. Griffiths to St. Fagan's, near Cardiff; Rev. J. F. Linyham to Lambeth. *Vicarages*: The Rev. M. Austis to Cubington, Warwickshire; Rev. C. Hensley to Cabourn, Lincolnshire; Rev. J. T. Oldrini to Beeston, near Nottingham; Rev. H. F. Seymour to Barking, Essex. *Incumbencies*: The Rev. J. Chapman to St. Peter, Bolingbroke; Rev. E. C. Hubbersty to Carlmel, Lancashire; Rev. S. R. Tucker to Castle Northwich, Cheshire. *Perpetual Curacies*: The Rev. J. Chamney to Meigh; Rev. G. W. B. Daniell to Martin, Wilts.

AN EPISCOPAL DILEMMA.—The Bishop of New Zealand, who is now in England, attended a general meeting of the Church Missionary Society last week, and after recommending a plan for the subdivision of his diocese, announced his intention of appropriating the whole of his annual income, namely, £800 a year, towards the endowment of the new See. On Monday night last Sir George Grey, the new Colonial Secretary, announced the determination of Government to discontinue the annual allowance of £600 hitherto made by vote of Parliament to the Bishop. The right rev. prelate's income was £1200 a year, derived from these two sources, so that he is now left without a shilling of regular stipend.

Two of the curates of St. Paul's, Knightsbridge, have resigned their appointments, and returned to the Bishop of London their licenses, on account of circumstances arising out of the late ecclesiastical disputes in that district.

PENSIONS ON THE POST-OFFICE REVENUE.—From a return to the House of Commons it appears, in the year ended the 5th of January, the following payments were made:—To his Grace the Duke of Marlborough, £4000; to his Grace the Duke of Grafton, £3407 10s.; and to the heirs of his Grace the Duke of Schomberg, £2800.

DINNER BY THE SHERIFFS TO THE JUDGES.—On Tuesday evening a banquet was given at Girdlers' Hall, Basinghall-street, by the Sheriffs of London and Middlesex, in honour of her Majesty's Judges. Mr. Alderman and Sheriff Wire and Mr. Sheriff Wallis presided, and alternately proposed the various toasts which were honoured during the evening. The company included Vice-Chancellors Stuart and Page Wood, Mr. Baron Parke, Mr. Baron Alderson, Mr. Justice Williams, Mr. Alderman Humphery, the Hon. and Rev. Mr. Legge, Sir John Shelley, Bart., M.P., &c.

the fleet went to general quarters, firing shot and shell at targets moored at distances of 800 and 1000 yards. The *Porcupine*, steam-sloop, Lieut.-Commander Jackson, was dispatched to Stockholm, to procure fresh provisions.

The *Gorgon* was dispatched on the 18th to Svesborg, returning the next day to the anchorage of the fleet. The *Bulldog* and *Alban* arrived in Baro Sound on the 19th, from a cruise; the *Penelope*, 16, and French war steamer *Milan*, paired company on particular service. The boats of the various ships comprising the British division of the fleet, manned by the seamen, marines, and marine artillerymen, and armed with field pieces, carbines, revolvers, &c., landed at the island of Ranskarn, under the command of Rear-Admiral Chads, transported the field-pieces over the rocks, fired three rounds of blank cartridges, and performed various military evolutions.

It was probable that a portion of the Allied fleets would proceed up the Gulf of Finland as far as the island of Hogland, in a day or two, and make a demonstration off Cronstadt. There was no prospect, however, of any active operations being undertaken.

THE GAMLA CARLEBY AFFAIR.

By letters from the Baltic fleet, of June 20, we have received a more accurate account of the melancholy affair at Gamla Carleby. It appears that after the crews of some of the steamers of Admiral Plumridge's division had destroyed the shipping and marine stores in Ulesborg and Brahestad, in the Gulf of Bothnia, the *Vulture* and *Odin* approached Gamla Carleby (Old Carleby), on the evening of the 7th ult., but could not get nearer than about four miles and a half, as they drew too much water for the narrow creeks leading to the town. The *Vulture* and the *Odin*, in fact, although the former is only a six-gunner, were unable to render any assistance to their officers and crews for using the expedition, and hence, in a great measure, the deplorable loss of life.

About seven p.m the boats of the two steamers were manned and armed —there being in all nine boats, two pinnaces, two paddle-box boats, four cutters and one gig, with 160 officers and men; the entire expedition being under the command of Lieut. C. A. Wise, of the *Vulture*, who was accompanied by Lieut. Madden, Lieut. Burton, of the Royal Marine Artillery, and by Dr. Duncan, all of that steamer. The boats were then rowed towards shore, and, after a long pull, anchored near the storehouse at the entrance of one of the creeks leading to the town. Lieut. Wise and Lieut Burton went on shore—a flag of truce having been previously displayed and communicated with the Burgomaster. The other boats remained about half a mile distant. Lieut. Wise demanded the delivery up of all the ships in the harbour and all the Government property, promising, in case of compliance, not to molest the town or the inhabitants. He and his men, however, were not allowed to enter Carleby, although he offered to go unarmed, and declared that he merely wished to ascertain whether there were any Government stores in the place. Whilst Lieutenants Wise and Burton were holding a parley with the Burgomaster of Old Carleby, the latter had at his side a military-looking person in plain dress, no doubt a high Russian functionary, as the Burgomaster and the other municipal authorities appeared to be guided by his advice. To the twice or thrice repeated question whether there were any Russian troops in or near the town no answer was given, and that silence was considered by Messrs Wise and Burton as significant. The latter observing, after pushing off from the shore, "We shall have certainly have a fight."

Lieut. Wise having returned to the boats forming the expedition, the flag of truce was withdrawn; some boats were sent ahead for the purpose of sounding, and the others followed closely. One of the boats of the *Odin* was ordered to reconnoitre one of the creeks leading to the town; on passing near some buildings the boat's crew perceived a number of soldiers, an turned back in order to report the discovery. That moment, however, a temporarily raised wall was thrown down, and a volley of musketry was poured into the boat, killing Lieutenant Carrington; Mr. Montague, mate; and Mr. Athorne, a midshipman; and wounding Lieutenant Lewis, R.M., and Mr M'Grath, midshipman, as well as fourteen seamen and marines. The boat itself was disabled, and was towed by another one to the *Odin*, which was still lying in the roads. The other boats, which had on board four 24-pounders, howitzer and two light field-howitzers, immediately opened fire, one gunner of the *Vulture* boats excellent firing not less than twenty-seven times before he fell wounded. The fire was steadily maintained on shore, but the boats, with the exception of one belonging to the *Vulture*, were soon rowed out of range. The unfortunate exception was one which got aground in the creek. It was distinctly seen it was disabled, and drifting with the current. By this time the number of the enemy had greatly increased, and it was calculated that there were not less than 800 riflemen. There is some obscurity, or rather diversity, of opinion as to the fate of the missing boat. Some think a shell burst right over it, killing or wounding all in it; others, that it got aground on the piles in the creek, and that it was captured by the enemy. In that boat—which was the paddle-box boat of the *Vulture*—were Mr. N. L. Morphy, mate, and twenty-five seamen; and, in another boat belonging to the same steamer, one marine was killed and six were wounded; so that the entire loss of the two steamers in killed, wounded, and missing, was 52. In one boat alone—of 18 persons, less than 11 were killed or wounded. In the beginning of what may be called the action, the enemy had only one field-piece; but, towards the close, they had trained up five.

The firing from the Russian troops lasted an hour and ten minutes, and had the elevation of their guns been too high, the loss on the side of the English would have been still greater. Moreover, the Russians commenced firing too soon; had they waited until the boats got further into the creek, and then opened their volley, not a single Englishman, it is calculated, would have escaped. One of the boats of the *Vulture* was pierced in numerous places with grape shot, and had two of her oars broken

One Russian cavalry officer and an infantry one were seen to fall, and many Russians were wounded. After the firing was over, the enemy set to work making breastworks and stockades, fearing probably that the assailants would return. Next day a regiment was drawn to the shore, and the people on board the *Vulture* and *Odin* set it down as a detachment of the Imperial Guards. Previously to the departure of the *Vulture* from its fellow sufferer, the officers of the former assisted at the interment of the killed of the *Odin*, and the ceremony was a deeply affecting one. All the boats' crews behaved with the utmost intrepidity and coolness and the expedition was ably commanded

CAPTAIN GIFFARD'S WIDOW.—The widow of the lamented Captain Giffard visited Odessa, in the *Penwiras*, under the safeguard of a flag of truce. She was permitted to land, accompanied by Captain Powell, and remained there twenty-four hours collecting particulars of her husband's dying moments, which were those of a hero desirous to the last for his country's cause. The crew of the *Tiger*, on seeing a British naval uniform pass their place of confinement, were about hailing the wearer with a British cheer, thinking their moment of deliverance from captivity had arrived, but were very judiciously silenced in time by a sign from Captain Powell. The junior officers, such as midshipmen and cadets, have been placed in a naval college to improve them in their profession; the seniors are said to have been removed to Moscow, the Emperor having refused to listen to any exchange.

ACCIDENT TO THE "HIMALAYA."—As the large screw steamship *Himalaya* was steaming up the Solent, by Hurst Castle, on Wednesday evening, in endeavouring to clear a brig she touched the shore opposite the Castle, and it being an ebb tide, she was obliged to remain until next evening, when she was once more afloat with very little injury.

THE *Tonning*, which sailed on Sunday from Portsmouth with twenty-three Dragoons of the 6th Enniskillens and fifty-six horses, takes on board thirty-eight men saved from the *Europa*; so that in a few days the regiment will be in the East, complete in every detail notwithstanding the recent melancholy disaster. She also had 20 men for the Fifes the Rifle Battalion. It is intended to complete to 1000 rank and file the six regiments forming the 1st division, under the command of the Duke of Cambridge. The regiments of General Sir Lacy Evans's division will also be made up to the same strength, and before the end of next week an addition of 3700 bayonets will have been made to the infantry force in the East; the twenty-five battalions thus posted amounting to 25,000 rank and file, and the entire army consisting of 30,300 effectives.

RUSSIAN agents having tried to excite differences between the Greeks and the soldiers of the Anglo-French army of occupation, General Kalergi, the Minister of War, has thought it right to publish a proclamation, intended to re-assure the country as to the benevolent intentions of England and France, in sending their troops to combat a policy condemned by the whole of Europe.

GERMAN SURGEONS FOR THE BRITISH FLEET.—The *Independance* of Brussels publishes, on the authority of its Hamburg correspondent, the extraordinary statement, that owing to the want of surgeons in the English ships in the Baltic, endeavours have been made within the last few days in various German towns to engage practitioners with the stipulation of good pay.

FOREIGN AND COLONIAL NEWS.

FRANCE

(From our own Correspondent.)

PARIS, Thursday.

The resignation of M. de Persigny of the post of Minister of the Interior is the principal event of the day; and the appearance of his official report in the *Moniteur* excites much interest and attention, more especially such portions as relate to the changes effected in the administration of the public press, since it has become dependent on the Ministry of the Interior. Under the former organisation, the Préfets being at liberty to use their own discretion in giving *avertissements*, an ill-directed and over-jealous zeal was displayed, and a degree of rigour employed which become daily more intolerable. As it is, we have our own opinion on the state of the press present with respect; but we must admit that a certain amelioration has been produced under M. de Persigny's administration. At present the following journals lie under *avertissements* given since last year:—*La Constitutionnel*, one *avertissement*; *La Patrie*, two; *La Presse* (the journal of the largest circulation in Paris), one; *L'Estafette*, one; *L'Union* and *Ami de la Religion* (both religious journals), one each; *L'Echo Agricole*, one; *Le Journal des Economistes*, one; and the *Assemblée Nationale*, suspended for two months, and now revived. Our readers are doubtless aware that the third *avertissement* is the signal for the suspension of a paper—final or temporary, as the Government may decide. The *Moniteur* publishes a most flattering letter from the Emperor to M. de Persigny, on the occasion of his retiring, in which he expresses his sense of the long and valuable services of the Minister in his private and public character, and his regret at his quitting the post he had filled so much to his Majesty's satisfaction. In conclusion, he bestows upon him, as a mark of his "particular satisfaction," the Grand Cross of the Legion of Honour. M. and Mme de Persigny have started for Switzerland, intending to make a tour for the benefit of the health of the late Minister

The military post obtained by Hon Mazo, in Asia, has caused considerable dissatisfaction to the Generals engaged in the Algerian campaign, and the appointment once met with some degree of opposition on their parts, but it has nevertheless been confirmed

The organisation of the corps of the *cent gardes* is completed, and the whole body is assembled at Versailles, where the various uniforms of the regiments from which they have been drawn—that they are to wear not being yet adopted—produces a most singular and pretty effect

The works at the Palace of the Elysée are proceeding with the utmost activity, and a long gallery for the personal suite of the Emperor is being constructed along the front which looks on the Faubourg St. Honoré. As it will be overlooked by the houses on the opposite side of the street, it is expected that these will be pulled down. A petition has been presented to the Emperor by a large number of the inhabitants of three of the *arrondissements* of Paris, that the Rue de Rivoli may be prolonged as far as the Barrière du Trône. At the same time, and in the same course of works, it is proposed to create a new Boulevard similar to the Boulevard de Strasbourg, to bear the name of Napoléon III.—30,000 signatures are said to be appended to the petition

An intention is spoken of, of establishing prizes for the best books appearing within a year, whether published in the libraries, magazines, or editions of the principal journals

The funeral of Mdlle. Rebecca Felix, sister to Mdlle. Rachel, took place last week. In order to testify the regret felt in the theatrical and literary circles for the premature loss of a most promising actress, the Théâtre Français closed for a night, and all the artists of the theatre besides some of the principal illustrations of the literature of the day—such Jules Janin, Théophile Gautier, Paul de St. Victor, Amedée Achard, Méry, Mallard de Lyonne, Edouard Thierry, &c.—attended the funeral; and M. Samson and M. Jules Janin each pronounced a valedictory panegyric over the tomb.

A few words on the musical intelligence of the day. Meyerbeer is gone to Berlin, but promises to return in the autumn to produce his new opera of the "Africaine," at the Académie Imperiale de Musique, already do the wise ones declare *monts et merveilles* of the work of the maestro, the *reprise*, whose "Robert le Diable," with Cruvelli, has, for the last ten days, been drawing crowded houses, they say, to attend the farewell; however, remark, in parenthesis, that Cruvelli's performance of *three* characters, in the midst of traits of beauty and genius, all the defects which have so often been noticed in her performances, and which seem rather to increase than to diminish: a total want of unity—all these mark the exception of every rule conducive to taste and render her to real connoisseurs, very incomplete and imperfect artist. The Prince de la Moskowa, whose musical talents have long been acknowledged, not merely in the *salons*, but in the artistic world, has composed an opera, which has been composed and executed between the performance of his functions as a senator and soldier. The Prince has confided his work to the manager of the Opéra Comique, where it is to be brought out as soon as the necessary preparations can be made. It is said the Moskowa will probably join the Eastern expedition, in the event of a fresh envoy of troops. A new march, entitled the "Occidentale"—which is said to be a very fine composition is, we are told, being studied by all the bands of the garrison of Paris, and is to be shortly performed on the Boulevards, by some hundreds of musicians. The Déassemens Comique announces the appearance of a piece, in four acts, bearing the singular title of "Aventures d'un Jeune Homme de Quatre Mois;" followed by a great work in eight tableaux, "Les Métamorphoses de Grandville, ou les Animaux Peints par eux-même." Fifteen dramatic writers are engaged in the execution of this piece.

UNITED STATES.

The *Asia* steam-ship, which left New York on the 14th ult., arrived at Liverpool on Sunday morning. The popular excitement on the subject of slavery still continues. President Pierce and several officials had been hung in effigy at Westfield, Mass., by the Abolitionists During the ceremony the church bells were tolled. The Judge of the Wisconsin Supreme Court had declared the Fugitive Slave-law unconstitutional, and refused to convict.

On the 9th ult the Rev. T. W. Higginson was arrested at Worcester and conveyed to Boston, charged with being engaged in the riot at the court-house when Batchelder was killed. He was held to bail in 3000 dols. The rev. rioter, who, when asked to subscribe funds for the purchase of the slave Burns, replied that he "had nothing but brains and bullets to bestow," is yet at large.

Later accounts from Texas represent the ravages committed by the Indians during their late forays to have exceeded anything heretofore experienced. Great destruction is reported to the crops on the Brazos by the overflowing of the banks of that river.

Advices from Havanna to the 8th ult. had been received, detailing the plan of operations resolved upon by the Cuban Government in the event of the descent of an armed force upon the Island; but it does not differ materially from the course pursued towards the party of General Lopez.

THE OVERLAND MAIL.

Letters from India and China have been received by the Overland Mail. The dates by this arrival are:—Calcutta, May 16th; Madras, 21st; Hong Kong, 6th; Singapore, 15th; Penang, 18th; Galle, 26th; Bombay, 23rd; Burmah, 3rd.

The news from India is not of much importance; but, in the absence of anything surprising in the Presidencies, the correspondence of the *Delhi Gazette* continues to furnish our Oriental contemporaries with an unfailing supply of marvels from Central Asia. The *Gazette* has now a new correspondent," who has discovered that—

The Russian troops have not only reached Khiva, but have built several forts within its territories. The Khan found himself unable to resist, and deemed it best to close an alliance with the Emperor of Russia, the more so since in doing so he followed the example of Persia It is also reported in Cabul that the King of Bokhara has allied himself with Russian agents, to induce Ameer Dost Mahomed Khan to enter into friendly negotiations. The Ameer, however, refuses to have any intercourse with his Majesty of Bokhara; but does not absolutely refuse to treat with the Czar through the agency of Persia.

To complete the mystification, we are told that Nazir Khairoola Khan had written to Dost Mahomed, informing him of persons sending news to the English papers, which might produce much mischief. "The consequence was that Mirza Nubbee was seized on suspicion of being the news-sender, but was dismissed, after clearing himself by oath." The *Friend of India* makes the very probable suggestion that these correspondents of the *Delhi Gazette* may be agents used by Dost Mahomed, in order to increase the value of his offer of amity to the British Government.

From China we have reports that the Emperor *de jure* of the Celestial Empire is about to divide the kingdom with Tsae-ping-Wang, the insurgent chief, but the rumour is not generally credited At Nankin the insurgents are settling down, and assuming the character of a settled Government Shanghai still holds out against the Imperialists, and appears likely to do so. At Amoy preparations were going forward for another endeavour on the part of the insurgents to retake the city, which, if vigorously followed up, will probably be successful.

THE COURT.

The King of Portugal and the Duke of Oporto left Buckingham Palace on Monday morning, to make a tour of the manufacturing districts.

His Royal Highness Prince Albert inspected the Essex Rifles in Hyde-park on Monday morning. In the evening, the Queen and the Prince honoured the Princess's Theatre with their presence.

On Tuesday the Queen, with Prince Arthur and the Princess Louisa, took a drive in an open landau and four. In the evening her Majesty and the Prince Consort honoured the Royal Italian Opera with their presence.

On Wednesday the Queen and Prince Albert, with the Prince of Wales, Prince Alfred, the Princess Royal, and the Princess Alice, went to the Egyptian-hall, Piccadilly, and honoured Mr. Albert Smith's entertainment, "The Ascent of Mont Blanc," with their presence. Her Royal Highness the Duchess of Gloucester visited her Majesty at Buckingham Palace, on the same day. In the afternoon, the Queen, accompanied by the Princess Mary of Cambridge, took a drive in an open landau and four

On Thursday the Earl of Aberdeen had an audience of the Queen, at Buckingham Palace. The Prince Consort, accompanied by the Prince of Wales, went to Harrow at half-past twelve o'clock, to be present at the annual delivery of speeches. In the evening the Queen and the Prince honoured the Opera Comique with their presence.

The Duke of Devonshire has sufficiently recovered from his recent attack to remove to Brighton. His Grace takes daily carriage exercise.

The Marquis of Lansdowne gave a grand concert on Monday evening, at Lansdowne House. Their Royal Highnesses the Duchess of Cambridge and the Princess Mary honoured the noble Marquis with their company.

THE ENTERTAINMENTS AT OXFORD

RENOWNED as the city of Oxford has ever been for its hospitality, and for the liberal spirit which has characterised those who have filled the office of Chief Magistrate, it has been the particular study of the present Mayor (R. J. Spiers, Esq.) to place his native city in a still prouder position in those respects. On Tuesday, the 22nd ult., a banquet was given at the Town hall, which, in point of elegance and splendour, far surpassed the ordinary style of corporation entertainments. On this occasion, in addition to his corporate friends and fellow-citizens, the Mayor had invited the leading members of the University and county gentry—including Sir H. Peyton, Bart.; the High Sheriff; the Right Hon. J. W. Henley, M.P.; Mr. J. H. Langston, M.P.; the Right Hon. E. Cardwell, M.P.; Mr. G. Harcourt, M.P., &c

On Thursday evening the Mayor and Mayoress had a reception in the Town-hall, which we have illustrated upon the next page

In addition to the evening party on Friday, the seniors, under the able and gentlemanly direction of the Mayor and Mr. John Henry Parker, were conducted over the Colleges of Worcester, St. John's, Wadham, Architectural Society's rooms, Bodleian Library, Theatre, and Divinity School. The company were then sumptuously entertained in the common room of Christ Church, by Mr Stokes, the Junior Proctor.

At Magdalen College, the company were entertained at dinner by the Senior Proctor, Mr. Cholmondeley; the fine old President, Dr. Routh—now in his ninety-seventh year—having granted the use of the Hall for the occasion. Dr. Routh took advantage of this opportunity to present to the College a handsome silver-gilt dish, which he had received as a gift from the Emperor Alexander of Russia, in the year 1814 And the Vice-President, Mr. Harris, in announcing the presentation of the piece of plate, made a most ingenious speech in which he pointed out no occasion could have been more appropriate for giving and accepting the offering. He pointed out how the present Emperor of Russia was conducting a system just the opposite to that maintained by his grandfather's predecessor. "Alexander," he said, "manfully defended his country against the lawless aggressions of the greatest despot the world ever knew, and therefore deserved the esteem of every true patriot; but Nicholas, the present Emperor, had committed the very crimes which had been punished by his brother" The President could not, on account of his great age, be present at the entertainment; but the window was opened, in order that he might hear the hearty cheers with which his host finally said kindness were greeted

In the evening Dr. Daubeny, the Professor of Botany, gave a soirée at his residence

THE ILLUSTRATIONS.

The *Antique Gallery*, which we engrave, forms a part of the Randolph and Taylor Buildings, in Beaumont-street. At the foot of the staircase is a beautiful statue of Bacchus, presented by a Countess of Pomfret; opposite, in a niche in the side wall, is a statue of Minerva, in good preservation; and through the archway, with its columns on either side, are seen a number of antique statues, arranged in niches. In the centre is the torso of Theseus; and, in the extreme distance, the Laocoon. In this Gallery there is a part devoted to the works of Chantrey; and also, in the vault beneath, are to be seen many models of his mural monuments.

The *Schools Gate*, so named as leading to the Divinity Schools, is represented as seen within the Quadrangle, and is a curious specimen of architecture, and more pleasing from its picturesqueness than elegance of style. This is the principal entrance, on state occasions, into the Divinity Schools and Theatre. The front, facing the street, is very bare of decoration.

The *Reception by the Mayor and Mayoress* in the Town-hall on Thursday evening was brilliantly attended The invitations were extended to 1000 The object of this gathering was to bring again together the most distinguished members of the University, the county gentry, and the citizens, and to place before their notice works of art, rare literary works, and other objects calculated to gratify intelligent curiosity, and afford intellectual enjoyment. In this object the Mayor and Mayoress most eminently succeeded.

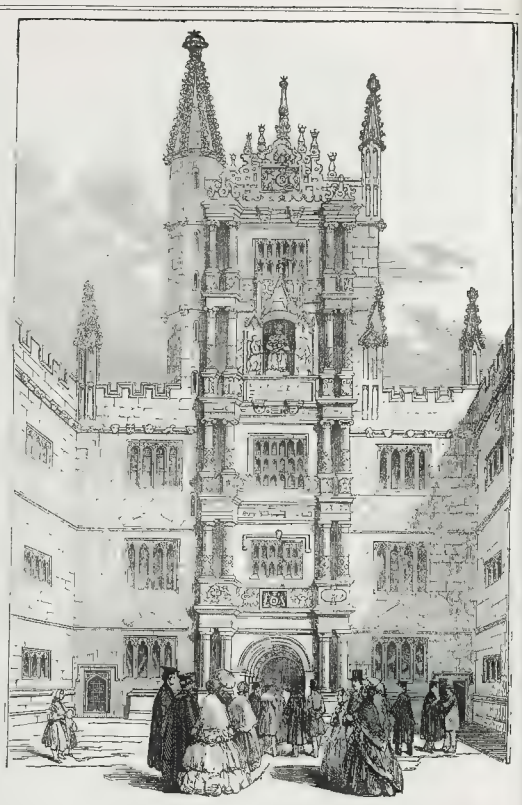
The Town-hall presented a most brilliant appearance, for around its walls were hung some of the choicest works of Millais, Hunt, Collins, Ansdell, Allom, Frost, D. Cox, and others illustrious in art; while on stands in many parts of the room were ranged a collection of water colour drawings, by some of the most distinguished artists of the present day. In the various recesses and in the centre of the room were models of the most finished pieces of sculpture by Calder Marshall, Macdowall, and others, imparting a degree of grace and beauty to the scene which could not be surpassed.

Soon after eight o'clock the company began to assemble. The list of guests included many of the most distinguished names in literature, science, and art. As they arrived they were introduced by Stewards to the Mayor, who then introduced them to the Mayoress, and she, as well as the Mayor, gave to each a cordial welcome. About ten o'clock the whole of the company had arrived, and, notwithstanding that upwards of 1000 persons were congregated together, there was an entire absence of confusion and pressure, owing to the excellent arrangements laid down, and the admirable manner in which they were carried out by the Stewards, who undertook, as a labour of love, the duties which were assigned to them.

In the great hall, the draperies of the windows and the heraldic adornments of the walls, as arranged for the banquet on Tuesday, had been retained, superadded to which, that spacious apartment was ornamented throughout by a profusion of painting and sculpture. In the Council-chamber there was a collection of drawings of the ancient masters, copies of the Queen's collection and stereoscopes; in the City Committee-room, microscopes, drawings, carvings, &c.; in the Public Library a collection of illustrated books and other works of art—including some of the finest works of modern eminent artists, besides productions of others more immediately connected with the locality. The Microscopic and Stereoscopic Department was superintended by F. Symonds, Esq., and the Rev. A. Wood, who attended during the evening and explained the various illustrations; and the Fine Arts Department was attended by Mr. Harvey, to whom much of the credit of the general arrangement is due.

The Town-hall-yard was covered with a spacious tent, in which refreshments were dispensed. The Public Library was crowded during the night with parties examining the beautifully illustrated works, lent for the occasion by the Architectural Society, other public bodies, and private individuals. The musical department was sustained

THE ANTIQUE GALLERY, TAYLOR AND RANDOLPH-BUILDINGS, OXFORD.

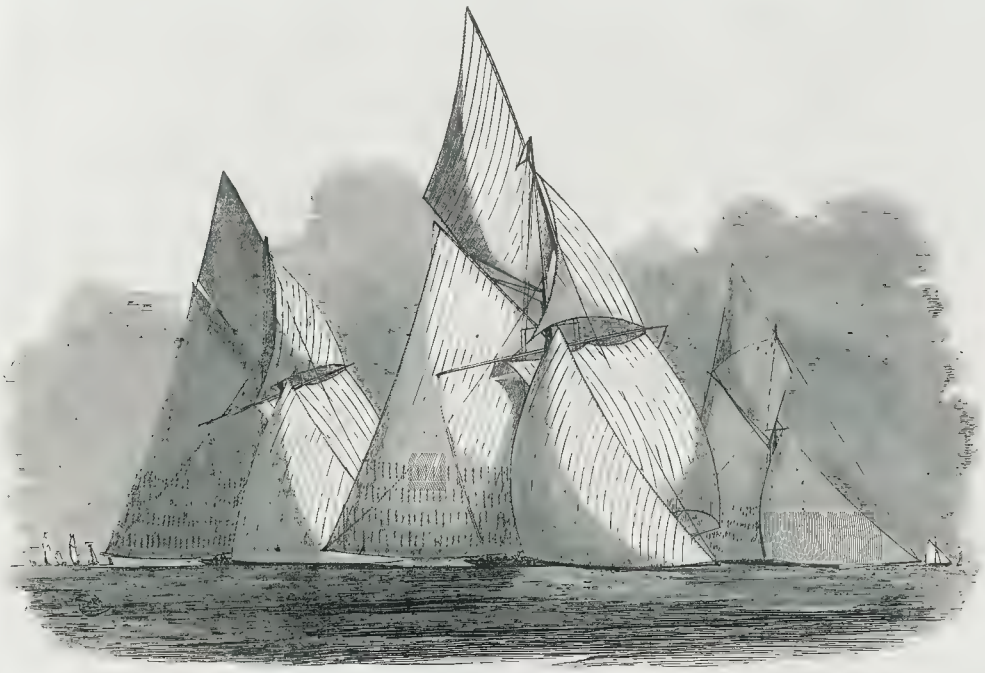


THE DIVINITY SCHOOLS GATE, OXFORD.

by Adams's new Oxford Sax-Tuba band; and the vocal, by the Misses Birch, aided by amateurs, choristers, and others. The hall and other apartments were brilliantly lighted, and the *tout ensemble*, when the company had assembled, was extremely rich and imposing. The invitations exceeded 1000 in number, comprising the resident families of the University, with those of the county, the city circles, &c.

On the two following days the hall and other apartments were visited by upwards of 20,000 persons, including schools, some accompanied by banners and bands of music.

THE RECEPTION, BY THE MAYOR AND MAYORESS, IN THE TOWN-HALL, OXFORD.—(SEE PRECEDING PAGE.)



THOUGHT. PHANTOM. VAMPIRE.

THE ROYAL LONDON YACHT CLUB MATCH.

M. BILLAULT, MINISTER OF THE INTERIOR UNDER LOUIS NAPOLEON.

M. ADOLPHE BILLAULT, the new Minister of the Interior under the Emperor Napoleon III., was born in the year 1805. He began his career as an advocate at Nantes, where he became so distinguished for his eloquence and industry, that he was nominated a member of the General Council of the *Loire Inférieure*. But M. Billault was destined

M. BILLAULT, MINISTER OF THE INTERIOR.

to shine in a higher sphere. In 1837 he was elected a member of the Chamber of Deputies. M. Billault then, for the first time, gave the measure of his faculties. He proved himself to be a man of the most varied talents, which accommodated themselves to all political questions. He became in a short time one of the most indefatigable orators of the Chamber of Deputies: civil and military affairs, finance, diplomacy—on all these questions he spoke in the most masterly manner. On his first entrance into Parliamentary life he attached himself to that section of the Opposition known under the name of the "Constitutional Opposition," and of which M. Odilon Barrot was at that time the leader; but in 1840 he went over, "*sans transition*," to the side of M. Thiers, and was shortly afterwards made Under-Secretary of the Department of Agriculture and Commerce. On the downfall of the Administration of M. Thiers, he joined the Opposition against M. Guizot, and was one of the most troublesome opponents of that Minister. M. Billault was one of those men who denounced the English predilections of M. Guizot. He took part in the debates relative to the famous "Right of Search," carried on for the amusement of the *badauds* of Paris; as well as in those excited by the conduct of the French at Tahiti, when the celebrated "*affaire Pritchard*" threatened to bring England and France into collision; and when the French press teemed with accusations against "perfidious Albion."

In 1847, M. Billault spoke with much force on the question of Electoral Reform; and, after the Revolution, was elected Representative of the People in the Assemblée Constituante. This portion of the political career of M. Billault is distinguished by vacillations of principle that do not say much for the earnestness of his convictions. He was the ardent promoter of the proposition of inquiry into the condition of the working classes, and defended the absurd "right of labour" question against M. Thiers. His Republican zeal led him to moot and support the most dangerous questions; and he became the champion of the National Assembly in the differences that arose between the majority of that body and Louis Napoleon, at that time President of the French Republic. This devotion had its reward. He was first made a member of the Provisional Committee of the Council of State; and subsequently, on two different occasions, he was named one of the Vice-Presidents of the National Assembly.

It was with no small astonishment, therefore, that the public, after the establishment of the Empire, received the intelligence, that this ancient disciple of M. Odilon Barrot, this confederate of M. Thiers, and opponent of Louis Napoleon, was promoted to the important position of President of the *Corps Legislatif*. In this capacity, however, he appeared to have given satisfaction, and his promotion to the Ministry of the Interior has not excited surprise or much remark from any section of politicians.

The character of M. Billault is thus described by M. de Cormenin, in his "Sketches of the Parliamentary Celebrities of the Reign of Louis Philippe":—"M. Billault has as much principle as most advocates, and more than many Ministers of our day. He is a remarkable orator."

ROYAL LONDON YACHT CLUB MATCH.

THIS event, the second and concluding match of this Club for the season, was sailed for on Tuesday, the 20th ult. The competitors were but three: the *Thought* and *Phantom*, in one match, and the *Vampire*, unopposed, in the other; and all three cutter-rigged.

Yachts.	Tons.	Owners.
Thought	32	G. Cooper, Esq.
Phantom	29	S. Lane, Esq.
Vampire	18	C. Wheeler, jun., Esq.

The course, on this occasion, was from Erith to the Nore-light and back, for a purse of forty sovereigns for the first-class, and a purse of thirty sovereigns for the second-class vessels. The *Mars* steamer—always

PARIS FASHIONS FOR JULY.—(SEE NEXT PAGE)

excellently worked above, and well-provisioned below—with the band of the Royal Artillery, accompanied the match.

The starting gun was fired at thirteen minutes to twelve, and the vessels got under way beautifully, the *Vampire* leading. There being no restriction as to what canvas the vessels might carry, or how used, as upon former matches in the Thames, the vessels mounted all their large canvas; the *Thought* and *Phantom* carrying square sails in addition to the ordinary ones—a novelty in a yacht match; but the rules of the Club most judiciously allow the vessels to make the most of the wind blowing on the occasion. The appearance of the yachts with this crowd of canvas was most beautiful, the hulls of the vessels being at times almost hidden by the immense jibs they carried. The yachts were each, for their size, the most celebrated craft afloat; and, in the early part of the match, were together for some time; but the *Phantom* gradually increased the distance between herself and the other vessels, and they arrived at the Nore Light as follows:

	H.	M.	S.
Phantom	3	16	15
Thought	3	30	30
Vampire	3	31	25

At this point the *Phantom* shortened sail, and still continued to drop the other vessels. Off Southend the *Thought* took the ground, and had to be towed off by the *Mars*, which assistance disqualified her for gaining the prize, even could she again by sailing have overtaken her celebrated rival. The *Phantom* arrived at Erith at sixteen minutes to eight, and the *Vampire* at one minute past eight.

The successful competitors, Mr Lane and Mr. Wheeler, then came on board, and the Commodore presented the prizes in the usual manner; the two victors returned thanks; and the health of the Queen and the ladies being responded to, the *Mars* returned to London with her visitors, much gratified with the attention paid to their comforts, and the general excellence of the arrangements.

PARIS FASHIONS FOR JULY.

Our duty this month is rather to describe what should be worn at this season, than to describe the toilets worn; for the unpropitious weather has kept in the shops the charming dresses that would otherwise have been displayed out of doors.

Scotch plaid sarcenet is the material most worn for silk dresses; the ground is generally plain, and of a light colour; the lines of the squares are composed of very small narrow close stripes of showy colours; and separate stripes pass through the middle of the large square. A great many muslin dresses are made with coloured embroidery; very few running patterns are worn, small separate designs, spots, stars or very small flowers dotted on the plain ground, sometimes lozenges or squares are woven on the material, of the same colour as the ground, when the embroidery is made to match the figures of the dress. Book-muslin is worn with the same sort of ornament; the favourite colours are blue, lilac, pearl-grey, of the lightest shades; above all, white is worn. These dresses are generally made with three flounces; the petticoat is separate from the body, as it serves for ball-dresses in the country, as well as for walking-dresses; for the evening a body of a similar material is made plain with a point, and without *basques*; low, with short sleeves, for the ball; during the day, it is replaced by a *canezou*, either of black lace, or white muslin, with trimmings of sarcenet ribbon of the same colour as the stars or flowers embroidered on the petticoat. The morning caps worn with these dresses should be trimmed with ribbons of a colour similar to that of the dress; they are embroidered in amour-stitch (*point d'armures*), or with lace insertions or in guipure stitch (*point de guipure*), or with the fancy embroidery, which completely imitates lace. The mantillas are also made of muslin, entirely covered with embroidery in satin-stitch, and trimmed with lace; they are short, in the form of a scarf behind, and the two points in front are round. Silk mantillas are made of light-coloured sarcenets; white is preferred, as it may be worn with every shade; they are stamped with open patterns, and the openings are embroidered in satin-stitch, which produces a charming effect; and are completed with a single row of fringe, with a guipure footing. A few China crape shawls are still seen; but only those that are embroidered with brilliant colours, and very much embossed. White shawls, embroidered in white, are gone out of fashion. Some very light printed barège shawls have been also made, with India patterns for the borders, and are well suited for this season.

THE ILLUSTRATIONS.

No. 1. *White Muslin dress*, with three flounces; the large running patterns at the bottom of the flounces are also white, like the ground of the dress; the spots dotted on the muslin are pink, or blue, according to taste; the body of a similar material, is plain under basques, trimmed with sarcenet ribbon of the same colour as the spots, the inside of the collar open in front, is trimmed with Valenciennes lace; the cap and the sleeves, made of embroidered muslin, are trimmed with the same lace.

No. 2. *Scotch plaid sarcenet dress*: plain body, fastened at the top, trimmed with ribbons, which form braces, of the same colour as the large stripe of the squares.

No. 3. *Black barège dress*, with flounces trimmed with a ruche.

No. 4. *Pearl-grey watered poplin dress*, a printed barège shawl; white crape bonnet, ornamented with flowers.

METROPOLITAN NEWS.

Note. The sign + denotes above the average, and the sign — below the average.

The corrected reading of the barometer decreased from 30.11 inches at the beginning of the week to 30 08 inches by the 23rd; increased to 30.11 inches by the 24th; decreased to 29 61 inches by the 26th; increased to 29.76 inches by the 27th; and decreased to 29.56 inches by the end of the week. The mean for the week, at the height of 82 feet above the level of the sea, was 29.806 inches.

The mean daily temperatures have varied from 7·3° above, to 5·4° below their average values. During the time they were below their average values, viz., from May 22 to June 22, the mean defect was 3·7°.

The mean temperature of the week was 61·3°, being 0·2° below the average of 38 years.

The range of temperature during the week was 33°, being the difference between the highest reading of the thermometer on the 25th, and the lowest on the 29th.

The mean daily range of temperature during the week was 16·9°. The greatest was 22° on the 26th, and the smallest 5° on the 28th.

Rain fell during the week to the depth of three-tenths of an inch.

The weather, during the first four days of the week, was fine and warm; during the rest of the week it was showery and changeable.

Lewisham, June 30, 1854. JAMES GLAISHER.

HEALTH OF LONDON.—Within the week ending June 24 the births of 1682 children were registered: 829 were boys, and 803 were girls, exceeding the average of the same week in nine years by 127 males and 146 females. The number of deaths within the week was 1153—of these 563 were males, and 590 females; exceeding the corrected average of the same week in ten years by 40 males and 114 females.

ANNIVERSARY OF HER MAJESTY'S CORONATION.—Wednesday being the anniversary of the coronation of her Majesty, at an early hour the bells from the steeples of the various metropolitan churches sent forth merry peals in honour of the occasion. At one o'clock a grand *feu de joie* was fired from the guns in St. James's Park, the Tower, the Royal Arsenal, Woolwich, and Tilbury Fort. The vessels and numerous steamers on the river also were decorated with flags and streamers in honour of the occasion.

ELECTION OF SHERIFFS.—The annual election of Sheriffs and other officers who are chosen on Midsummer-day, took place in the Guildhall on Saturday last, when Alderman Muggeridge and Mr. Charles Decimus Crosley were duly elected, and the return was made to the Court of Aldermen, who at once confirmed it. Sir John Key was unanimously elected Chamberlain for the ensuing year.

CALENDAR FOR THE WEEK.

SUNDAY, July 2.—3rd Sunday after Trinity.
MONDAY, 3.—Dog days begin. J. J. Rousseau died, 1778
TUESDAY, 4.—St. Martin.
WEDNESDAY, 5. Sovereigns first issued as currency, 1817.
THURSDAY, 6.—Old Midsummer-day. Adam Smith died, 1790
FRIDAY, 7.—Thomas à Becket's scandal-ated, 1170.
SATURDAY, 8.—Fire Insurance due Edmund Burke died, 1797.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JULY 1, 1854

THE Law of Partnership, though, at first glance, a dry legal question, is a subject of great importance, not so much to the legal profession, as to the public generally, and amongst the public, especially to the small capitalist and struggling tradesman. Everybody knows that, according to the present state of the law, capital cannot co-operate with talent or industry by going into a limited partnership with it, that is by supplying a limited amount of capital to work upon; for the instant such an arrangement should be attempted, the capitalist would become involved for the whole value of his estate. As a natural consequence, the millionaire is very chary of having anything to do with such speculations; and, what then? He puts his millions into the Funds, and draws his three per cent with out risk and without advantage to any one single fellow-being. What is true of the millionaire is true also of the owner of a few hundreds—the savings, perhaps, of years: he cannot invest them as a limited share in partnership with larger capitalists in any ordinary commercial transactions. And why? The Triton and the Minnow cannot swim in the same sea; the man of pounds cannot work with the man of pence in the same field—where both pretending to a rateable return of profit, each is liable, in respect of all he possesses, for the other. And what, then, becomes of the small capitalist's hard-earned hundreds? They are too often invested in foreign Funds, or at home in some bubble joint-stock speculation, exempted by charter or Act of Parliament from the operation of the Partnership Laws; and, in nine cases out of ten, become sunk—swallowed up—irretrievably lost!

This is only the case in England—commercial England—where every encouragement ought to be given to honest enterprise, and the sympathy of capital for labour, and labour for capital Abroad exists a very useful system, that of partnership *en commandité*, whereby a certain number of persons registered as a trading partnership, and being themselves unlimitedly liable, may yet employ the capital of other persons, who are permitted to share the profits to the extent of the capital respectively contributed by them; and beyond that amount being held exempt from all responsibility. This system, first introduced into Italy, has spread into France, Holland, Germany, and finally to America, with the most beneficial results to the parties engaged. Furthermore, under its influence, trading firms, established in foreign parts, have extended their branches into England, engrossing many important departments of trade, to the utter exclusion of British capital and industry.

Having briefly glanced at some of the more prominent evils of the present state of the law, it is with much satisfaction that we announce the probability of its being altered, before very long—not in this session, certainly, but possibly in the next. Two Committees and a Commission have already deliberated and reported upon the subject; and, although their opinions are not unanimous, the declaratory motion of Mr. Collier in the House of Commons on Tuesday last, was met with such an expression of concurrence both from members of the Government and from the House generally—being itself in the end affirmed without a division—as not to leave a doubt as to the result. Of course, in the new law, whatever it be, provision will have to be made to prevent fraud, by duly registering the names of all partners, and the account of their shares; but, this being done, capital, great and small in amount, will be left to trade and develop itself freely; and we have no doubt that, amongst other advantages, a more genuine system of credit and of trade transactions generally than any that has hitherto prevailed will be the consequence.

WHILE the Bill for the Reform of the Universities of Oxford and Cambridge is dragging its tortuous length through the House of Commons, another species of reform has been inaugurated in the city of Oxford, under promising auspices. Though the ancient feuds and fights between "Town and Gown" have happily become matters of history, it cannot be said that Town and Gown in Oxford have entirely forgotten their former jealousies. A remnant of the old feeling still subsists, but with greatly diminished intensity, and every year that passes tends to obliterate it, and to remove from the mind of both classes the impression that the other is not as worthy as itself of respect and honour. To cement this good understanding, and to lead to its extension, appears to have been the object of the Mayor of Oxford in inviting to that city, during the past week, to partake of his civic hospitalities, a large number of persons well known in the world of art, of science, and of literature. It was a matter of considerable interest to ascertain whether the University would receive with distinction the guests of the municipality. The result was in the highest degree gratifying. So far from treating with neglect, or even with indifference, the ladies and gentlemen who had been honoured with the Mayor's invitation, the Heads of Houses and Colleges adopted every possible method of showing them attention and respect. The reception at the Town hall was one of the most brilliant gatherings ever seen at Oxford; and the principal functionaries of the various Colleges vied with each other in supporting the Chief Magistrate of the city in his recognition of that outer literature, science, and art, which have their seats in London; and the students and undergraduates the most distinguished for their rank, wealth, and social position, eagerly claimed the distinction of acting as stewards on the occasion. Nor did the University authorities confine their sympathy to the festivities of one evening, but threw open their venerable Colleges during successive days; some of them doing the guests the rare honour of receiving them uncovered at the entrance, escorting them through the halls, libraries, and gardens; and bidding them farewell, personally and collectively, with as much distinction, as if an honour had been conferred upon the University by the visit. In former days the Universities were reproached with being ignorant of the actual life around them, and of existing in an atmosphere of antiquity, that often disqualified them for companionship with the busy and bustling world of modern civilisation. Whatever truth there may have formerly been in the imputation, there is little in it at the present time; and such social gatherings as those of which Mr. Spiers has set the example will, if imitated, remove all pretext for the allegation. The past glories of the Universities are among the most precious remembrances of the British people; and anything that tends to increase their present popularity, and to extend their usefulness, must be considered in the light of a public benefit. The "Town and Gown" antagonism—no longer existing in Oxford—was but a type of the antagonisms that, at no very distant period, prevailed throughout the country, and that separated class from class by an almost impassable barrier of mutual jealousies and dislikes. Our civilisation has been gradually breaking down these bonds, and though some of them still remain to reproach us—such, for instance, as the antagonism between large employers and their workpeople, and the still more unchristian demarcation between masters and servants, in which the feelings, sympathies, and modes of thought of each class are almost as distinct as those that separate the white men from the negro in the United States of America—the lines of separation are gradually growing fainter. For these and other reasons we are glad that the city of Oxford has made so fortunate a movement. Perhaps, at some future day, the University will still more emphatically testify its approbation, by returning the compliment.

THE Society of Arts, Manufactures, and Commerce will open an Exhibition for the Encouragement of Education, by a *conversazione*, in St. Martin's Hall, on the evening of the 4th inst., when his Royal Highness Prince Albert, the President of the Society, will attend. The Exhibition will be opened to the public on the 6th July, and remain open till the 20th of September. The Hall will be filled with models, maps, diagrams, apparatus, books, and other articles relating to education, contributed by the friends of instruction, not only in the United Kingdom, but in the most enlightened countries of Europe and the United States of North America. Lectures will be delivered, and discussions held, at suitable hours, illustrative of the objects exhibited, and of the systems of education recommended or followed in different countries and districts. The price of admission will be so low that the practical teacher may study there without encroaching perceptibly on his income. The Committee of the Society have expressed a desire that landowners, magistrates, and benevolent individuals all over the United Kingdom interested in schools, should second their efforts to render the Exhibition generally useful, by organising local committees to collect funds to send the common schoolmasters of the country to London for a week to visit the Exhibition; and we hope that they will admit such teachers free. Every one conversant with the state of education in the United Kingdom, must be aware of the low quality of the instruction given in most of our common schools, and also of the imperfections in the modes of teaching. There are numerous exceptions highly creditable to particular teachers; still a large mass of ill-informed men are in possession of our public seminaries, and it has been found difficult to rouse them to improvement. No means, in our opinion, could be devised better calculated to produce this effect than sending the schoolmasters to visit the Exhibition, and converse with the enlightened persons whom they will find there, examining the objects and methods with a view to their practical adoption. The country schoolmaster, unaccustomed to mingle freely in the educated society of his district, and confined to the routine of communicating the simplest elements of instruction to children who leave school before their intelligence has had time to awaken, has few motives for self-improvement; and when books calculated to help him forward in his art are presented to him, he feels small inclination to study or apply them. Were he to pass one week in London, and to visit this Exhibition daily, he could not return and sit down contentedly to follow the dull course of his previous life. If there was a spark of mental energy within him, it would be awakened, and he would desire to advance. Besides, he would have learnt how much other men know of education and its appliances, and no visitor could enter his school without his being led to think that "probably this stranger has seen the London Exhibition, and will try me by its tests."

Were the railway directors of the United Kingdom appealed to, we have good reason, from their conduct on previous occasions, to anticipate that they would second the efforts of the local committees, by reducing their fares in favour of teachers visiting the Exhibition.

The Crystal Palace, the British Museum, the National Gallery, and other institutions of the metropolis, also, are highly calculated to give an impulse towards self-improvement to the schoolmaster.

NOTES OF THE WEEK

THE POLICE BILL.

We are sorry to observe that Lord Palmerston, yielding to senseless and interested clamour, has announced his intention of abandoning his County and Borough Police Bill; or, at any rate, of sacrificing its most essential and useful features. The heart that Russia could not soften, nor Austria beguile, has quailed before the "bureaucracy" of Manchester, Birmingham, Chester, and a deputation of county wisdom. We dare to say we have as exalted a notion of a provincial mayor, or a bench of justices, as Lord Palmerston, and that we fully share his views as to the "great advantages which arise from the cordial and harmonious co-operation of the local authorities with the Administration;"—but what if efficiency require something more than all this? The opposition to this attempt to establish an efficient police force throughout the country, has consisted chiefly of the old cry against "centralisation," the old generalities about "self-government," and so forth. Centralisation! is not the Post-office establishment one of centralisation? The Exchequer? Are not the railways, the electric telegraph, centralisation? the administration of the law by the Judges on Circuit centralisation? the whole Sheriff system centralisation? And why should not the mere executive function of thief-catching and crime-prevention have the operative efficiency and uniformity of action result ing from centralised organisation also? With the management or micromanagement of purely local affairs—those which especially concern the health, cleanliness, comfort, and decent appearance of local communities, and the dis osal of their special funds, and small patronage—we would not, for an instant, think of interfering; but the repression and punishment of crime is a national, and not a local question, and the machinery employed for the purpose should be commensurate with the requirement, and co-extensive with the field over which it acts or ranges. We do not wish to disparage the good intentions of local authorities in this matter; but it has long been too notorious, that the police forces maintained by them, are neither numerous enough, nor sufficiently "up to their work," to be of any use with the metropolitan police, or against metropolitan thieves. The consequence is that crime in its most atrocious and alarming forms, scared away from the range of the London authorities, ravages peaceful suburban quarters, and quiet provincial towns, to the scandal, not only of the immediate neighbourhood, but of the community at large; and immediate powerless are the local functionaries to detect the criminal, that in cases of very flagrant character the London policeman has to go down to investigate the matter, to fix upon the culprit, and materially assist in the matter of the conviction. The recent supply the necessary chain of evidence for his conviction. The recent atrocious murder case near Slough was one of many similar, where from the stupidity of the rural tipstaff, the murderer was allowed, under his very nose, eight-and-forty hours to make away with the evidence of his guilt, and was within an ace of escaping the gallows in consequence. And yet in the face of such facts as these, borough dignitaries and county magistrates boast about independence, self government, &c., and loudly deprecate any interference of central authority. We regret that we are sorry that Lord Palmerston has given up what he persists in believing, and that we join with him in believing, to be a good measure, from deference to such prejudices as these.

HAMPSTEAD-HEATH.

It appears that we, last week, reckoned without our host.—" cried before we had got out of the wood" — when we gave credit to the House of Lords for sufficient consistency, and, we may add, sufficient sense of justice, to reject, for the sixth time, as they had on five occasions previously, the modest pretensions of Sir Thomas Maryon Wilson to enclose Hampstead-heath, in defiance of his fathers will, and the solemn decisions of the Judges upon the law and merits of the case. The "Finchley-road Estate" Bill was read a second time on Tuesday. No one denies that Parliament has the right, in its discretion, to grant powers of life estates powers to the right, in its discretion, to grant powers of life estates powers to grant long leases, for building or other purposes, which they would not otherwise be able to do; but it does so only in cases where it is for the benefit of the estate, and where there is no ground to the less obvious one, that the leasing power is granted with the intention of the donor that it should be exercised by the life interest was made. Now, in the case of the late Sir T. Wilson's will, there is every reason to presume that he did intend to withhold such powers in respect of Hampstead-heath because while he gave power to the tenant for life to grant leases not to certain and many portions of his estate, he, in the very same instrument, omitted to do so as to that particular portion. As to the motives which induced him to make the exception, we are not bound to inquire; though Lord Campbell, in the course of debate, went so far as to suggest, that he had done so "cautious-ly, and as he believed from motives of patriotism and benevolence"—a suggestion which was, to their great credit, received with "laughter" by the House of Lords.

We are simply pleased and grieved at the result. We blush for the bard, mercenary feeling which can set the sacred associations of the past and the most innocent aspirations of the living—the fond associations of childhood, recreation, at defiance, for the benefit of a few. Shame, also, heathful recreation, at defiance, for the benefit of a few. Shame, also, heathful recreation, at defiance, for the benefit of a few. Shame, also, heathful

OPENING OF THE CRYSTAL PAL

AT SYDENHAM.—(SEE NEXT PAGE.)

OPENING OF THE CRYSTAL PALACE.

UPON the two preceding pages we have engraved the scene of the impressive ceremony of the Opening of the Crystal Palace, on June 10, by her Majesty, in person. Happily, in this enlightened age, Sovereigns are accustomed to lend the grace of their presence to the pageants of peace, as well as to the pomp and circumstance of war. In our Journal of last week we illustrated the inauguration of a railway in Brazil by the Emperor and Empress of that country; and to-day we present a scene of kindred interest in our own country. Both the railway and the Crystal Palace are the triumphs of our own times; and, although both works have a national importance and character, still they are private enterprises, emanating from the people themselves, but not, on that account, less worthy of Royal countenance. Such was the opening of the Crystal Palace at Sydenham, on the 10th ult. The details of the very interesting ceremony were given in our Journal of June 17. The point selected by our Artist, in the prefixed Illustration, is her Majesty reading her gracious reply to the Address of the Directors. On the right of her Majesty are the Royal children and the Prince Consort. To the left of the state chair are the King of Portugal, the Duke of Oporto, the Duchess of Kent, and the Court. Upon the floor of the building, at the foot of the dais, is a crowd of the representatives of foreign Powers, in their varied brilliant official costumes.

The Directors of the Crystal Palace Company have been honoured by the following very gratifying expression of her Majesty's opinion as to the mode in which the inaugural ceremonies were conducted:—

Whitehall, June 20, 1854.

Gentlemen,—It is with much satisfaction I inform you that I have received the Queen's commands to convey to you the high approbation of her Majesty and of his Royal Highness Prince Albert of the admirable manner in which everything was arranged and conducted on the occasion of the opening of the Crystal Palace at Sydenham, on Saturday, the 10th inst. The Queen has been pleased to express the especial gratification she derived from the very magnificent music which was performed; and has graciously signified her opinion that it had the finest effect which her Majesty had ever heard.

I have the honour to be, gentlemen, your obedient servant,

PALMERSTON.

The complimentary allusion to the music is unusually strong; but those of the public who had the honour of participating in her Majesty's gratification will freely admit that the Royal expressions by no means exaggerate the merits of Signor Costa, and the large and talented band, vocal and instrumental, by whom the music of the Opening Day at the Crystal Palace was executed.

The sum her of shilling visitors, which, on Monday, was 10,728, and, on Tuesday, 13 186, rose to 16 826 on Wednesday. The number of season-ticket holders, for the corresponding days, was 907, 1218, 1424. On Saturday last the number of 5s. visitors was 2883; of season-ticket holders, 5166; on Friday there were 4264 2s. 6d. visitors, and 1093 ticket holders. The receipts in the Refreshment department continue to increase also, and the arrangements appear to give general satisfaction. A time-table has been issued for the starting of trains to and from the Palace, which prevents unnecessary delay. In other respects the working of the establishment steadily improves, and there seems no reason to doubt that a prosperous and brilliant career awaits the enterprise of the Company. Between the money taken at the doors and in the refreshment department, the receipts cannot be less than £1000 per day, so that the financial prospects of the undertaking are highly encouraging. A considerable amount of work is still carried on, both in the Building and in the Park, without any inconvenience to visitors. Thus, Mr. Owen Jones has been enabled to complete the Court of Lions, with its gilded pillars and pretty flower-garden. The arrangements connected with the machinery in motion are also making rapid progress under Mr Fothergill, and it is expected that the fountains of the Nave and the Upper Terrace will be ready to play in a week or fortnight. The North Wing is now finished, and Mr. Henderson and Mr Cochrane will be able henceforth to give their undivided attention to the construction of the great water towers, which will differ materially in design from those at first contemplated, and add greatly to the architectural effect of the Palace. Although, in the lower portion of the grounds especially, a good deal of work still remains to be done, the additional expenditure required need not frighten the shareholders.

Next to the Refreshments, the Commercial department exhibits the most decided symptoms of success. The applications for space become daily more numerous, and those tradesmen who have been installed from the first are carrying on a flourishing trade. The agent for the sale of French moulin de rose informs us that he comes to the Palace and Mr. Rimmel, the perfumer, eighty pounds' worth of his odoriferous compounds. The latter paid last week £55 rent, being the quarter of his gross receipts—a fact pleasantly indicative both of the increase of his trade and of the moderate rate of his profits. Mr. Sandars, also, the representative of the Paris Chocolate Company, who pays an enormous rent, is entirely satisfied with his bargain, and his assistants at the various stalls are hardly able to supply the public demand for his chocolate. The stall for Irish bog oak ornaments has been twice exhausted, and various other *boutiques* announce an equal amount of prosperity.

NATIONAL SPORTS.

CARLISLE RACES.—MONDAY.

Corby Castle Stakes.—Lord Alfred, 1. Nelly Hill, 2.
Grand Stand Plate.—Gamelad, 1. Fair Helen filly, 2.

TUESDAY.

Cumberland Plate.—Aribbas, 1. La Belle, 2.
Trade-men's Plate.—Colsterdale, 1. Patience, 2.
Speculation Plate.—Fairthorn, 1. Mary Ann, 2.
Carlisle Stakes.—Rick, 1. Brother to British Farmer, 2.

WEDNESDAY.

Lottery Handicap.—Bobby horse, 1. Guiscower, 2.
Her Majesty's Plate.—Aribbas, 1. The Skinner, 2.
Commercial Travellers' Stakes.—Mary Ann, 1. Fairthorn, 2.

BIBURY CLUB RACES.—WEDNESDAY.

Sweepstakes of 50 sovs.—Ch f by Robert de Gorham walked over.
Bibury Stakes.—Cock Pheasant, 1. Garforth 2.
Champagne Stakes.—Lady Alicia, 1. Sancebox and Lambswool, 2.
Andover Stakes.—William Rufus, 1. Welshman, 2
Plate of 50 sovs.—Master Adam, 1. B f by Harkaway, 2.
Plate of 50 sovs.—Cardinal Wiseman, 1. Orpheus, 2.

STOCKBRIDGE—THURSDAY.

Two Year Old Triennial.—Bonnie Mord, 1. The Hind, 2.
Four Year Old Triennial.—Cobnut. 1. William Rufus, 2.
Three Year Old Triennial.—Andover, 1. Ivan, 2.
Stewards' Plate.—Hermit, 1. Little Davie, 2.

BEVERLEY.—THURSDAY.

East Riding Handicap.—Ann Eliza, 1. Cardsharper, 2.
Hull Stakes.—Sylvia, 1. Lord Alfred, 2.
Hunt Stakes.—Surveyor, 1.

WINCHESTER RACES.—FRIDAY.

Triennial.—Bribery, 1. Dan Cupid, 2.
Queen's Plate.—Aeneas, 1. Colonel, 2.
Hampshire Stakes.—Bribery, 1. Cleveland, 2.
Grange-park Stakes.—C. by Red Heart out of Reflection, 1. Saucebox, 2.

LATEST BETTING

GOODWOOD STAKES. 10 to 1 agst Hesspy; 12 to 1 agst Diana and Troa.
DERBY.—10 to 1 agst Bonnie Mord

NEXT WEEK'S RACES will open at Newmarket, on Tuesday, for three days, with the July meeting; the same day, and following one, the Worcester Races take place; and on Thursday and Friday the Lancaster meeting will be held.

GENTLEMEN OF MARYLEBONE CLUB *v.* GENTLEMEN OF ENGLAND.—This match was brought to a close on Tuesday, when the score was as follows:—England, first innings, 58; second innings, 166. Marylebone, first innings, 77; second innings, 85.

BAZAAR AT GORE HOUSE.—The noble institution devoted to the alleviation and cure of consumption shared the sympathies of a goodly assemblage of the fashionable world on Tuesday and Wednesday, at a BAZAAR originated in aid of the funds of the charity, and held on the grounds of Lady Blessington's once celebrated residence at Kensington. The Duchess of Sutherland, the Marchioness of Allesbury, the Countess of Jersey, Viscountess Combermere, the Marchioness of Hastings, and many other distinguished ladies, presided at counters, and carried on a thriving trade. The bazaar was much crowded, but the admirable arrangement of the marquees, under the superintendence of Mr. Edgington, prevented the possibility of inconvenience resulting, and the fête gave perfect satisfaction to all parties.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

LORD ABERDEEN'S EXPLANATION.

The Earl of ABERDEEN, with the view of removing certain misapprehensions as to the character of his speech in reply to Lord Lyndhurst, moved for the production of a despatch addressed by himself, when Foreign Minister in the Government of the Duke of Wellington, to Lord Heytesbury, our Ambassador at St. Petersburg, upon the subject of the treaty of Adrianople. The noble Earl declared that there was nothing in his speech which he had to retract or to contradict, though he readily admitted that there might be grounds for making further development of that which he had intended to say. He had said the other night that, however disastrous and prejudicial the treaty was to Turkey, Russia had acquired no territorial possessions in consequence of it. This he said in answer to the exaggerated and unfounded declarations of the extension of the Russian Empire since that period. It might be comparatively incorrect to say that she had acquired no extension of territory; but there certainly had been no extension to the degree asserted. At the same time he was not unaware of the value of the acquisitions made by the treaty in respect to the navigation of the Danube, and of several posts in Asia, small in extent, but of the highest strategetical importance. In proof of this the noble Earl read one paragraph from his despatch to Lord Heytesbury, which strongly condemned the proceedings of Russia in making these acquisitions; and mentioned, in reply to a question, that the despatch was dated the 31st December, 1829. With the treaty of Adrianople a change commenced in the policy of Russia. Had the Empress Catherine had the execution of it, Russia would probably have obtained great acquisition under it; but about that time it had been the policy of Russia to look for the extension of political influence rather than increased territory. The policy was to attempt the same object by different means, in order not to alarm the European Powers. It had been said that he had expressed his disbelief in Russian aggression. On this subject he had been misunderstood. He had expressed the greatest alarm at Russian aggression upon Turkey, and said that Turkey must be protected against it; but as to the danger of Russian aggression upon Europe, he had certainly expressed no fear, because he felt none; and he was inclined to feel less every day. Declining to reply to absurd and malignant personal imputations, he admitted that he had, perhaps more than any other person, striven to maintain peace, because it was a duty he owed to God and man to endeavour to avoid the calamities of war; and he had been told, in consequence, that, if he had such a love of peace, he was unfit to make war. But how did he wish to make war, now we were at war? Why, by carrying it on with the greatest vigour and determination, in order the sooner to secure the return of peace. And his colleagues knew that he had always been most ready to co-operate with them in the most active measures of hostility and warlike preparation. Nay, more; he had personally been more urgent than any other man for a speedy advance and concentration of the Allied forces to the north of the Balkan, in order to support the gallant army of Omer Pacha, and for enabling Austria to take a more effectual part in the war. This, perhaps, he ought not to have said, but it was the truth, and he had invariably pursued the same policy. Now that we were entered into the war—a war which he unequivocally declared to be perfectly just—it should, so long as he had anything to do with its conduct, be carried on in the manner best calculated to lead to a speedy, safe, and honourable peace.

The Marquis of CLANRICARDE reviewed at much length the Ministerial career of Lord Aberdeen from the date of the treaty of Adrianople, and through his connection with several different Administrations. Through all he declared that the noble Earl had shown himself the constant supporter of arbitrary power in every nation of Europe, a partisan of Russia, and an opponent of every national effort to obtain constitutional liberties wherever undertaken. The noble Earl had, on assuming the position which he now occupied, declared that the foreign policy of this country had not varied for thirty years past, however its execution might have varied. He (the Marquis of Clanricarde) differed from the noble Earl in this respect, and considered that the differences in our foreign policy during that period had been fundamental and differences of principle; and that, from the first—from 1829, when the noble Earl was at the head of foreign affairs, down to 1839, when again the noble Earl was in the same position—the noble Earl had been the consistent, the most zealous, and most earnest supporter of arbitrary Governments.

The Earl of ABERDEEN (with angry irony): Hear, hear.

The Marquis of CLANRICARDE: The noble Earl (he repeated) had been the supporter of all the arbitrary Powers of Europe, and at all times the advocate and adherent of the Emperor of Russia.

The Earl of ABERDEEN—(angrily)—Hear, hear.

The Marquis of CLANRICARDE: Yes! The noble Earl had, on every possible occasion, befriended those arbitrary Powers.

The Earl of ABERDEEN: No!

The Marquis of CLANRICARDE: The noble Earl cried no; but he would give the noble Earl some reasons for the statements which he made. He would refer back to the period of the treaty of Adrianople. The noble Earl had told their Lordships that he had regarded that treaty as disastrous; that he had written a despatch to our Ambassador at Constantinople about it. But what their Lordships wanted the noble Earl to tell them was, what despatch the noble Earl had written to our Ambassador at St. Petersburg about it (Hear, hear), before the treaty was signed (Loud cries of "Hear, hear"). Their Lordships wished to hear what steps the noble Earl had taken for the purpose of preventing the treaty from being signed (Hear, hear). The noble Earl had stated on a former occasion that the Russian Emperor, at that period, was in the position of a conqueror—virtually master of the country, and rapidly advancing on Constantinople. But the noble Earl, if he did not know at the time (as he ought to have known), certainly must know now that the contrary had been the fact—that the Russian General commanding at Adrianople had not above 16,000 men with him, of whom not above 5000 were effective, while the Turkish General was at no great distance with an army of 25,000 Albanians. So that, if the Turks had been furnished with the least information as to the true state of affairs, that disastrous treaty would never have been signed (Hear, hear). If the noble Earl, as the Foreign Minister of this country, had only held up his finger, the treaty need not have been concluded (Loud cries of "Hear, hear").

The Earl of ABERDEEN (ironically): Hear, hear (A laugh).

The Marquis of CLANRICARDE: What was the course the noble Earl had pursued? The Russian General of course allowed a short time to the Turkish General to consider whether he would sign the treaty, well knowing that if he refused to sign it his own game would be discovered; and when the treaty was taken to Constantinople the Minister of Turkey summoned to his councils the Ambassadors of Austria, Prussia, and England, and asked their advice; and what was the advice of the English Ambassador? Why, to sign the treaty—that treaty which the noble Earl now said was so disastrous (Loud cries of "Hear, hear"). Who was our Ambassador at that time? The late lamented diplomatist Sir R. Horton (who had shortly before displaced Sir S. Canning)—one who, doubtless, was the repository of the sentiments of the noble Earl on the subject at the time he offered to the Turkish Government that advice to sign the treaty of Adrianople (Hear.) And when the noble Earl referred to the period of the treaty of Adrianople as affording proofs of what his feelings were as to Russian aggression, let the noble Earl state what steps he took to prevent the treaty from being signed—(hear, hear), not talk about a despatch written after it was concluded (Loud cries of "Hear"). To the present Government he contended that the Prime Minister was an evil genius. Attributing to his influence the fact that Lord Palmerston was not made War Minister, though best fitted by abilities for the post, and called to it also by the public voice, Lord Clanricarde referred to the acknowledged talents of other members of the Ministry, all of whom also led sections of representatives in the House of Commons; and yet their combined forces had proved unable to save from defeat every measure of importance they brought forward (Loud cries of "Hear"). The paralysis of governing power resulted, he believed, from the presence of Lord Aberdeen. It was his own conviction that the continuance in office of the Prime Minister was contrary to the interests of the country; and the only reason why he did not propose a formal vote to that effect was the doubt he entertained respecting the further arrangements which such a vote, if successful, would necessitate.

Lord BEAUMONT asked as to the truth of a statement in the newspapers to the effect that Prince Metternich, at the request of his Sovereign, had sketched a plan for negotiations, which had been communicated to the noble Earl at the head of the Government?

The Earl of ABERDEEN said there was no truth in the rumour.

Lord BROUGHAM expressed his satisfaction at the speech of the noble Earl, but was afraid that as Russia seemed about to abandon the Principalities, Austria would consent to peace on that basis alone. He hoped that France and England were in no way committed to the same conditions as might be agreed at by Austria and Prussia.

The despatch was then ordered to be produced, and the subject dropped.

HOUSE OF COMMONS.—MONDAY.

EVACUATION OF THE PRINCIPALITIES BY THE RUSSIANS.

Lord J. RUSSELL said, it was stated in the public papers that the Russian Government had assented to the invitation of the Austrian and Prussian Governments to withdraw from the Principalities. No official intelligence to that effect had reached the Government; but it had that day received despatches from the Earl of Westmoreland, in which it was stated as certain from Bucharest, that the siege of Silistria had been raised.

OXFORD UNIVERSITY BILL.

The Oxford University Bill having been read a third time,

Mr. HEYWOOD brought forward a modified form of the resolution which was defeated on Thursday night, with the view of admitting Dissenters to take degrees at Oxford. By the amended resolution the tests of the Thirty-Nine Articles were not to be tendered to bachelors of arts, law, or medicine, who would have no votes in the government of the University.

After some discussion, the debate was interrupted by the SPEAKER, who intimated that, by the standing orders of the House, notice should be given of any clause to be moved on the third reading of a Bill. The hon. gentleman (Mr. Heywood) had so far changed his clause that it could not be considered to come under the notice which he had given if only single member objected.

After some discussion, it was arranged that notice should be given, and that the discussion should be renewed on Thursday next, Mr. Layard consenting to postpone his motion of want of confidence in the Earl of Aberdeen until Friday.

CONSTITUTION OF NEW ZEALAND.

On the order of the day for the House resolving itself into a Committee of Supply,

Mr ADDERLEY called attention to the conduct of the late Governor of New Zealand in delaying and partially frustrating the new constitution granted to that colony.

Mr PEEL urged the same defence for the Governor as he had formerly urged in reply to questions from Sir J. Pakington.

Sir J. PAKINGTON did not think these explanations satisfactory.

After some remarks from Sir G. Grey, the House went into Committee, and the discussion of the Estimates occupied the remainder of the evening.

HOUSE OF LORDS.—TUESDAY.

PROPOSED INCLOSURE OF HAMPSTEAD-HEATH.

The Marquis of CLANRICARDE moved the second reading of the Finchley (&c.) Bill, which he stated had been erroneously described as a bill for the purpose of enclosing Hampstead-heath. Nothing could be more absurd than to make such an allegation, as the bill was merely to enable Sir Thomas Wilson to build houses on the Finchley New-road, a place which had no more to do with Hampstead-heath than it had to do with the Regent's-park.

Lord BROUGHAM said, that in rising to move that the bill be read a second time that day six months, he, and those who with him opposed the bill, were not taking away the rights or the property of Sir T. Wilson, but were objecting to his encroachment upon the property and rights of others.

Lord CHICHESTER said that the will was made so long ago as 1806, when the property was not considered fit for building upon: but circumstances had greatly changed since then, and as no one would be injured by granting the power asked for, he thought it unjust not to grant it.

Lord CAMPBELL entertained the opinion which had been expressed by his predecessors. Lord Denman and Lord Tenterden, namely, that it would be contrary to the principles of their jurisprudence to pass the bill. If they passed this bill they might be called on to enclose Hampstead-heath on the same principle, for there was no difference between Hampstead-heath and Finchley-road.

Lord St. LEONARDS should vote for the second reading of the bill.

The Bishop of OXFORD was glad of the opportunity granting this *privilegium*. It was in the nature of a favour, and no injustice would be done by its refusal. To grant it would be an injury to the public.

The Earl of DERBY believed that Sir Thomas Wilson had never asked for power to build on Hampstead-heath himself, but on the neighbourhood. This bill related to an estate which was not even within view of Hampstead-heath; therefore, the right rev prelate's anxiety for the interests of the poor was misplaced.

On a division the numbers were—For the second reading, 24; against it, 31: majority, 23. The bill was accordingly read a second time.

The Witnesses Bill was read a third time.

HOUSE OF COMMONS.—TUESDAY.

THE EASTERN QUESTION.

Mr. LAYARD, referring to the notice he had given for calling the attention of the House to a speech attributed to Lord Aberdeen in the other House on Monday week, and adverting also to a second speech delivered there by him on Monday last, said he trusted that the latter speech would have the effect of removing misapprehensions from the public mind, and of confirming public confidence in the policy so ably, and with so much English spirit, carried out by Lord J. Russell and Lord Clarendon, and he thought he should be acting in conformity with the feeling of the House if he withdrew the notice he had given; but, considering the state of public affairs, he was of opinion that, before the close of the session, there should be some discussion in that House regarding our foreign relations, and some expression of its opinion upon the subject.

LAW OF PARTNERSHIP.

Mr. COLLIER moved a resolution, "That the law of partnership, which renders every person who, though not an ostensible partner, shares the profits of a trading concern liable to the whole of its debts, is unsatisfactory, and should be so far modified as to permit persons to contribute to the capital of such concerns on terms of sharing their profits, without incurring liability beyond a limited amount." The subject, he observed, was one of considerable importance, and he was anxious it should not be misunderstood, that, because it was taken up by a lawyer, it was a mere technical question. Briefly explaining the law of partnership in this country—which, although it did not absolutely prohibit limited liability, did so practically, unless sanctioned by Parliament or granted by charter from the Crown, he observed that the law was peculiar to this country; it was at variance with the civil law, and was not the law of foreign countries, where the *commandite* principle which had extended to the United States, was adopted. He denied that it could prejudice the farmers themselves, or the directors of the undertaking, or the public, and he argued against another objection, that it would damage the commercial credit of the country. He had great faith, he said, in the principle of unrestricted competition, the benefits of which had been not only demonstrated by argument, but verified by experience.

Lord GODERICH, in seconding the motion, strongly urged the evils and embarrassments which resulted from unlimited liability—a restriction which prevented engagements for beneficial industrial purposes. He contended that all our great works were carried on for the benefit of the wealthy classes, the humbler capitalist having no means of advantageously investing his gains. He thought that great social benefits would be derived from the proposed change.

Mr. CARDWELL cautioned the House against coming to an irrevocable decision before the whole of the information was before them, and he stated some of the difficulties in the way of the question and the conflicting opinions of the commissioners upon it, remarking that the opinion of the minority as well as that of the majority should be respected. They would carry the confidence of the community with them by not legislating except upon mature consideration.

Mr. LUCAS urged the special case of the condition of Ireland, and moved the addition of words to the effect that the modification of the partnership law was especially necessary in that country.

Mr. GLYN observed that the evidence recently presented appeared to have been obtained from one class only, that of the capitalist, and that it was to a certain extent class evidence, and not an expression of the opinion of the humbler orders of men of business, who would be greatly benefited by a change in the law.

Mr. MALINS regretted to gather from Mr. Cardwell's tone that he was opposed to an alteration of the law, and he bore professional testimony to the great mischiefs it occasioned.

Mr. GLYN admitted that the commercial law of the country was in a most anomalous state; but the evidence which had been taken did not satisfy him that the House had information enough before them to justify them in making the proposed change.

Mr. J. G. PHILLIMORE ridiculed the idea that the House had not suf-

ficient information upon a subject which had been under discussion so many years.

Mr. LEVESON GOWER, in an effective maiden speech, supported the resolution, expressed his opinion that the present age tended to association, the power of which was only beginning to be appreciated, and insisted upon the advantage of extending the benefits of association to honest and prudent men, instead of to gamblers.

Mr. Digby Seymour and Mr. Kendal supported the resolution.

Mr. BROWN considered that limited liability would be injurious to the credit of the country, and to the interests of the lower classes.

Mr. SOTHERTON suggested that, instead of the resolution itself, a bill should be brought in authori-ing loans for business purposes, on the principle of the French law of partnership *en commandite*.

The ATTORNEY GENERAL was a decided friend to the proposition; but the question was now brought under the notice of the House for the first time; and evidence was before them which they had not had time to consider. He recommended Mr. Collier to be satisfied with the attention the subject had received, and with the assurance that it should be fully considered by Government

Mr. NAPIER concurred in this suggestion.

Lord PALMERSTON also thought that the resolution should not be pressed to a division. It could not be expected that Government should rush to a decision, or should declare, without more time for consideration, which opinion they might ultimately feel it right to submit to the House.

Mr. RICARDO contrasted the frank statement of the Attorney-General with the evasive speech of Mr. Cardwell, and said that, as for alleging that a study of the report was necessary for a right understanding of the question, he had read twenty pamphlets, any one of which was worth a dozen of such reports.

Mr. CAIRNS urged that a division should be taken, in order to mark the point to which the House had come.

After a little more discussion, Mr. Lacy's amendment was added to the original resolution; and the latter, having been put, was agreed to without division.

HOUSE OF COMMONS.—WEDNESDAY.

On the order of the day for going into Committee on the Mortmain Bill, Mr. GREENE appealed to Sir Headlam to postpone the motion, no member of the Government being present.

Mr. HEADLAM declined to do this; and, after a discussion, and observations upon the absence of the law officers of the Crown, and other members of the Government,

Mr. MOWBRAY moved that the Committee be postponed until after the fourth order of the day should be disposed of.

On division this motion was carried by 74 to 5 – majority 19; and the postponement took place.

The Public Libraries Bill went through committee.

Mr. NAPIER, for Mr. Whitside, withdrew the Property Disposal Bill.

The Tithe-rent Charge (Ireland) Bill was postponed.

The fourth order having been disposed of in a few minutes, a fresh discussion arose as to proceeding with the Mortmain Bill in the continued absence of the Government. An unsuccessful attempt was made to obtain further postponement, and the House at length went into Committee, Mr. Headlam undertaking to postpone certain clauses to which it was understood that the Attorney-General was opposed.

In the course of the subsequent discussion two divisions took place, and, after disposing of six clauses, the Chairman reported progress, and obtained leave to sit again.

HOUSE OF LORDS.—THURSDAY.

The Right Rev. Lord Auckland, the new Bishop of Bath and Wells, took the oaths and his seat upon his elevation to the Episcopal Bench.

LEGISLATIVE COUNCIL (CANADA) BILL.

The Duke of NEWCASTLE having moved that their Lordships go into Committee on this bill,

The Earl of DERBY rose to move the postponement of the bill for the present session, on the ground that it was of too important a character (being no less than a measure to destroy the constitution of one of our most important colonies) to consider within the remaining few weeks of the session.

The Duke of NEWCASTLE expressed surprise at such an objection being made by the noble Earl, who, when at the head of the Government, framed a similar measure for the Cape of Good Hope.

After some discussion their Lordships divided, when the numbers were —For the Earl of Derby's amendment, 39; against it, 61; majority against the amendment, 24. The bill then passed through Committee.

HOUSE OF COMMONS.—THURSDAY.

The House met at twelve o'clock.

The West London and Crystal Palace Railway Bill was read a third time and passed.

The Common Law Procedure Bill went into Committee, when, after much discussion, clauses up to 37 were agreed to.

The Chairman reported progress at four o'clock, and the House adjourned until six o'clock.

THE NEWSPAPER-STAMP.

Mr. LUCAS (at the evening sitting) inquired whether the Government had decided on any step in reference to the Newspaper-stamp, in accordance with the resolution of the House?

The CHANCELLOR of the EXCHEQUER said that the question was under the consideration of the Attorney-General. The Government were not at present prepared with any bill upon the subject; when they were, due notice would be given to the House.

THE AUSTRIAN AND TURKISH CONVENTION.

Lord J RUSSELL, in reply to Lord D. Stuart, stated that intelligence had been received by the Government of the intended occupation of the Danubian Principalities by the Austrian troops, in conformity with the Convention recently entered into with the Sublime Porte; and that such a course would be adopted, whether the Russian army retired from the Principalities or not. The Government had not received any official information of the acceptance by Russia of the Austrian ultimatum; but as regarded the Convention between Austria and the Porte, England was no party to it.

COLONIAL CLERGY DISABILITIES BILL.

In reply to a question from Sir J. Pakington, Lord J. RUSSELL said it was not the intention of the Government to proceed with the Colonial Clergy Disabilities Bill this session.

OXFORD UNIVERSITY REFORM BILL

The adjourned debate on the third reading of this bill was resumed.

Mr. HEYWOOD renewed his motion, to add the following clause to the bill:—"From and after the first day of Michaelmas Term, 1854, it shall not be necessary for any person, upon taking the degree of Bachelor in Arts, Law, Medicine, or Music, in the University of Oxford, to make or subscribe any declaration, or take any oath, save the Oath of Allegiance, or any equivalent declaration of allegiance—any law or statute to the contrary notwithstanding."

Mr. E. DENISON seconded the motion.

After some discussion, the House divided, when the numbers were—For the additional words, 129; Against it, 139: Majority against the Government, 10 (Immense cheering).

The Bill then passed.

OUR FLEET IN THE GULF OF BOTHNIA

Mr. M. GIBSON called attention to the destruction of a large amount of private property at Uleaborg and Brahestedt, by Admiral Plumridge's squadron, and asked Government for an explanation.

Sir J. GRAHAM warmly justified the proceedings of the fleet, and stated that the despatches on the subject would appear in the *Gazette* of to-morrow (Friday) night.

HOUSE OF LORDS.—FRIDAY.

Lord St. LEONARDS called attention to the present state of business in the offices of the Masters in Chancery, and suggested certain alterations, which would simplify the process and lessen the expense to suitors. The noble and learned Lord condemned the proposed scheme for transferring the Testamentary Jurisdiction and the Divorce Causes to the Court of Chancery, which was already encumbered with a larger amount of business than it could satisfactorily perform.

After some conversation, the subject dropped.

The Divorce and Matrimonial Causes Bill passed through Committee.

The Gaming-houses Bill, and the Encumbered Estates (West Indies) Bill, also severally passed through Committee.

The Bleaching Works, &c., Bill was read a second time.

The Legislative Council (Canada) Bill was read a third time and passed.

HOUSE OF COMMONS.—FRIDAY.

Sir J. PAKINGTON called attention to the circumstances under which the allowance heretofore voted for the Bishop of New Zealand had been removed from the Estimates, and stated that the Bishop's salary had been abruptly stopped without any official notice having been forwarded to the Bishop or the Colony.

Sir G. GREY said that no disrespect had been intended towards the right rev. prelate, whose conduct was most disinterested, and in every respect praiseworthy. The fact was that the right hon. baronet had himself arranged that, if the original estimate of £10,000 were agreed to, it should be reduced to £5000 the following year, after which it was to disappear from the Estimates. The vote, upon this understanding, was agreed to. It did not now appear that the Estimates, if being considered that the colony of New Zealand was in a position to liquidate its own ecclesiastical expenditure. The Colonial Government were perfectly competent to take upon itself the payment of the Bishop's salary.

In reply to Colonel Blair, Lord PALMERSTON said, it was not his intention to have the Scotch militia embodied this autumn, as it would only take the men away from their various occupations for no good purpose.

In reply to Mr. Massey, Lord PALMERSTON said, he should move to discharge the order for the second reading of the Police Bill. He hoped to bring in another bill upon the subject in the course of the present session.

Lord D. STUART, in the course of an amusing speech, drew attention to the want of accommodation for the members of the House of Commons in the House of Lords, and hoped the Speaker, or the First Commissioner of Works, would make some representations upon the subject.

Lord R. GROSVENOR said, that when he went to hear Lord Aberdeen's speech, a few evenings since, he had to go down upon his knees—so incommodious was the place (Laughter).

THE EDUCATION VOTE.

The House went into a Committee of Supply, and

Lord J. RUSSELL made a statement as to what had been done in promoting the education of the people, and stated that it was not the intention of the Government to introduce any measure for a general system of education this session. He concluded by moving a grant of £263,000 for educational purposes.

Sir J. PAKINGTON expressed his regret at hearing that it was not the intention of the Government to introduce a new measure upon this most important and interesting subject in the present session.

Mr. MIALL said, however anxious he was to see an efficient system of general education established throughout the kingdom independent of Government interference, he could not understand why the vote of this year should be so largely increased. Last year it was £150,000, whereas in this year it was £263,000. He proposed to reduce the vote to the amount it was last year.

Mr. COBDEN said that owing to the way in which the question had been hugged it had got back in that House, for which he thought the noble Lord (Russell) was in some measure to blame. He was of opinion that they must come at last to a local rating for educational purposes.

Lord J. RUSSELL in reply said that no system of education, in his opinion, would be effectual that did not take into account the feelings and opinions of the denominational bodies. He did not think that a mere secular system of education would give general satisfaction.

Mr. MIALL having withdrawn his amendment, the original vote was assented to.

Several other votes were agreed to during the remainder of the night.

NATIONAL FESTIVAL IN CELEBRATION OF THE UNION BETWEEN ENGLAND AND FRANCE.

A numerous and influential meeting, convened by public requisition, was held in the Egyptian hall, Mansion-house, on Wednesday, for the purpose of devising the best means of entertaining worthily a number of distinguished French Citizens in the course of the present summer, as a return for the courteous hospitality exhibited towards the English Visitors to Paris in the autumn of 1851.

The chair was taken by the Right Hon. the Lord Mayor, who opened the proceedings by stating that, on the 7th of June last, a number of gentlemen, principally in connection with Mr. James Anderton, met at the Mansion-house, to consider whether it would be possible to entertain some distinguished citizens of the neighbouring country, France, in such a way as should worthily return the splendid hospitality established towards numerous classes of the people of this country by the French nation in the autumn of the year 1851. At that time his Corporation of London, many of our men of science, and the Commissioners of the Great Exhibition, were most regally received by the city of Paris, and the hope was entertained by most of the visitors that the time might come when a suitable return might be made in London. At the meeting of the 7th June, it was ultimately decided that, before taking any steps of a public character, the committee should ascertain what was the feeling of her Majesty's Government on the subject. An important deputation waited on Lord Palmerston, who communicated with his colleagues; the matter engaged the attention of the whole Cabinet, and they were unanimous that the proposed object was a very proper one, and met with the entire concurrence of the Government. (Loud cheers.) Similar views had since been expressed by the Earl of Clarendon, who said, so lately as on Monday last, that her Majesty's Ministers all concurred as to the propriety of the step. The second meeting was held, and a resolution was carried, unanimously affirming the propriety of the object, and pledging the meeting to the exercise of the best exertions in carrying it out. That resolution was carried unanimously, and a committee was formed, which soon found themselves in a condition to add the names of about 350 men of distinction to their numbers, all anxious to see this national object carried out to a successful issue. The committee had thought right to call the public together on the present occasion, to lay the plan of operations before them, and to invite the suggestions of any gentlemen present for or against the project. Movements of this nature necessarily involved a large expenditure, and up to this time the subscriptions had been only partial; but if the people of England approved of this enthusiastic manifestation of courtesy and friendship to our allies, there would be no want of that most important ingredient in all movements of this kind—namely, money (Hear, hear). They had already got more than £3500, and he might add for public information that it was not intended by the committee to raise money to defray the expense of whatever banquets might be given, as many public corporations and scientific bodies would render their powerful aid in giving to our foreign friends a worthy series of entertainments (Cheers). But still there were various expenses which would require very liberal aid on the part of the public (Hear). The Government being entirely with them, would give the strangers every facility of seeing the various public works and buildings, and every celebrated Gallery and collection of works of art would also most probably be thrown open (Hear).

Mr. Masterman, M.P., was fully sensible of the kindness shown by the people of Paris to the Corporation of London in 1851; and it was only natural to them, as Englishmen, to wish to make a suitable return for that hospitality (Cheers). He was one of those who thought that public friendships were the subject of opinion that some of the most distinguished men, connected with legislation, arts and sciences, literature, manufactures, commerce, and agriculture, should be invited to visit this country, with the view of demonstrating to the world how much of the alliance now happily subsisting between the two nations—an alliance the continuance of which is eminently calculated to promote in all countries the permanency of peace, and its consequent blessings—order, prosperity, and happiness.

Mr. Brown, M.P., felt honoured in being permitted to second a resolution which had for its object the cementing of the friendly connection between England and France. The French people had invited the English people in commemoration of the first Crystal Palace, and it so happened that we had now another Crystal Palace of greater magnitude and splendour to show them (Hear, hear). He believed that in that Crystal Palace they would have room to entertain all their French guests, and that it was also provided with an excellent kitchen—no mean desideratum when dining was the occasion was a public entertainment (" Hear, hear," and laughter). He thought, therefore, that the present was a propitious moment for inviting the French people over to see us; and that a time when our soldiers and sailors were fighting side by side in the same battles was the very best possible time for the civilians of the two countries to become better acquainted (Loud cheers). He believed that the results, both political and commercial, must follow the more intimate alliance of the two countries (Hear, hear). Mr. Brown concluded by seconding the resolution, which, having been supported by Mr. Davis, was carried unanimously.

The following resolutions were also carried unanimously:—

That the Aldermen and Common-council, the Livery Companies, and Mercantile Corporation of the City of London, the Lord Mayor of Dublin, the Lord Mayor of York, the Lord Provost of Edinburgh, the Lord Provost of Glasgow, the Mayors and Municipalities of the other Cities and Boroughs of the United Kingdom, the Chancellors, Vice-Chancellors and Principals of our Universities and Colleges, as well as the Heads of the Learned and Scientific societies, be invited to afford their valuable co-operation

That a subscription be entered into for carrying into effect the object of the meeting; and that the Right Hon. the Lord Mayor be appointed treasurer; and the Right Hon. Lord John Russell, M.P., Lord Viscount Ebrington, John Masterman, Esq., M.P., Sir James Duke, Bart., M.P., and the Baron Lionel de Rothschild, M.P., be respectfully requested to act as trustees.

TOWN AND TABLE-TALK ON LITERATURE, ART, &c.

The great literary feature of the week has been the publication of the seventh and last volume of Lord Mahon's "History of England," from the Peace of Utrecht to the Peace of Versailles—a work written with infinite care and skill, with great moderation, and a knowledge of the times and of the men who figured to advantage or disadvantage during the last century. In reading Lord Mahon's history, one feels most pleasantly that his Lordship is not a partisan—that he is neither Whig nor Tory, Churchman nor anti-Churchman—that he understands the events he describes as if he had lived at the time they occurred, while he reasons upon them with the calmness of a philosopher and the freedom and power of a great historian. We had no good history of the same period, so that this is a work which is really an addition to our knowledge.

The largest sum ever given for a single coin was given on Monday last at Mr. Cuff's sale, at Sotheby and Wilkinson's: £220 were given—not for a Greek or a Roman coin, not for an Alexander or a Cæsar, an Otho or an Oliver, but for a pattern piece in gold of King Charles I. of England. This highly-interesting coin was intended, it is thought, for a £5 piece. It was never published. It bears the King's bust, to the left, bareheaded. Over his armour is a lace collar. Its history is curious. It was purchased about ten years ago by Lieutenant-Colonel Drummond of the Rev. Mr. Commeline, of St. John's College, Cambridge, a collateral descendant of Bishop Juxon, to whom it was presented by Charles I. a little before his death. The Bishop devised it by will to Mrs. Mary Guyters, from whom it descended to her granddaughter of the same name, who married the Rev. James Commeline, the grandfather of the Mr. Commeline from whom it was bought by Colonel Drummond.

There is still a stranger story connected with it. Mr. Tull, the late worthy coin-dealer, in Russell-street, Covent-garden, bought it from Colonel Drummond for £50. He then offered it to the British Museum for £80, but the Trustees refused to purchase, and it was immediately sold by Mr. Tull to the late Mr. Cuff for £60. That the present Trustees lamented the short-sightedness of their predecessors is evident from the fact that the recognised agent of the Museum contended for it at the sale the sum the trustees might have had it for some twenty years ago.

The public will naturally inquire for the name and rank of the romantic gentleman who gave two hundred and sixty pounds for a single coin. We can answer the inquiry. The coin was bought by a dealer for Mr. Brown, of the eminent publishing firm of Messrs. Longman, Brown, Green, and Longman. Some one asked at the sale if Mr. Brown was likely to pay for it in the clipped coin which old Jacob Tonson tried to impose upon Dryden. But no one who knew Mr. Brown would have asked such a question; and no one who had seen his cabinet would imagine for a moment that a clipped coin of "hook-nosed William" was to be found in the entire collection. Bookselling is looking up. Publishers are becoming men of taste out of their profession. We have heard, indeed, of one distinguished publisher who gives more for standard roses than for standard authors

An excellent early Turner has been on view at Christie's during the present week—a picture of the year 1799, "Kilgarran Castle, on the Twyvey, in Wales." The effect which Turner sought to represent, he tells us, was that of a sunrise as seen through a hazy summer mist. Not much of the artist's intention is at present to be seen in the picture: it is rather a struggle of pictorial effect through dirt. The picture was once in the famous collection of Lord de Tabley.

Tuesday and Wednesday next will disperse all that remains to be sold of the pictures, drawings, and engravings of the late John Martin. Among the lots we observed some handsome Sèvres china, presented to the great painter by King Louis Philippe, and a pair of candlesticks, a present to him from King Joseph Bonaparte.

Mr. Cuningham and Mr. Morris Moore will be glad to learn what Dr. Waagen is really doing in this country. We can tell them. He is engaged in naming, classifying, and cataloguing the collection of Early German Art, at Kensington Palace. The collection is the property of Prince Louis D'Ottingen Wallerstein, and will repay a visit. The task of arranging could not be in better hands.

Antiquaries who recollect to what advantage Oxford was seen at the recent congress there, of the Archeological Institute, are preparing for a similar treat, next week, at Cambridge. The sister University, it is said, is to rival Oxford, in liberality. We shall look in, and shall have words to say, in our column, about the meeting.

A choice literary treasure has just turned up, and is now in Mr. Wilson Croker's hands—an unpublished character, in verse, by Pope (the character of the great Duke of Marlborough), intended for insertion in his "Moral Essay on the Use of Riches." Pope never wrote more vigorous lines. That such a character had been in existence is evident from two passages in Spence. Mr. Croker's copy is written in Pope's own hand, on a suppressed edition of the "Essay." The copy belonged to Warburton.

Last week brought to light another literary treasure, though of a different kind—a copy of Shakspeare's "King Richard II." with the following title:—

"The Tragedie of King Richard the Second. As it hath been publikely acted by the Right Honourable the Lord Chamberlaine his servantes. By William Shake-speare. London, Printed by W. W. for Mathew Law, and are to be sold at his shop in Paules Church-yard, at the signe of the Foxe. 1608.

The Duke of Devonshire's copy of this edition is now no longer unique. Mr. Halliwell was the fortunate purchaser—the price nineteen pounds, and not too much.

MUSICAL TESTIMONIAL.—A very gratifying testimonial of public esteem has recently been presented to Mr. J. Baptiste Calkin, by the Warden and students of St. Columba's College, in Ireland, upon Mr. Calkin being about to take up his residence in London, after holding the offices of organist choir-master, and precentor in the above college for seven years. The gift is an elegantly-ornamented baton, of bog-elm, manufactured by Mr. West, of Dame-street, Dublin. The lower ornament represents the ferule of an ancient Irish crosier The staff is decorated with harps, and a large one at the top; these instruments being such as were used by the Irish bards of olden time Round the top is engraved the music of the opening of an anthem ("It is a good thing to give thanks," 92nd Psalm), composed by Mr. Calkin, for the College choir, at the request of the Warden. The baton is enclosed in a black case of bog-oak, bearing a silver inscription-plate.

GARIBALDI AT ROME, PAINTED BY G. H. THOMAS.

FROM THE ROYAL ACADEMY EXHIBITION.

WHEN the Duke of Wellington was asked what he thought of Sir William Allan's picture of the "Battle of Waterloo," he replied, "Good — very good; not too much smoke." The Duke confirmed his criticism by purchasing the picture.

Mr. George Thomas has, in the picture engraved in our present number, worked in the spirit of the Duke's comment. His "Garibaldi at Rome" is a clever picture of the Varnet school, grasped with a skilful eye, and painted with a firm and dexterous hand.

Mr. Thomas was at Rome in 1849, and the sketch of this picture was made by him at the time. He had peculiar opportunities of catching the figure and face of Garibaldi, and has turned his opportunities to excellent account. A white dress and a grey horse are difficult objects to render with a true sense of the harmony of colour, but Mr. Thomas has struggled successfully with his difficulty.

The horrors of war Mr. Thomas has softened with one of those touching incidents only too rarely seen on the battle-field. The consolation offered by a female hand is very happily introduced. Penrose has made good use of a touching incident of the same character, in his clever poem of "The Battle-Field."

Mr. Thomas's picture is hung in the West-room.

GARIBALDI AT ROME, 1849.—FROM A SKETCH MADE DURING THE SIEGE.—PAINTED BY G. H. THOMAS.—FROM THE EXHIBITION OF THE ROYAL ACADEMY

SCENE FROM MOZART'S "IL SERAGLIO," AT THE ROYAL OPERA, DRURY-LANE.

ROYAL OPERA, DRURY-LANE.

We have selected for Illustration, from Mozart's "Il Seraglio," fully noticed in our Journal of June 17, the tableau in the last scene (a hall in the *Pacha's* palace), immediately before the fall of the curtain. Here the two pairs of lovers have attempted their escape, but their flight has been intercepted. They have been seized by the guards, and brought before the *Pacha*, who is at first enraged; but the magnanimity of his nature prevails, and he resigns his fair captive to her lover. On the right side of the scene is a group formed by the *Pacha* (Herr Hoizel), *Constance* (Mdme. Ruderdorf), and *Belmonte* (Herr Pace). On the left are *Pedrillo* and *Blonda* (Castelli and Mdlle. Büry). In the middle, the *Pacha* is giving orders to *Osmin* (Formes) to convey the liberated captives safely on board their vessel; while the jealous old Turk is giving vent to his rage and disappointment.

ROYAL ITALIAN OPERA, COVENT-GARDEN.

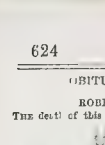
THE management have recently produced a Divertissement of a very gay and sparkling character. The tale is Eastern, and the principal characters are a Sultan and his son. Our Artist has selected for Illustration the opening scene, which represents the interior of the Harem. The *Prince* is discovered lulled to sleep by the music to the dances of the Odalisques, who then noiselessly retire. Thereupon the scene opens, and discloses the figure of a beautiful female, gazing at the *Prince*, from a radiant star. The vision gradually fades. The *Prince* starts, and rushes forward, but is in despair at finding it only a dream. The *Sultan* now enters; and, on learning the cause of his son's grief, tenderly reproves him. The *Prince* then explains to his father that a beautiful being, a Star of the Heavens, constantly appears to him in his dreams, and fears that she has cast a spell over him. The *Sultan* entrusts his son to dismiss from his mind such illusions, and prevails upon him to see new slaves that have been purchased for him. At a signal, a group of Bayadères bound upon the stage, a grand *pas* follows; the *Prince* retires, and the *Sultan* dismisses the Harem. The scene then changes to the Gardens of the Harem by starlight. The *Prince* enters, and invokes one of the Stars to leave the firmament, and assume a mortal form. A Star glides to earth; a rose-bush expands, and discloses *Stella*, who, however, eludes his grasp and disappears. The *Prince* follows her: music is heard, and a *Demon* rises from the earth: the *Prince* is thrown into a sleep; the *Demon* calls up a slave, whom he metamorphoses into an exact counterfeit of the *Prince*, and to whom is entrusted the task of ensnaring *Stella*. The antagonism is carried on through a variety of choregraphic forms, as a grand Pas de Fascination, a Bacchanalian Waltz, &c., by *Stella* and her sister Stars.

SCENE FROM THE NEW BALLET OF "UNE STOILE," AT THE ROYAL ITALIAN OPERA.

OBITUARY OF EMINENT PERSONS.

ROBERT EARL OF CASTLE-STUART.

THE death of this nobleman occurred on the 10th ult., at his seat, Stuart-hall, county Tyrone, from an attack of bronchitis. His Lordship was born 19th August, 1784, the elder son of Andrew Thomas Stuart, Esq., of Irry, county Tyrone, who established his right to the old Scotch barony of Castle-Stuart and was eventually created an Earl in 1800. His ancestors, sprung from a son of King Robert II. of Scotland, were for several generations



Lords Aberdale and Oehltrie. Lord Castle-Stuart married, April 24, 1806, Jemima, only daughter of the late Colonel Robinson, R.A., and had five sons and two daughters. The eldest of the former, Edward, is the present and third Earl of Castle-Stuart.

LORD AUGUSTUS FITZCLARENCE.

LORD AUGUSTUS FITZCLARENCE, Rector of Maple Durham, Oxfordshire, and Chaplain to the Queen, died the 14th ult. His Lordship was fourth son of King William IV., and brother of William George, 1st Earl of Munster. He was born in 1805, and married, in 1845, Sarah Elizabeth Catherine, eldest daughter of Lord Henry Gordon, by whom he had a son, Augustus, born in 1849, and other issue.

LIEUT.-COL. HANDCOCK.

RICHARD BUTLER HANDCOCK, formerly Lieut.-Col. of the 13th Light

Infantry, died at Pisa, on the 4th May, in his seventy fourth year. Having graduated in the Dublin University, where he obtained distinguished honours, he joined his regiment in 1793, being then eighteen years old. His first campaign was under Sir R. Abercromby, at the memorable landing in Egypt, 1801, where he was severely wounded. He was afterwards on active service in various parts of the world for upwards of twenty years; and his able defence of La Colle Mill an important post during the American war—is recorded as a brilliant exploit in the annals of the 13th. He was son of Matt Handcock, Deputy Muster-Master-General of her Majesty's forces in Ireland, whose ancestor, Matt. Arch leacon of Kilmore, was son of William Handcock, M.P. for Westmeath, from whom Lord Castlemaine's family, and also the Handcocks (now Pemples), of Waterstown, are descended. The family is very ancient, being on record many centuries in England, and hath come originally from Sweden.

LIEUT.-COLONEL CHARLES AUGUSTUS WEST.

THE death of this gallant officer occurred on the 20th ult. Col West commenced his military career as a Cadet in 1782, and attended King George's III.'s Prince of Wales, for four years, until he received his commission in the 3rd Regiment of Guards, in March, 1794. Very shortly after, he proceeded to Holland, and was present in all the affairs wherein his regiment was engaged. During the Rebellion of 1798, he was Aide-de-Camp to Lord Cornwallis, and in the second expedition to Holland, June, 1799, he also took part, being severely wounded on more than one occasion, and always distinguishing himself in the several encounters in which he was engaged. Accompanying his regiment to Egypt, he participated in all the glorious actions attending the surrender of Alexandria, when he returned to England; and, in May, 1804, was promoted to the rank of Lieut Colonel. In 1806 he served in Germany; in 1807, embarked upon the expedition to Zealand and Denmark, person ally assisting at the Siege of Copenhagen; and, in 1808, joined the army in the Peninsula, where he fought at the Passage of the Douro and the battles of Salamonde and Talavera. In the last conflict, during the charge of the brigade of Guards, Colonel West fell into the hands of the enemy, but was rescued by the advance of the reserve corps. Not long after, he retired, invalided, on half-pay, but was promoted to the full pay commission of Lieutenant-Colonel of the 1st Royal Veteran Battalion, together with the Lieutenant-Governorship of Landguard Fort.

GODFREY MEYNELL, ESQ., OF MEYNELL LANGLEY, COUNTY DERBY.

THIS respected country gentleman, a magistrate and Deputy-Lieutenant for Derbyshire died on the 18th ult., at Meynell Langley, aged seventy-four. He succeeded to the estate in 1802, at the decease of his father, the late Godfrey Meynell, Esq., and served as High Sheriff for the county of Derby in 1811. The Meynells of Langley are a younger branch of the present family of De Meynell, founded by Hugo de Grave Meinill.

Mr Godfrey Meynell married, first, 14th June, 1803, Mary Anne, only daughter of Avery Jebb, Esq., of Tapton-grove, county Derby; and, secondly 28th April, 1816, Mary, only daughter of David Balfour, Esq.; and had issue by both.

MR. PROSSER, C.E.

MR. RICHARD PROSSER, the eminent civil engineer, was one of those men who carve out a path for themselves. In early life he was employed in the then extensive brass foundry establishment of Penn and Williams, Broomgrove-street, Birmingham. Here he spent his leisure hours in the examination and study of the principles of mechanics and drawing. By these means he qualified himself for the profession of a civil engineer, in the active duties of which he was, with much and deserved enthusiasm, engaged until his death, which took place on the 28th ult., at his house, near Kings Norton.

On matters relating to inventions or the processes carried on in the manufactures and trade of the town of Birmingham, Mr. Prosser was a high authority. He was appealed to on the occasion of the trials of several important patent cases; and seldom, if ever, was his aid sought in vain. The late agitation respecting the Patent Laws, which secured the now improved law of property in inventions, found Mr. Prosser among the most earnest advocates of patent reform. In the summer of 1851 Mr. Prosser was examined before the Parliamentary Committee of the House of Commons for the purpose of giving important information as to the defective state of the Law of Patents. Mr. Prosser was also employed by the Government to purchase the invaluable Indexes of Patents, compiled by Professor Woodcroft.

THE FRENCH EXHIBITION OF 1855.—The East India Company, which took such a highly significant share in the Exhibition of London, has voted £50 000 to defray the expenses of carrying goods from the East: Australia also—that distant colony of farmers, shepherds, and seekers for gold—has voted £5000, in order to be better represented at Paris than it was at London. The Duke of Newcastle has written to all our Colonies, to stimulate the preparations for sending goods to the Exhibition. An idea may be formed of the sympathetic movement which will bring the English population to France, by the solid fact, that the workmen of Norwich have been for some months putting each a small sum apart, in order to raise a fund, to enable them to go *en masse* to Paris. Everything announces that Prussia will reciprocate worthily the hospitality of France before the close of the first great industrial exposition of 1855.

THE AT OMIC—NARIN SIXTY HOUSES BURNT.—About two o'clock on Monday afternoon a disastrous fire broke out at Olney, which continued through the night, burning nearly sixty houses to the ground. Many of the inhabitants have to mourn the loss of their furniture. During the night, between 4 and 500 women and children were sheltered in the National Schoolroom and other places. The fire is supposed to have been the result of accident. A great amount of farming property, such of hay and straw, and outhouses, were destroyed, but no live stock was burnt, except a few pigs.

AMMUNITION FOR THE EAST.—Sixty tons of ammunition were shipped on board the iron screw steam troop ship *Falcon*, on Wednesday for conveyance to the East. It is chiefly for the Minie rifle, and was brought down this morning by railway train. The Falcon leaves our Colonies, to the East about 500 men belonging to the three regiments of Foot Guards, together with some 300 men of various other regiments, to join head quarters. Having shipped the ammunition at Sheerness, she steamed away for Cowes, on Wednesday afternoon, the wind, also, being fair.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The amount of money purchases of stock having been comparatively small, the market for National Securities has been less active this week; nevertheless, prices have been up remarkably well. The news from the East, to the effect that the Russian troops are rapidly retiring from the Principalities, has failed to have any material influence upon the quotations. We may observe, however, that the rapid increase in the imports of bullion has led many persons to the conclusion that the decision to call in the Bank of England will now rapidly increase; and that, as a consequence we shall have money more abundant, with a lower rate of discount. At present there are no indications of a return of the late heavy exports to the Continent, and the exchanges are decidedly against exports; yet it is by no means improbable but that another drain, to pay actual balances, will be made upon us. From Australia and America we shall, no doubt, draw largely, as our trade in those quarters is still very extensive, and legitimately on the increase; but an large accumulation of the precious metals cannot reasonably be anticipated, as we have yet large payments to make for foreign coin. To China, we shall make extensive remittances of silver, arising from the high value of that metal at Canton. This week several parcels have changed hands for that destination at 63d per ounce. The importations may be summed up at about £700 000, the greater portion being silver from Mexico.

On Monday the Consol Market was very inactive, and prices fluctuated to some extent. Consols for the Account varied from 93⅜ to 94¼; the Three per Cents Reduced, 93⅜ to 94; and the New Three-and-a-Quarter per Cents, 93⅜ to 94. India Bonds sold at 1s pr prm.; Exchequer-bonds, 2s pr prm.; Exchequer-bills to 2s prm.; Exchequer-bonds, Scrip, A Series, ½ prm.; Long Annuities, 1850, 4 11-16. The transactions, on Tuesday, were limited, and the quotations showed a tendency to decline. Bank Stock was 205. The Three per Cents Reduced realised 94¼ to 93⅝; the New Three-and-a-Quarter per Cents, 94¼ to 93⅝; and Consols for Account, 94¼ to 93⅝. India Bonds sold at 2s prem.; Exchequer-bills, 2s prem to 2s dis.; Exchequer-bonds, Scrip 1858, ½ prem. Jobbers were alternately buyers and sellers on the following day, when the Three per Cents Reduced were officially marked 94⅜, 93⅝ 94⅜; and the New Three-and-a-Quarter per Cents, 94⅜ 93⅝. India Bonds were 2s, prem.; Long Annuities, 4 7-16; Exchequer-bills, 2s dis. to 2s prem.; Exchequer-bonds, Scrip, 1858, ⅜ ½; Ditto, 1859, ⅝ ¾ prem. There was considerable firmness to the close on Wednesday. The Three per Cents for the Opening were 94¼ to 93⅜ ex div. The Three per Cents Reduced marked 94 to 93⅜; and the New Three-and-a-Quarter per Cents, 94¼ to 93⅝. India Bonds, 2s to 3s prm. Bills to 2s prm.

The business doing in the Foreign-house has been but moderate. In prices, no material change can be noticed. The following are the leading quotations for the week:—Brazilian Five per Cents, 100 to 100½; Ditto, Small; 99½; Buenos Ayres Six per Cents, 1853, 93; Chilian New Four-and-a-Half per Cents, 1852, 93; Equador Bonds, 29½; Mexican Three per Cents, 24½; Peruvian Three per Cents Deferred, 13½; Ditto, Active, 13½; Portuguese Four per Cents, 44½; Russian Four and-a-Half per Cents, 91½ to 91¼; Dutch Two and-a-Half per Cents 61¼; Dutch Four per Cents, 99 to 99⅝; Granada Onesand-a-Half per Cents, 18½; Ditto, Deferred, 6½; Spanish Bonds (Blind), 22½; Russian Five per Cents, 1822, 98½; Sardinian Five per Cents, 88; and Venezuela Three-and-a-Half per Cents ....

There has been a fair business transacted in foreign-exchanges; but we understand that advances have not been freely made, either by bill-brokers or private bankers.

The business doing in Joint-Stock Bank Shares have been very moderate. English North American have marked 65; Colonial, 18; English, Scottish, and Australian Chartered, 9; London Chartered of Australia, 21¾; London Joint Stock, 27; London and Westminster, 39¾; Ditto, Scrip, 1½; Provincial of Ireland, New, 19½; Union of Australia, 71. Miscellaneous Shares have sold rather briskly. Australian Agricultural 4¾; Crystal Palace, 17¾; Ditto, Preference, 15¼; Ditto, Deferred, 5¾; Ditto, Scrip, 1½; Hungerford Market, 3¾; Ditto, New, 1¾; Land Corporation of Canada, 1¾; Canada Land, 1¾; Crown Lands, 1¾; Canada Land Company, 1¾; Queen's Canada, 1¾; Canada Land Company, 1¾; Queen's Canada, 1¾; Canada Land Company, 1¾; Queen's Canada

AMUSEMENTS, &c.

THEATRE ROYAL HAYMARKET.—Every Evening this Week KING'S No. 4 OF THE ROUND TABLE, and the successful new Farce, entitled as LIKE AS TWO PEAS.

ROYAL PRINCESS' THEATRE Oxford Street. Monday, Wednesday, Friday, and Saturday, the CURRICLE DANCE Tuesday and Thursday, the FAIR HEARGUERITE, with other Entertainments. The New Ballet Every Evening.

ROYAL ITALIAN OPERA.—OPERA BUFFA and VAUDEVILLE in the Theatre Royal, Drury Lane, at moderate terms, can always be secured at HAMMOND'S MUSICAL LIBRARY, 9, New Bond-street, opposite the Clarendon Hotel. Opera Fan Tickets and Private Boxes at all the Theatres.

CONSTANTINOPLE and the WAR.—The LECTURE illustrating the MOVING DIORAMA of the EGYPTIAN-HALL is delivered on WEDNESDAYS and SATURDAYS, by Mr. STOCQUELER; and on the other days by Mr. G. KENNEY. Daily, at half-past Two and Eight. Admission, 1s.

MR. ALBERT SMITH'S MONT BLANC being the Entrance Overland and the Simplon, EVERY EVENING, at 8 (except Saturday), at Three o'Clock Saturday Morning. MONTAGU'S BRITISH ARMY IN TURKEY, with the BLACK SEA. Exhibiting daily, at Three and Eight. Admission, 1s., 2s., and 3s.

BOTTLE of CHAMPAGNE UNCORKED, by HORACE PLASTIC a Comfeel, Musical, Polyphonic Hermaphrodite. MONDAY, JULY 3, commences at Eight. Stalls, 3s.; Unreserved seats, 1s. LOWTHER ARCADE EXHIBITION ROOM, Adelaide-street.

SOCIETY of PAINTERS in WATER-COLOURS.—The FIFTIETH ANNUAL EXHIBITION is NOW OPEN at their Gallery, 5, Pall-Mall East, from Nine till Dusk. Admittance, 1s. Catalogue, 6d. JOSEPH J. JENKINS, Secretary.

THE NEW SOCIETY of PAINTERS in WATER COLOURS.—Their TWENTIETH ANNUAL EXHIBITION is NOW OPEN. Gallery, 53, Pall-Mall. From Nine till dusk. Admission 1s. JAMES FAREY, Secretary.

GALLERY of GERMAN PAINTINGS.—The SECOND ANNUAL EXHIBITION of the WORKS of MODERN GERMAN MASTERS is now OPEN daily, from 9 a.m. till dusk. Admission, 1s. Gallery, 168, New Bond street, next door to the Clarendon.

ROYAL ACADEMY of MUSIC.—TWENTY-FIFTH CONCERT, for the Exhibition of the Students will be held in HANOVER-SQUARE ROOMS, on SATURDAY MORNING, next JULY 8th, to commence at Two o'Clock. Single Tickets, half a Guinea; Reserved Seats, One Guinea. To be had at the principal Music-sellers, and at the Royal Academy of Music, Tenterden-street, Hanover-square.

MUSICAL UNION.—EIGHTH and LAST MATINÉE this Season, on TUESDAY next, July 4, at Three o'clock precisely. Quartet in G, No 8 (Royal Ed.) Haydn, Trio in C minor, No. 1, Op. 66, Mendelssohn, Solo, Pianoforte, Miss Clauss; Solo, Violin, Signor Sivori; Solo, Violoncello, Signor Piatti; Vocalist, Madame Lemaire, accompaniment M. Benedict. Conductor, Mr. Sainton. Subscription to this season 3 Guineas—Visitors' Tickets, 10s. 6d. and Pattie. Tickets, Mr. Mitchell's Library, 33, Old Bond-street, and Cramer and Co.'s, Regent-street; Chappell and Co.'s, New Bond-street. Members are requested to pay subscriptions per Post, without delay.

J. ELLA, Director.

ZOOLOGICAL GARDENS, REGENT'S PARK.—Fellows and Visitors are informed that a pair of GIANT CRANES, an adult pair of INDIAN BISONS, and a pair of LEIPOAS have been added to the collection. The Band of the 1st Life Guards will perform (by permission of Colonel Yorke) on Saturday, at Four o'clock, until further notice. Admission, 1s. 6d. each. SCLATER, Secretary.

ROYAL PANOPTICON of SCIENCE and ART, Leicester-square.—Popular Lectures every Afternoon at Three and Evening at Eight; also Tuesday, Thursday, and Saturday Mornings at Eleven. Dr. Bachhoffner on Electricity, Mr. Barlow on Mechanics, Dr. Ryan on Chemistry, Mr. F. Arnold, Monday, 3, 15; Wednesday, 7, 45; Friday, 3, 15; Saturday, 11, Mr. Pepper on Optics, Tuesday, 3, 15; Thursday, 7, 45; Saturday, 3, 15. Mr. Pepper's Ghost Lecture, Monday, 8, 15; Wednesday, 7, 45; Friday, 3, 15

THE BARRACKS, AT SCUTARI.—FROM A DAGUERREOTYPE BY J. ROBERTSON, ESQ., OF CONSTANTINOPLE.

SCUTARI.

CONSTANTINOPLE is well provided with Barracks. Four vast quadrangular building have been erected on the European side without the walls; and one at Scutari, founded by Selim, has been restored. Within Stamboul are three or four smaller ones for infantry; one for cavalry at Dolma Baghdahah; two for artillery at Tophana; and a handsome edifice on the hill beyond Pera. It will be recollected that the extensive Barracks at Scutari was allotted to the British troops. We have already described their internal economy; and we now engrave an Exterior View, from a Daguerréotype by Mr. Robertson, of Constantinople, which shows the buildings in their full extent.

Our own Artistic Correspondent at Constantinople also enables us to illustrate a recent visit of the Sultan to the English camp. His Highness rode a black horse, and wore wide white trousers, a plain cloak and coat, a small fez. His guard consisted of a few grenadiers, wearing small round blue jackets, the collars and cuffs laced with gold, and the firelocks without bayonets. The Sultan was met, on his landing, by M. Pisani, of the English Embassy; and the advancing group consists of the English Ambassador, Lord Stratford de Redcliffe, with Lord Raglan on his left, on his right the Duke of Cambridge; and on the extreme right is Lord Cardigan. In the background are seen the Barracks, and upon the hill below are tents. In the left-hand distance, seen beneath the noble tree, is the Sea of Marmora; the landing-pier, and the Sultan's barge, awaiting his return. In the extreme distance is the European shore, with the *pointe du Sérail*, and a forest of minarets rising from the trees.

Our Artist chanced to be at Scutari, expecting to find little beyond the usual routine of garrison and camp life, when he heard the roar of cannon, and soon perceived the object of the salutes of the ships in the harbour, which was nothing less than the approach of the Sultan in his barge. Our Artist hastened to the Marmora shore, and there saw the Sultan land, without ceremony. He was dressed in a very plain manner, having neither the stars nor decorations he usually wears when going to the mosque; nor was he in such full costume as when he attended, a few days previously, an examination of the Military School, a ceremony of less importance than his present visit.

The Sultan having met the English Commanders and staff, as our Artist has illustrated, the whole party rode up the hill towards the Barracks. The bystanders were few; but, from the review offering little worthy of particular notice, the visit is presumed to have been intentionally private. Had a Turkish military turn-out taken place, numberless caïques would cover the Bosphorus, bearing a multitude of curious visitors; whilst the road to the review-ground would have been covered with arabas and horsemen.

THE WAR ON THE DANUBE.

(From our Special Correspondent.)

SCHUMLA, June 13, 1854.

THE details of the engagement which took place at Nicopolis on the 5th inst. have reached me: they are of the most remarkable import. It seems that, by order of Sali Pacha, Commandant of the fortress, two companies of the 2nd Regiment of Redifs and 280 Albanians crossed the Danube, and landed on the opposite bank, for the purpose of attacking a battery raised there by the Russians. This force, however, had hardly landed, when Sali Pacha observed the enemy

VISIT OF THE SULTAN TO THE ENGLISH CAMP, AT SCUTARI.

MILITARY EXECUTION OF A RUSSIAN SPY, AT SCHUMLA.

moving out from Turna in force, having three battalions of infantry, with four guns. Orders were instantly despatched to recall the Turkish force, which was considered too small to oppose the Russians. The Redifs retired into their ships instantly on the order being given; but the Albanians, who were men of Scutari and Ghega, refused to turn back, declaring that they had come to fight and not withdraw. The Albanians, being thus left to themselves, advanced against the Russian battery, which they stormed and took, having disposed of the enemy which it contained. It was held by four companies. Here they stood awaiting the attack of the Russians, who were n t long in advancing to the rescue. In addition to the force already sent out, they surrounded the doomed Albanians with two more battalions, making in all five, and with eight more guns; making a total of twelve; or a battery and a half. For four hours the fire was kept up on both sides. At last the Russians stormed the place with the bayonet, and destroyed or took prisoners the whole of the Albanians. They succeeded, however, only after a severe struggle, the Turks defending themselves desperately with their long knives, their ammunition having been previously expen'ed. One single Albanian escaped by swimming, although wounded. He affirms that the loss of the enemy was 700 men killed.

Yesterday, or the day before, 4000 English landed in Varna. The main force of the French are on their way hither, and will, probably, by this time be in Adrianople.

We have been much amused, and the person most concerned seriously annoyed, by the long accounts published in the European journals of the death of Col. Dien in a skirmish near Kalafat. As I have the honour of being personally acquainted with that gentleman, I can safely affirm that he is here and in very good health.

As for Kalafat, there remains in it only a part of the garrison, the remainder having advanced to the town of Krajova. The Russians, according to the last accounts, were on the opposite side of the river there.

A great murmur throughout the town, and the sounds of drums and music announced, on the 10th, that some extraordinary ceremony was about to take place. Crowds were flowing with a rapidity seldom witnessed amongst Turks, to the Konah of Ismail Ferik Pacha. Companies of infantry were marshalled in the court-yard, and drums beat a slow movement, whilst a brass band performed a series of joyful airs. Presently a Bulgarian, dressed in the black skin cap of the country, was led from one of the cells of a prison which forms one corner of the court. His hands were tied behind his back, and his elbows firmly pinioned. He was marched to the front of the battalions by two Saptics and a guard of soldiers; and, on the word of command being given by Ismail Pacha—the band and drummers marched out, followed by the prisoner and eight companies of infantry. Whilst the culprit was thus marched out and taken round the town, Ismail Pacha, with his suite, issued out in the direction of the plain, and was followed by the people in silence. The prisoner was a spy about to be taken to execution. The spot chosen for the fatal operation was the level ground south of the town, where the camp of the Artillery and Chasseurs is pitched. The distance walked by the culprit was about two miles; and he proceeded through the whole of the way with a firm and unflinching step. The crowd which surrounded and followed him was perfectly silent; and nothing was to be heard in addition to the drums and music, except that vague murmur and rushing sound which accompanies even the most decorous movements of large bodies of men. The ground on which the execution was to take place was guarded by files of soldiers, who kept the mob from pressing forward. The music and drummers wheeled to the rear. As they reached they spot the Saptics retired on each side from their prisoner, after binding his eyes; and a platoon of nine men, in three ranks, advanced to within twenty paces of the spy. At the word of command they fired. But one shot told, and the man fell. Two additional files were moved forward and fired, but the execution was still incomplete. Three men then came forward and bayoneted the wretch's body, which still writhed however, and it was not till an officer came forward and almost severed the head from the body that life appeared to be extinguished. The man who did this must have been a very fanatic Mussulman, for he raised his dripping sword to his mouth and licked the blood, probably to fulfil the letter of the Koran, which says "Thou shalt drink of the blood of the infidel."

I have endeavoured to write with coolness of a scene which made the deepest impression upon me. The death of a spy is well-merited, but it should be instantaneous. In Europe his execution is seldom delayed more than an hour after capture; for dead men tell no tales; but in the present instance the wretched man had been taken in the vicinity of Karasu, bearing upon him Russian gold and letters. There was a promise to him of 15,000 piastres, if he brought back intelligence to the Russian camp where the combined fleets had gone after the bombardment of Odessa, and he had also the mission generally to discover as much as possible the force and position of the Turks. The unfortunate wretch was a schoolmaster in the Dobrudja, and spoke perfectly Bulgarian, Turkish, Greek, Russian, and German. He was a native of Kasan, where his family still resides, and from the energy which he exhibited on his road to execution he must have been a useful agent in the hands of the Russians. As to the conduct of the Turkish officer, comments are unnecessary to qualify it. Turks at the present day, as this instance proves, are still in some measure possessed of the fanaticism of the immediate descendants of Mahomet; but I should be sorry to answer for the conduct of English or French spectators of such a scene as was enacted on the 10th.

Prince Napoleon Bonaparte is shortly expected here from Varna, where he most probably has already arrived. Within the last few day

OMER PACHA GOING ON BOARD "THE CHEK PER," AT VARNA.

we have already received several French officers. Colonel the Marquis de la Tour du Pin, an officer of the African army, *en retraite* because of deafness, has come to follow the campaign for pleasure; and with him is the Baron de Bussillet, who takes Turkish service also for the purpose of amusing himself. A more extraordinary novelty still is a female chief of Bashi bozouks, Fatima Hanoum, or Kara Gurel, an old Kurdish woman of seventy-eight, who rides astride of splendid Arab chargers at the head of 400 Kurds, and who astonishes the spectator by her dirty appearance, and the skill with which she fires pistols. She is of considerable wealth, and courageous, has her face uncovered, contrary to the practice of the Osmanlis, and expresses her disapproval of what she calls the antiquated and foolish custom of her countrywomen, who remain at home and veil themselves from sight, as if it were not far preferable for them to follow their husbands, and aid them in the holy war about to be waged against the Russians.

(The incident of the second Illustration, on the preceding page—Omer Pacha going on board the *Check Per*, at Varna, to meet the French and British Commanders, was described in the ILLUSTRATED LONDON NEWS of June 24.)

THE DEPARTMENT OF SCIENCE AND ART.

THE first Report of the Department of Science and Art, just issued, is a substantial octavo volume, of 643 pages, and contains copious information upon the history and present prospects (Dec., 1853) of the new scheme for promoting art-education amongst the multitude, more particularly in reference to manufacturing and other industrial pursuits. The project is an extremely interesting and laudable one, and is entitled to encouragement and support both from individuals and from the State—from individuals, because there is scarcely one who is not directly interested in the application of principles of beauty and convenience to some or other of the objects in every-day use; from the State, because some or other of the objects in question, avowedly unrivalled in respect to the essentials of economy of production, strength, and durability, is yet, to some extent, endangered by the competition of foreign producers in the matter of decorative design. Upon this subject we are not so sanguine as to imagine that the neglect of ages can be redressed in a day, nor even in a generation; or that amongst the hundreds who, under the auspices of the Department, attend for the first time lectures upon composition, in form and colour, the principles of ornamentation, &c., out of a hundred, after a sessional course, is able to discriminate between what is in good taste and what bad; to explain the grounds of distinction, and to exemplify his view by placing the two objects palpably on paper, something will have been gained, from which much will sooner or later follow.

Undoubtedly, in this education, the first step is to acquire the power of figuring, either by means of drawing or modelling the colours, forms, &c., of various objects. This hand-skill is the arts what, writing is to literature; and, without it, the would-be student has not even the means of study. We are glad to observe, therefore, that the directors of the new Department (which, as our readers are probably aware, superseded the former establishment at "Schools of Design") have paid great attention to this subject, and made it the necessary preliminary to all other instruction, laying down precise rules for the order of study. The system, as it at present is carried on, consists of—1. Schools for elementary instruction, established in various towns and throughout the country—either self-supporting, or partly self-supporting and partly supported by the State; this assistance of the State being given under the form of guaranteeing properly-qualified masters a minimum salary, the remainder of their remuneration then becoming dependent upon the fees from pupils; and the supplying of books, diagrams, models, &c., for teaching, at a reduction of a third or a half upon the price, and also in the gratuitous loan of models from the central museum in London; and 2 Courses of instruction in the principles of "applied design" to various processes in manufacture, given in the central institution in London; and to which pupils recommended from provincial elementary schools are, after examination, admitted gratuitously as pupil-teachers, to be afterwards accredited as teachers in provincial schools.

The general results of the last year's experience is, that there are at present 218 schools, chiefly for the poor, in different parts of the United Kingdom (exclusive of those in Ireland, from which the returns are incomplete), with an average of 33,709 scholars—each school having purchased copies and models to an average amount of £5, being half the cost to the State; and that eighty-six public schools, having 7313 children, chiefly of the poorer classes, have obtained the services of masters of the department employed in the local schools in their respective neighbourhoods, to teach elementary drawing, "which is now beginning to be recognised as necessary to all handicrafts:" the gross total of pupils in elementary design being thus upwards of 55,000. Further, "in concert with the Committee of Council on Education, 921 candidates as schoolmasters, educating in the several training-schools in England and Wales have been examined in elementary drawing; and 1060 schoolmasters and pupil-teachers have obtained for themselves or the use of the means of learning geometrical and free-hand drawing in the schools of the Department, with the view of teaching it in their schools."

As a proof of the growing desire which has been created for instruction of this kind, we are informed that "at present the demand for masters of Schools of Art very far exceeds the supply. The following places are now waiting to receive certificated masters—Bath, Barnsley, Birmingham, Bradford, Burnley, Caterham, Carlisle, Cheltenham, Clonmel, Dublin, Dunfermline, Exeter, Gloucester, Nottingham, Shrewsbury, Truro, and Worcester."

Two exhibitions of the productions of students from the schools of the whole country were held at Gore House during the past year (1852), those of elementary studies at Christmas, and those of advanced work in June and July; to which it may be added that similar exhibitions have been held during the current year. The awards of prizes to the advanced works were made by Sir C. L. Eastlake, P.R.A.; Mr. Maclise, R.A.; and Mr. Redgrave, the Art-Superintendent; those to the elementary works by the Art-Superintendent, assisted by Mr. Hudson, the Superintendent of Surface Decoration; and Mr. Robinson, the Curator of the Museum. The Report of the former gentlemen bears testimony to the improvement which has been made in some branches of study—notably those of artistic anatomy, of china painting, of woven fabrics, and of wood-engraving. The Report of the Art-Superintendent and his colleagues, however, contains a complaint upon a ground which it is not altogether uninteresting to observe upon. The course of elementary studies is divided into twenty-two classes, some of them having subdivisions, and specimens of each class and subdivision are required to be sent in by each school, not so much as an evidence of the various pupils' talents, as "to test the qualities of the teaching in them, and to prove that the course of instruction is in full operation in all its various stages, and that no stage is neglected, overlooked, or disregarded by the masters." It appears, however, that many of the schools have failed of sending in the prescribed number of examples of every kind, which elicits a severe rebuke from the reporters. But we very much doubt whether the rebuke is called for; and whether the Department is right in insisting upon the production of examples in every branch of art from every school, however contrary some of them may be to the prevailing tastes, dispositions, and industrial bias of the scholars. What is remarkable is, that we find it stated, a little further down in the same Report, that, "as regards one of these schools—Sheffield it would have stood high in its response to the demands of the Department, but for the continued deficiency in the course of design, but it is but just to remark, as a letter from the Head Master has been received, wherein he explains the difficulty he has had in bringing the painting stages into operation, but intimates that this deficiency (a deficiency remarked on at some length last year) is likely to be remedied without delay." It is elsewhere shown that Sheffield, as well as Birmingham, the Potteries, and the Metropolis school, has been successful in respect of "outlines of figure from the cast;" and of "flowers and fruits modelled from nature;" whilst, on the other hand, Manchester, exhibiting satisfactorily in all other branches, is chargeable with a "deficiency in the modelling stages." Without arguing the question, may it not be very reasonably conceived that, looking to their peculiar industries, Sheffield, Birmingham, and the Potteries may show greater aptitude and predilection for the modelling process, and Manchester to that of painting, and other branches of surface decoration?

And this leads us to some consideration of the arrangement by which the higher functions of the Department, that relating to "Applied Design," are all carried on in a central institution in London. Is it reasonable to suppose that poor would-be artificers in pottery work, iron and brass-work, and textile manufactures of various kinds, should leave the seats where those several industries are carried on, to learn the arcana of their respective arts in London? Would it not be more convenient and more useful to bring the particular school for each home to the spot where it is most needed, and where the instruction given in it would be daily tested and illustrated by experience of actual manufacture? Whatever may be our opinion upon this point in the abstract, the evidence afforded in the Reports of the various professors at Marlborough House is certainly curiously significant. Whilst the 218 elementary schools distributed throughout the country have 35,794 scholars amongst them, being an average of about 170 each, the still more important schools of the Central Department present a very meagre array. During the year 1852, that for Practical Construction, Architecture, and Plastic Decoration, had only 17 pupils; the Textile classes for Surface Decoration had but 22 students; the School of Science applied to Mining and the Arts enlisted 10 students, and 10 training masters; the School of Foreign Painting boasted 8 students, up to Easter, when one resigned; and Mr. Hudson, in reporting upon the school which he superintends, that of the Textile Classes for Surface Decoration, uses a remark which appears to us very pertinent, and one which might be equally applied to the other cases:—

The comparatively limited number of pupils arises, in a measure from the great distance from the seats of manufacture, which forbids persons engaged, or preparing to be engaged, in manufactories making use of the advantages held out to them; besides, their pecuniary circumstances prevent the possibility of a course of study in London.

The difficulty thus hinted at is well worthy of consideration, if we would increase to the utmost the usefulness of the Department.

It remains to be stated that the most recent branch of the Department—that of Science—has been received with marked appreciation by the public, and particularly by the working-classes, who have attended the lectures with avidity, and, in many instances carried away copious notes of the information afforded. Much yet remains to be done, however, before the important truths intended to be developed by the labours of the lecturer can be brought to the manufacturing districts throughout the land; the Report informs us (in not very good English—a peculiarity, by the way, observable in many other passages) that "the recent creation of the Scientific Division of the Department has not enabled it to provide a staff of trained teachers, and in consequence there are many applications from the seats of industry, which cannot for the present be supplied with competent teachers in Science."

LITERATURE.

SILURIA: The History of the Oldest Known Rocks containing Organic Remains; with a Brief Sketch of the Distribution of Gold over the Earth. By Sir RODERICK IMPEY MURCHISON, G.C.St.S., and Member of many Learned and Scientific Societies. Murray.

In this truly rich and splendid work Sir Roderick Murchison has happily condensed and displayed the consummation of the System upon which he has laboured with unceasing zeal for so many years; and, as far as geological research can go, described to us—What our Island was in long bygone ages: How it was changed by natural causes: And What it is now. No mundane inquiry can be more attractive; and the design is notably carried out as its aim is worthily conceived, viz., to mark the most ancient strata in which the proofs of sedimentary or aqueous action are still visible; to note the geological position of those beds which, in various countries, offer the first ascertained signs of life; and to develop the succession of deposits, where not obscured by metamorphism, that belong to such protozoic zones. Thus directing attention to the first stages of the vast series of former accumulations, and the creatures entombed in them, the author has proceeded on visible and practical grounds, and caused Mother Earth to reveal to us, from her deepest and most secret places, the wonders which can engender, the existence, during cycles long the ken of man can appreciate, of successive, and permian, or upper paleozoic strata: and thence into the secondary or mezozoic, or more modern, new red sandstone, trias, and superincumbent lias. Of these a clear and excellent map is prefixed to the volume, and the whole subject is simply and lucidly treated and illustrated. The popular form of treatment is delightful, and we shall endeavour to preserve it in our analysis and remarks. The science of astronomy is sublime, mathematics and physics learned and recondite, elementary learning the statistics and political economy useful, but the youngest of the numbers, in this mood, so far from being dry, combines nearly all the attributes of these congenial sciences, and adds to them a degree of entertainment which is not to be found in any other direction of mind or intellectual pursuit.

Our leader, like Thor, with his mighty hammer, battering and crushing whatever came in his way, or opposed his researches, conquered the lower, and ascended into the upper regions of the Cambrian, from his first achievements on the old western Cambrians, as called by the Romans—the British Caradoc of old—led his valiant Silures against the invaders of their country, he has given the name of Silurian to his system, which has since been extended and confirmed by investigations in Russia, Sweden, Bohemia, France, Spain, Canada, the United States, and other parts; so that the correspondence must be pronounced most comprehensive, if not universal. With regard to the contest between him and Professor Sedgwick—whether the Lower Silurian is a contemporaneous with the Cambrian, or posterior to that formation, we shall be silent—

When Greek joins Greek, then is the tug of war;

and, though they met as giants, the good feeling so prevailed over the disputatious spirit, that it was, in truth, "as if a brother did a brother dare;" and we are not of a disposition to throw oil upon the lambent flame which shines innocuous throughout the book of which we are now speaking, and on which we are about to enter.

Before we proceed to the consideration of the subject matter of this book, we must impress our readers with a sense of its importance. Heat, steam, and electricity noting together with an intensity very powerful in former periods—less influence, perhaps, than it deserves being attributed by geologists to the last-mentioned element—have evoked to account for the phenomena of the earth we inhabit, and the wonderful gradations by which it has arrived at its existent form. Fifty years ago the sequence of fossil remains, as a means of determining eras in the age of our planet, was undreamed of; and even the tracing, classing, and application of these memorials of elder times in regard to the strata we had so long trampled under our feet without a notice, was a novelty to science. To William Smith, the uncle of Professor Phillips, we owe the origination of that species of inquiry which Sir Roderick Murchison has so ably seconded and successfully pursued, and the results of which are now before us in this handsome volume, so copiously illustrated by woodcuts and plates, that its author may well and literally say of it—

Exegi monumentum ære perennius.

We may sum up the argument concisely thus. Sir Roderick holds—

1. That, although there is a great difference in their organic remains, the Upper and Lower Silurian strata consist of a union of the two groups in one system of life; and, having thus explored the lowest known burial-places of former beings, he proceeds—

2. To the consideration of the younger races which successively occupied the higher tiers in the vast necropolis of primæval life. In the first instance, the bottom of the sea was, to a very wide extent, occupied by vast deposits of dark grey-coloured mud, above which came equally vast red deposits, for the most part sandy, caused by the diffusion of iron oxides in the waters; and here other animals, suited to the altered condition of the areas of these ancient seas, took the place of those successfully pursued, and the results of which are now before us in this handsome volume, so copiously illustrated by woodcuts and plates, that its author may well and literally say of it—

Exegi monumentum ære perennius.

We may sum up the argument concisely thus. Sir Roderick holds—

1. That, although there is a great difference in their organic remains, the Upper and Lower Silurian strata consist of a union of the two groups in one system of life; and, having thus explored the lowest known burial-places of former beings, he proceeds—

2. To the consideration of the younger races which successively occupied the higher tiers in the vast necropolis of primæval life. In the first instance, the bottom of the sea was, to a very wide extent, occupied by vast deposits of dark grey-coloured mud, above which came equally vast red deposits, for the most part sandy, caused by the diffusion of iron oxides in the waters; and here other animals, suited to the altered condition of the areas of these ancient seas, took the place of those tenants of the deep which had disappeared in consequence of the superincumbent deposits, and thence the superabundance of plants, reptiles, and sea and land mammalia, which flourished and fed on the territories now occupied by Man. These are the main facts supported by and supporting the Silurian System.

Sir Roderick utterly repudiates the doctrine of a transmutation from lower to higher grades of being: men are not monkeys, who have rubbed off their tails by sitting upon them, nor will they get furnished with wings. There must be another new creation before the earth is *peopled* by angels! We leave minor arguments untouched, though the author's reasoning against contrary speculations are very cogent. A general map of the world, at page 475, affords an instructive view of the regions where the primæval fossil groups are known to exist, and of the crystalline rocks which were formed before or associated with them, and corroborates the Silurian explanation; and fer immense transformations, we are referred to the fractures on the crust of the globe by the violent outbursts of igneous matter from the interior, of which earthquakes and volcanoes within the historical era are comparatively but feeble and insignificant phenomena. Did primordial internal heat operate upon chaos, before the sun and moons were made? are we in a transition state under solar influence? and may not ice, instead of fire, terminate the existence of the human race, and prepare the way for our successors—another example of creative power, and successional progress? Imagination, excited by the retrospect, sinks before the vision of such a future, and the hero who

A painted vest had on,
Which from a naked Pict his sire had won,

(it must have been his bodily cuticle) would be as competent to penetrate the prospect as all the greatest geologists and philosophers who adorn our enlightened times.

The whole structure of the past is based upon the generally-received opinion or hypothesis that our planet assumed the form of a flattened spheroid from rotation on its axis when in a fluid state, and that the interior was molten with fire. The central heat radiating into space and losing its force, allowed the superficial portion to cool and become solid. Through this crust the raging element broke with prodigious force at intervals and thrust the oldest massive granite and other igneous rocks into the places where they became the centres and axes of our mighty mountain chains. As they cooled, when raised into the atmosphere, wasting agencies acting upon them produced the stratified deposits of which we have been speaking, and sea and land often changing position will account for the forms and phenomena which challenge the labours of geological science. By his labours the author has nobly endeavoured to trace a clear general outline of the succession in primæval life, and render the earlier periods of geological investigation intelligible (in a single volume) to ordinary readers. He holds, and great authorities agree with him, that he has demonstrated the truth of the theory, that during the formation of the sediments which compose the crust of the earth, the animal kingdom has been, at least, three times entirely renovated, and that the secondary and tertiary periods have been as completely characterised by a distinct fauna, as the primæval series. This great primæval or Paleozoic series (*palaio* ancient, and *zoe* life), is now ascertained to terminate in Europe, (*pace* the deposits called Permian, a group originally classed with the new red sandstone (trias), of which it was supposed to form the base, but extended investigation has shown, from the nature of its imbedded remains, that it is linked to the carboniferous deposit on which it rests, and is altogether distinct from the trias, which, overlying it, forms the base of all the secondary rocks.

Our endeavour to make a readily-understood digest of this very instructive work, will, we trust, materially afford a general idea of its leading feature, but impress our readers with a sense of its importance. Heat, steam, and electricity noting together with an intensity very powerful in former periods—less influence, perhaps, than it deserves being attributed by geologists to the last-mentioned element—have evoked to account for the phenomena of the earth we inhabit, and the wonderful gradations by which it has arrived at its existent form. Exegi monumentum ære perennius.

It is remarkable that, consistently with the appearance of fishes, a diminutive, yet highly organised, tree vegetation is detected; the antecedent existence of any vegetable production being doubtful, though possible; since such relics, as well as those of vertebrated creatures, may yet be found in lower strata. Analogy, however, is against the supposition; and that this was the first great step in a progressive order of creation, is corroborated by the fact that, in the succeeding, or Devonian period, we are surrounded by a profusion of larger fossil fishes, with vertebræ for the most part very imperfectly ossified, and with dermial skeletons of very singular forms—all differing vastly from anything of their kind in previously-existing strata. These fishes were thus clearly added to the primeval forms of marine life, and with them well defined land plants of much larger dimensions than the very rare specimens of the uppermost Silurian (as at London); and, towards the close of the period we meet with an air-breathing reptile, the little telerpeton. Next follow the true osseous fishes, becoming more and more numerous as we ascend in the deposits; and in like manner the productions of the land, to use a trite expression, bear them company, and an abundant terrestrial flora lays the foundations of the next carboniferous strata. Hence the coal-fields, in which occur the same common species of marine shells, all indicating a more or less equable climate from Polar to Intertropical regions, quite at variance with the present distribution of animal and vegetable life over the surface of our planet.

Sir R. Murchison's next era is designated the Permian, from a large district in Russia, where he pursued the researches which confirmed the system he had framed on Shropshire, and adjacent parts of England and Wales; and here a great number of the primeval types disappear, those that remain are essentially modified, and a thecoudont, a large animal of a higher grade than any belonging to any past era, is found.

But at the close of the Permian, an infinitely greater change took place in life, than that which marked the ascent from the lowest Silurian to the overlying groups. All the species of the earlier races then disappeared, and were replaced by an entirely new creation, the generic types of which were continued through what geologists term the secondary or mezozoic age of sentient beings. Here again one formation followed another, characterised by different creatures, many of them, however, exhibiting, near their downward and upward limits, certain fossils which link one reign of life to another. The medla in which animals have been fossilised, show the intimate connection between the condition of the earth and their existence and preservation. As Sir Roderick does not treat of the secondary and tertiary formations which intervened between those we have cursorily described, and the sediments of the present day, we shall merely observe that every portion harmonises with the theory of successive extinction, new creation, and progression. After the oolitic formations, charged with monstrous saurians, very unlike the lizards which preceded them, and the bones of huge large-winged reptiles (the pterodactyle), we obtain evidence of mammalia, first glimmering in rare and strange specimens, three-toothed and oddly shaped; and some singular exceptions forces us to doubt of certain data; but we at last come to shores deposits, and thence the superabundance of plants, reptiles, and sea and land mammalia, which flourished and fed on the territories now occupied by Man. These are the main facts supported by and supporting the Silurian System.

Sir Roderick utterly repudiates the doctrine of a transmutation from lower to higher grades of being: men are not monkeys, who have rubbed off their tails by sitting upon them, nor will they get furnished with wings. There must be another new creation before the earth is *peopled* by angels! We leave minor arguments untouched, though the author's reasoning against contrary speculations are very cogent. A general map of the world, at page 475, affords an instructive view of the regions where the primæval fossil groups are known to exist, and of the crystalline rocks which were formed before or associated with them, and corroborates the Silurian explanation; and fer immense transformations, we are referred to the fractures on the crust of the globe by the violent outbursts of igneous matter from the interior, of which the earthquakes and volcanoes within the historical era are comparatively but feeble and insignificant phenomena. Did primordial internal heat operate upon chaos, before the sun and moons were made? are we in a transition state under solar influence? and may not ice, instead of fire, terminate the existence of the human race, and prepare the way for our successors—another example of creative power, and successional progress? Imagination, excited by the retrospect, sinks before the vision of such a future, and the hero who

A painted vest had on,
Which from a naked Pict his sire had won,

(it must have been his bodily cuticle) would be as competent to penetrate the prospect as all the greatest geologists and philosophers who adorn our enlightened times.

The whole structure of the past is based upon the generally-received opinion or hypothesis that our planet assumed the form of a flattened spheroid from rotation on its axis when in a fluid state, and that the interior was molten with fire. The central heat radiating into space and losing its force, allowed the superficial portion to cool and become solid. Through this crust the raging element broke with prodigious force at intervals and thrust the oldest massive granite and other igneous rocks into the places where they became the centres and axes of our mighty mountain chains. As they cooled, when raised into the atmosphere, wasting agencies acting upon them produced the stratified deposits of which we have been speaking, and sea and land often changing position will account for the forms and phenomena which challenge the labours of geological science. By his labours the author has nobly endeavoured to trace a clear general outline of the succession in primæval life, and render the earlier periods of geological investigation intelligible (in a single volume) to ordinary readers. He holds, and great authorities agree with him, that he has demonstrated the truth of the theory, that during the formation of the sediments which compose the crust of the earth, the animal kingdom has been, at least, three times entirely renovated, and that the secondary and tertiary periods have been as completely characterised by a distinct fauna, as the primæval series. This great primæval or Paleozoic series (*palaio* ancient, and *zoe* life), is now ascertained to terminate in Europe, (*pace* the deposits called Permian, a group originally classed with the new red sandstone (trias), of which it was supposed to form the base, but extended investigation has shown, from the nature of its imbedded remains, that it is linked to the carboniferous deposit on which it rests, and is altogether distinct from the trias, which, overlying it, forms the base of all the secondary rocks.

Our endeavour to make a readily-understood digest of this very instructive work, will, we trust, materially afford a general idea of its leading feature, but impress our readers with a sense of its importance. Heat, steam, and electricity noting together with an intensity very powerful in former periods—less influence, perhaps, than it deserves being attributed by geologists to the last-mentioned element—have evoked to account for the phenomena of the earth we inhabit, and the wonderful gradations by which it has arrived at its existent form. Fifty years ago the sequence of fossil remains, as a means of determining eras in the age of our planet, was undreamed of; and even the tracing, classing, and application of these memorials of elder times in regard to the strata we had so long trampled under our feet without a notice, was a novelty to science. To William Smith, the uncle of Professor Phillips, we owe the origination of that species of inquiry which Sir Roderick Murchison has so ably seconded and successfully pursued, and the results of which are now before us in this handsome volume, so copiously illustrated by woodcuts and plates, that its author may well and literally say of it—

Exegi monumentum ære perennius.

We may sum up the argument concisely thus. Sir Roderick holds—

1. That, although there is a great difference in their organic remains, the Upper and Lower Silurian strata consist of a union of the two groups in one system of life; and, having thus explored the lowest known burial-places of former beings, he proceeds—

2. To the consideration of the younger races which successively occupied the higher tiers in the vast necropolis of primæval life. In the first instance, the bottom of the sea was, to a very wide extent, occupied by vast deposits of dark grey-coloured mud, above which came equally vast red deposits, for the most part sandy, caused by the diffusion of iron oxides in the waters; and here other animals, suited to the altered condition of the areas of these ancient seas, took the place of those tenants of the deep which had disappeared in consequence of the superincumbent

steps and other traces on the coal, intermixed with aqueous and vegetable types, still further illustrating the then condition of life.*

4. The Permian rocks are supposed to have been the effects of internal convulsions, which projected them through the quietly-deposited contents of the great upper coal-fields, formed by repeated downward movements of low lands beneath the waters. Such ruptures necessarily interrupted the order of ancient sedimentary succession. These upheavings constituted portions of mountain chains; and their fossils—on the whole, different from those of pre-existing palæozoic rocks—are more connected with the carboniferous fauna and flora, than with the organic remains of any secondary or mesozoic rock subsequently formed.

This Permian constitutes the Upper Silurian System; and with it our essay to render it plain to every class of our readers, whether studious or ignorant of geology.

Of Sir Roderick's sketch of the distribution of gold over the earth, we have not room to say much. Gold only exists in quantity to be profitably extracted, in the stratified formations of crystaline and palæozoic rocks, and not in secondary or tertiary deposits. The most original position of the metal is in quartzose vein-stones that traverse altered, palæozoic slates, frequently near their junction with eruptive rocks; or it has been deposited in rivers and lower depressions, from the abraded ancient rocks, as they have undergone a metamorphosis or change of structure by igneous, aqueous, or atmospheric agency. From England, Scotland, or Ireland, Sir Roderick looks for no produce worthy of consideration. He contemns extravagant fears or apprehensions respecting an excessive production of the ore, and maintains that the supply must ever be limited, whilst that of silver may be very greatly enlarged. It would be too long to state the geological data from which these conclusions are deduced, and we shall only repeat the quotation from the Book of Job in support of them: "Surely there is a vein for the silver . . . The earth hath *dust of gold*."

Yet we fancy no geologist can tell us whence the gold comes; where is its bed, and how has it been mixed up in granite and the oldest rocks, and protruded from the bowels of the earth upon the surface? From the diggings of Timon of Athens to the diggings of California and Australia, the history is tolerably clear, but all before is mystery; and in mystery as to what may yet be discovered, we must leave it, in the hope that, whatever betide, a portion of it may speed in our direction. Till that fortunate time, we have again to recognise and applaud the great service rendered to science by Sir Roderick Murchison, in this publication—which may fairly be deemed a sufficient *vade mecum* for the structure of our world, an admirable guide through the vestiges of creation, and an interesting and instructive exposition of the science of geology.

RIDICULOUS THINGS: SCRAPS AND ODDITIES, SOME WITH, AND MANY WITHOUT, ANY MEANING. By JOHN PARRY. T. Maclean.

John Parry, the well-known singer, being prevented by severe illness, from appearing before the public in his capacity of musical "entertainer," has allowed his humour to flow into a new channel—new, at least, to the public, though not to his acquaintance—that of comic sketching. The "Ridiculous Things" before us, consisting of 32 plates of caricures and other sketches, display talent of no mean order, and much originality of conception. The confusion of odd images in some of the plates seem as if they owed their conception to the influence of Hashish, or of the Nightmare; while some of the illustrations are so irresistibly comic, that they might force a laugh from an anchorite or a brother of the Oratory. One page (plate 10) is devoted to the science or art of "*Hairyology*" and consists of representations of the different styles of dressing ladies' hair, as professed by a certain Mons. Papillotini, *Artist in Hair*; "Vagaries in a Verandah; or, the Sprites' Delight on a Moonlight Night" (plate 12), is a higgledy-piggledy of the most grotesque shapes; and "What Happened to Fanny's Favourite Doll, Miss Clementina," is the very perfection of the ridiculous, and is in itself sufficient to place the author in a high rank among caricaturists.

It would require more space than we can spare to detail the various characteristics of this amusing book. Let it suffice to say that for comicality, devoid of every trace of vulgarity, and for genuine humour, there are few publications of the class that excel John Parry's "Ridiculous Things."

THE TWO ANGELS.

A poem just published in America (Putnam), by H. W. Longfellow, the exquisite pathos of which is not lessened by the fact that it was inspired by the birth of a child to the writer, and the death of Mrs. Maria Lowell, the wife of another American poet, on the same day, at Cambridge, U.S. In honour of the American muse, we copy it for our readers.

Two Angels, one of Life and one of Death,
Passed o'er the village as the morning broke;
The dawn was on their faces, and beneath
The sombre houses heared with plumes of smoke.

Their attitude and aspect were the same,
Alike their features and their robes of white;
And one was crowned with amaranthine wreath,
And one with asphodels, like flakes of light.

I saw them pause on their celestial way;
Then said I, with deep fear and doubt oppressed:
"Beat not so loud my heart, lest thou betray
The place where thy beloved are at rest!"

And he who wore the crown of asphodels,
Descending, at my door began to knock;
And my soul sank within me, as in wells
The waters sink before an earthquake's shock.

I recognised the nameless agony
The terror, and the tremor, and the pain—
That oft before had filled and haunted me,
And now returned with threefold strength again.

The door I opened to my heavenly guest,
And listened, for I thought I heard God's voice;
And, knowing whatsoe'er He sent was best,
Dared neither to lament nor to rejoice.

Then, with a smile that filled the house with light—
"My errand is not Death, but Life," he said:
And ere I answered, passing out of sight,
On his celestial embassy he sped.

'Twas at thy door, O Friend, and not at mine,
The angel with the amaranthine wreath,
Pausing, descended; and, with voice divine,
Whispered a word that had a sound like Death.

Then fell upon the house a sudden gloom—
A shadow on those features fair and thin;
And softly, from that hushed and darkened room,
Two angels issued, where but one went in.

All is of God! If He but wave His hand
The mists collect, the rains fall thick and loud,
Till, with a smile of light on sea and land,
Lo! He looks back from the departing cloud.

Angels of Life and Death alike are His;
Without His leave they pass no threshold o'er
Who then would wish or dare, believing this,
Against His messengers to shut the door?

* Was fresh water introduced upon the face of the earth contemporaneously with this great land vegetation, of which nearly 1000 plants can be determined, from impressions and fossilliferous remains? It seems probable; for here begin both fresh-water shells and land shells, reptiles, insects, and breathing creatures, for the sustenance of which rivers and lakes were needful; and, as appears from the mixture with marine deposits in estuaries, Nature had now superadded new elements, as well as new creatures, in renovating the globe.

CHESS.

TO CORRESPONDENTS.

H. O., Queenstown: J. W. B., Dublin; Chicory, Bath.—They shall be examined and reported on shortly.

J. F., Carlisby. Send your name and address to the Secretary of the St. George's Chess-club, 53, St. James's-street.

MORAY. We are too much pressed for space to give an account of the Liverpool Chess meeting this week, but have no doubt you will find it fully reported in the July Number of the *Chess Player's Chronicle*.

DOVER. While, having a Pawn more, ought to win, if either could; but we believe, with the best play, the game must be drawn.

A. F., CARLOW. It is quite true that some Chess MSS. of great value and antiquity have been lately brought to light. An account of them will be found in another part of our present Number.

CONSTANT.—The gentleman named resides in the country; but letters addressed to the St. George's Chess-club, 53, St. James's-street, Piccadilly, will find him.

W. N. There is an excellent Cigar and Chess Divan at the "Wellington" *Saloon*, in St. James's-street, Piccadilly.

SOLUTIONS OF PROBLEM No. 539, by Arnold, Phiz, Derevon, S. H., Norwich, O. N. T., M. A., York, D. P., Miss Fenner, W. J. A., Lyons Road, Liverpool.

SOLUTIONS OF PROBLEM No. 540, by M. M. J. P., Nautilus, M. P., Perseus, T. W. P., F. S. A., Oneida, Omar Pacha, E. H., are correct. All others are wrong.

SOLUTION OF PROBLEM No. 538.

WHITE.	BLACK.	WHITE.	BLACK.
1. R to K B sq	P takes R, becoming a Q, or (a)	2. R to K B 3rd	K takes Kt
		3. R to Q 2nd—Dis. Checkmate.	
(a) 1.	P to K B 6th	2. R to K 4th—Mate.	
	Anything		

SOLUTION OF PROBLEM No. 539.

WHITE.	BLACK.	WHITE.	BLACK.

2. R to Q 3rd	K takes R		

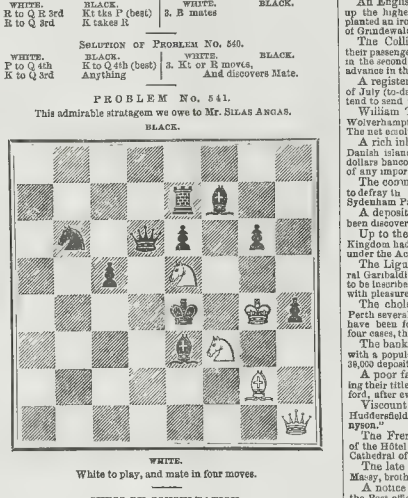
SOLUTION OF PROBLEM No. 540.

WHITE.	BLACK.	WHITE.	BLACK.
1. P to Q 4th	K to Q 4th (best)	2. Kt or R moves,	
2. K to Q 3rd	Anything	And discovers Mate.	

PROBLEM No. 541.

This admirable stratagem we owe to Mr. SILAS ANGAS.

BLACK.



WHITE.

White to play, and mate in four moves.

CHESS BY CONSULTATION.

The following game came off on Friday last, in presence of a numerous assemblage of players, at the Great Chess Gathering in Liverpool: the combatants on one side being Messrs. Staunton, De Riviere (Hon. Sec. of the Paris Cercle des Echecs), and Kylman; and, on the other, Sir John Blunden, Herr Löwenthal, and Mr. Kipping.

WHITE. (Messrs. S., De R., and K.)	BLACK. (Messrs. L., K., and Sir J. B.)	WHITE. (Messrs. S., De R., and K.)	BLACK. (Messrs. L., K., and Sir J. B.)
1. P to K 4th	P to K 4th	21. P to K 4th	Q to K R 6th
2. Kt to K B 3rd	Kt to Q B 3rd	22. P to K 6th (*f*)	K B P takes P (*g*)
3. B to Q B 4th	B to Q B 4th	23. Q takes K Kt P	Castles (on Q side)
4. P to Q Kt 4th	B takes Kt P		(*h*)
5. P to Q B 3rd	B to Q R 4th	24. B to K Kt 5th	Q to K R 6th
6. P to Q 4th	P takes P	25. B takes Q R	R takes B (*k*)
7. Q to Q Kt 3rd	Q to K 2nd	26. Q to Q B 6th (*i*)	R to K Kt sq
8. Castles	B to Q K 3rd	27. B to K B sq	Q to K R 4th
9. B to Q R 3rd	Q to K B 3rd	28. Q R takes Q P (*l*)	Q to Q B 4th (ch)
10. P to K 5th	Q to K Kt 3rd		(*l*)
11. P takes P	Kt takes Q P	29. K to R sq (*m*)	Kt to Q sq
12. Kt takes Kt	B takes Kt	30. K R to Q B 4th	K takes R (*n*)
13. Kt to Q B 3rd	B takes K (*a*)	31. B takes Q	P takes R
14. Q takes B	Kt to K 2nd	32. K to Kt sq	B to Q 4th
15. Q R to Q sq	P to Q Kt 3rd	33. P to Q R 3rd	Kt to Q B 3rd
16. K R to K sq (*b*)	B to Q Kt 2nd (*c*)	34. B to Q Kt 6th	R to Q Kt sq
17. P to K B 3rd	Kt to Q B 3rd (*d*)	35. B to Q R 4th	K to Q 3rd
18. B to Q 3rd (*e*)	Q to K R 3rd	36. P to K B 4th	P to Q B 5th
19. B to Q B sq	Q to K R 5th	37. P to Q R 4th	K to B 4th
20. K R to K 4th	Q to K R 4th	38. Q to K Kt 7th	

And Black struck their colours.

(a) Had they taken the King's Pawn, they would have fallen into White's net, Q to K sq, P to K B 4th &c.

(b) This move was evidently unadvised forsooth of it. Kr Kylman—who, by the way, is a young player of great modesty and great talent—suggested Q to K 2nd, which would, undoubtedly, have been better. Mr. S. perceived the more attacking play of P to K 6th, the probable result of which it may be instructive to seek. Let us then suppose—

16. P to K 6th	B P takes P (best)	16. B takes Kt	K takes B
17. K R takes P	Q P takes R (best)		

(It should be remarked that if White, instead of taking off the Kt here, take the Q B P with the Q—en, Black may Castle, and come out of his difficulties with little, if any, inferiority of situation.)

19. Q takes Q B P (ch)	K to B 2nd	22. Q to Q B sq	
20. Q to Q 6th	P to K 8th (best)	And surely White ought to win without much trouble.	
21. Q R to K B 4th (ch)	K to K Kt 4th		

(c) By this counter attack Black gain invaluable time.

(d) That appeared an agreeable surprise to White, as Mr. S. had previously demonstrated to his allies that the danger of Kt to K to K sq was, that it afforded Black an opportunity of throwing forward their Pawn to Q B 4th, and thus paralysing the action of the White Q's Bishop. There can be no doubt, we believe, that P to Q B 4th would have been a much better line of defence.

(e) It was suggested afterwards, with much show of truth, that White would have done well at this instant to sacrifice the Q's Pawn with Q to Q B 3rd. Had they done so, the following is a likely continuation:—

18. Q R takes Q P	K takes R	19. P to K 6th (ch)	Q takes P
19. B takes K B P	Q takes B	20. Q takes K Kt P (ch)	
	And we don't see how Black can avert defeat.		

(*f*) This will be found, upon analysis, we think, to be preferable to the obvious move of P to K Kt 5th, and, indeed, to any other moves at White's command.

(g) Had they taken now with the Queen's Pawn, White's best course probably would have been to play K B to Q K 5th, which would have gained them a piece at least.

(h) Instead of so playing, they might have taken the K B Pawn, which would probably have led to the following variation:—

25.	Q takes K B P	27. K R to K sq	
26. B to K B 4th	Q takes Q R (ch)	And White must win.	

(i) Threatening to win the adverse Queen by B to K B sq.

(k) This is an excellent coup as unexpected too, as it is clever.

(l) If he had taken the proffered Rook at this moment it would have cost his Queen

(m) It was anything but indifferent whether they moved this, or K to Kt 2nd, as the reader will find on attentively examining the position.

(n) If they had played the natural move of Q to K B 7th, the game would have proceeded thus—

30.	Q to K B 7th	33. Q to K Kt 5th (ch)	K to Q B 3r
31. K R takes Q R P (ch)	B to K 3rd	34. Q Mates	
32. Q R takes Kt (ch)	K takes K R		

CHESS ENIGMAS.

No. 877.—By A. H., of Gloucester.

White: K at his sq. Q at K R 2nd, B at K 4th, Kt at K 6th, P's at K Kt 3rd and 4th and R 3rd.

Black: K at his R 4th, B at Q 8th; P's at K Kt 2nd, K 4th, Q 6th, and Q B 6th.

White to play, and mate in three moves.

No. 878.—By J. B., of Bridport.

White: K at Q 4th, B's at K R 2nd and Q B 4th, Kt at K 7th, P's at K R 4th and Q 3rd.

Black: K at K B 3rd, P's at K R 3rd and Q B 4th.

White to play, and mate in four moves

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The charter granted to the Australian Direct Steam Company in June, 1853, has lap ed, owing to the conditions not having been complied with.

A San Francisco paper states that Madame Pfeiffer, the celebrated German traveller, has arrived in California.

The receipts of specie and bullion last week amounted to nearly £890,000, of which £510,000 was gold from Australia, and the shipments are valued at about £530,000.

The journal *Italia e Popolo*, published at Genoa, was seized on the 18th, on account of an article entitled "Utopia," in which the writer advocated Mazzinian doctrines.

The Queen's Body Guard for Scotland are to meet at Montrose about the middle of this month, to compete for the Silver Arrow.

Five newspaper writers were arrested the other day, at Madrid, and sent off in a post-carriage under a strong escort, for the Balearic Isles, where they are to be placed at the disposal of the civil governor.

M. Kossuth is so unwell as to be unable to leave home, consequently his intended visit to Newcastle is of necessity postponed.

The French Consul at San Francisco is under a bond of 2000 dollars to answer for the offence of having assisted the Filibusters.

In the year ended the 5th January last, the aggregate importation of cheese was 396,403 cwt. 2 qr. 9 lb.

The Duchess of Sutherland, the Marchioness of Ailesbury, the Countess of Jersey, and a large number of peeresses, were present in the Gallery of the House of Lords, on Monday evening, to hear Lord Aberdeen's self-exculpation.

An English tourist, Mr. John Blackwell, climbed, on the 13th, up the highest peak of the Wetterhorn (12,600 feet), from which he planted an iron flag. His guides were Balmat, of Chamouny, and Blauer, of Grindwald, besides four other mountaineers.

The Collins and Cunard steamers have resolved to increase their passenger fares from this time—ten dollars in the first cabin, and five in the second. The additional charge is rendered necessary by the great advance in the price of coal, wages, and provisions.

A register will be opened at the Hôtel de Ville, Paris, on the 1st of July (to-day), for the inscription of the names of the persons who intend to send their productions to the Grand Exhibition in May next.

William Thornely, Esq., nephew of Mr. Thornley, M.P. for Wolverhampton, has been appointed distributor of stamps at Liverpool. The net emolument of the office is about £1600 a year.

A rich inhabitant of Yeiad, a town situated nearly opposite the Danish island of Bornholm, in the Baltic—has promised to give 1000 dollars bance to the poor, on the day that he receives certain intelligence of any important defeat of the Russians.

The committee of St. Paul's School, Liverpool, have voted £10, to defray the expenses of their master coming to London to visit the Sydenham Palace.

A discovery of coal, which appears to be very extensive, has just been discovered on the heights of Hillesborg, near the sea, in Sweden.

Up to the 15th May, 946 licenses to be at large in the United Kingdom had been granted to convicts under sentence of transportation, under the Act of last Session.

The Ligurian Naval Commercial Society, wishing to give General Garibaldi a testimony of their esteem, requested him to allow his name to be inscribed on the list of its honorary members. The General accepted with pleasure.

The cholera has re-appeared in some parts of Scotland. In Perth several cases have already terminated fatally: at Barrhead there have been four fatal cases during the past week; at Darry there were four cases, three of which have terminated fatally.

The banking statistics of Victoria indicate great prosperity; with a population of 300,000 persons, there were, at the close of 1853, 36,000 depositors, whose balances amounted to nearly £9,000,000.

A poor family in Skibbereen have just succeeded in establishing their title to £15,000, the property of Mr. Thomas Bane, of Old Brentford, after a very opposition in the English Chancery Court.

Viscount Goderich, M.P., gave a lecture to the members of the Huddersfield Mechanics' Institution, last week, on the "Poetry of Tennyson."

The French Government has just purchased for the Museum of the Hôtel de Cluny, the famous golden altar which was given to the Cathedral of Basle, by Henry II., Emperor of Germany.

The late Colonel White has left to his nephew, the Hon. John Massy, brother of Lord Massy, £3000 a year in landed estates.

A notice has been posted up in Paris by the Director-General of the Post-office, informing the public that from the 1st of July pre-paid letters for France will only be liable to a charge of 20c., and those not pre-paid to 30c.

A work on the law of storms, by Mr. Piddington, has been translated into Chinese for the benefit of the seafaring Chinamen, at the expense of Sir John Bowring.

A Boston shipbuilder has returned from Europe, with contracts from merchants for the construction of a number of first-class ships, to the value of about 1,000,000 dollars.

Mr. Edward Duffy, M.P., has been obliged to leave Parliament for Malvern, where he says he is "paying the penalty, in an intense dyspepsia, of a brain long overworked, and a body stinted of exercise and fresh air."

A telegraphic communication along the whole line of the Danube is about to be established, and M. Duval, a French engineer, has arrived, to carry the measure into execution.

The Queen of Spain has presented to the Rector of the Church of St. Louis des Français, at Madrid, a Royal mantle of the time of the Saint, and a complete toilette of great richness for the Virgin. A veil, remarkable for its Spanish embroidery, is to be another statue of the Virgin in the same church, in the name of the Infanta.

The following are the distinguished individuals upon whom the honorary degree of D.C.L. is to be conferred at the approaching Oxford Commemoration:—His Highness Prince Louis Lucien Bonaparte; Sir George Grey, K.C.B.; Sir George Bach; John Pass, Esq., Mr. Wormsley, High Sheriff; the Right Hon. Joseph Warner Henley, M.P.; Dr. Grant, Edinburgh; Admiral Moresby; Sir George Young, Garter King-at-Arms.

A farmer in the neighbourhood of Melbourne is now realising no less than £100 per week by the sale of fresh and potted butter in that town. This is better than gold-finding any day.

Two young men and three young women were drowned in the Isis, near Oxford, on Friday week, by the upsetting of a boat.

Mercantile letters from Paris state that the Russian loan is not allowed to be dealt in, and that the Government have forbidden all transactions in Russian stock.

The Federal Council of Switzerland has directed a telegraphic line to be established between Rigi and Lucerne.

The number of chargeable lunatics and idiots in Middlesex last year was 2,866, being an increase, as compared with the preceding year, of 159, and, as compared with the year 1851, an increase of 433.

The *Moniteur* publishes a decree abolishing the duty of 5f. on cotton and wool from the French colonies.

The Electric Telegraph has been opened between Bombay and Calcutta; and official messages have been transmitted from the one Presidency to the other. A room has been prepared in the Secretariate for the use of the public, where the editors, or their reporters, can go every day, and take copies, or consult any papers they like to ask for.

In Holland the crops of corn and potatoes present a very satisfactory appearance; but the fruit-trees have suffered by the cold and high winds which prevailed a month ago.

Sir Edward Bulwer Lytton has followed up his brilliant address of last winter to the Edinburgh students by the intimation of a University prize for the best essay "On the influence exercised by the mind over the body, in the production and removal of morbid and anomalous conditions of the animal economy."

While Prince Charles Lucien Bonaparte was riding in the Bois de Boulogne, on Tuesday, in company with his brother, Prince Pierre Napoleon, and some other gentlemen, a horse ridden by one of his friends suddenly lashed out, and striking the Prince with violence fractured his left leg.

In the 80th Regiment, which has recently arrived from India, after an absence of eighteen years, there are several private soldiers who have saved from £500 to £1000 each.

In Bombay the heat, combined with scarcity of water, has been the occasion of a great deal of mortality amongst both Europeans and Natives. Cholera has been committing fearful ravages all over the country, and fevers are very prevalent.

The telegraph from Edinburgh to Dundee has at length been completed, and messages are now regularly forwarded between the two places by the submarine wires laid across the Forth and Tay.

Mr. Joseph Mitchel, editor of the *Jewish Chronicle*, committed suicide, on Monday evening, during a fit of temporary insanity.

Asiatic cholera has re-appeared in the West Indies, in its worst form. In various parts of Jamaica it is making serious ravages.

Out of 462 members of the Scottish bar, no less than 92 are authors, 6 are, or have been, editors of newspapers, and 20 are contributors to the provincial press.

BARO SOUND.—VIEW IN THE DIRECTION OF HELSINGFORS.

BARO SOUND.

This excellent anchorage was fully described in our own Correspondent's letter last week, with a general view of the Sound, and the fleet at anchor (See page 589). We now engrave an additional sketch, in the direction of Helsingfors, with the *Hecla* going up to examine the passage between the islands.

The following extract from a letter dated Baro Sound, June 13th gives an account of a short surveying excursion in the neighbourhood of Helsingfors:—

About half-past five o'clock on the 12th we got under way, and steamed on towards the "Gibraltar of the North," in two lines—one consisting of *Hogue*, *St Jean d'Acre* and *Austerlitz*, led by the *Duke of Wellington*; the other consisting of *Cressy*, *Princess Royal*, and *Blenheim*, led by *Edinburgh*, the *Bulldog*, *Driver*, and *Esmeralda* in company. The *Impersuse*, *Arrogant*, and *Basilisk* joined us, when we brought up about eight miles from Sveaborg, although it did not appear more than half that distance. The *Dragon*, *Driver*, and *Basilisk* were now sent on to survey the waters close in by the fortress. They went within 800 yards of the shore, in a position where evidently there were no guns to bear upon them, otherwise the ships must have been fired upon. The troops swarmed in great numbers along the shore, looking magnificent in their polished cuirasses and glittering helmets. The steamers did not fire, unprovoked, they could not have done so. The water has been found quite deep.

The view of Sveaborg and Helsingfors from the ships was most picturesque. The day was sunny and warm, and not a ripple disturbed the tranquillity of the water. Helsingfors stood before us resplendent, from the whiteness of its palaces, in the noonday glare. Its principal cathedral, surmounted by a graceful and lofty dome decorated with purple, and crowned by a golden globe, sparkled and flickered with a lustrous and tremulous light. Its classical colonnade stood out in bold relief, while its minaret-looking angular towers reflected bright flashes from their small gilded points.

A three-decker is moored head and stern right across the harbour's mouth, a long, narrow, rocky island, with an irregular spire, forming a natural sea wall, runs along the eastern side of the harbour, over which the tall masts of the ships of the line are showing. To the westward the land is apparently more broken and irregular, and seems to be occupied by some of the forts in the sea front. The town seems to be of vast extent.

H.M.S. "DAUNTLESS," WITH RUSSIAN PRIZES, PASSING THE SWEDISH FLEET.

THE LANDING OF CAPTAIN HALL (OF H.M.S. "HECLA") AT STOCKHOLM.

RECEPTION OF CAPTAIN HALL AT STOCKHOLM.

It will be recollected that, after the gallant affair at Eckness, the *Hecla*, on May 29th, went to Stockholm, where she became an object of great interest to the Swedes, who visited the ship in considerable numbers. Few things could more powerfully show the Swedes' hatred of Russia than the impetuosity with which they rushed on board the *Hecla*, which had been so recently in hot engagement with that Power. Altogether the scene was strangely significant of the Swedish feeling towards Russia, and plainly showed "which way the wind blew." The brave fellows of the *Hecla* were delighted with this unmistakable demonstration; and on the 31st, a sort of return visit was paid to Stockholm and great was the enthusiasm of the Stockholmers upon the landing of the brave Captain Hall and the officers from the *Hecla*. The scene, here engraved, was sketched by Mr. Dolby, who is now with the Baltic fleet.

The Swedish sentry is saluting the two officers, above whose heads, upon the other side of the river, is seen the residence of the British Minister, and immediately adjoining the Russian Minister's residence. The statue is that of Gustavus III. The women on the right are from the province of Dalecarlia, and seem to possess an exclusive right to all the ferries in Stockholm. During his stay, Captain Hall visited the dockyards and arsenal of Stockholm, and was loudly cheered wherever he went; and for some days the gallant Captain continued to be the lion of the city.

MIRAGE IN THE BALTIC.

The phenomenon of Mirage is, doubtless, familiar to most readers of works on popular science. The accompanying instance was recently witnessed in the Baltic, where the English fleet of nineteen sail, cruising off Gothland, was seen one foggy night, early in May, from the quarter-deck of H.M. screw steamer *Archer*, Captain Heathcote, his officers, and ship's company, stationed off the Isle of Osel, Gulf of Riga, distance from the fleet twenty-five or thirty miles. The View is from a Sketch by one of the officers of the *Archer*.

We are reminded of this mirage of a most remarkable instance mentioned by Captain Scoresby, who, in 1822, recognised his father's ship, the *Fame*, by its inverted image in the air, although the ship itself was below the horizon, and thirty miles off

H.M.S. "DAUNTLESS," AND RUSSIAN PRIZES.

We have been favoured by a Correspondent at Copenhagen with the accompanying Sketch.

The *Dauntless*, 23 guns, screw steam-frigate, Captain Alfred P. Ryder, on the morning of the 9th ult., arrived in Hango Bay, and found the *Penelope* there. The *Alban* came in on the same day. She left at ten a.m., and at six p.m., sighted and communicated with Admiral Corry's squadron off Dago Ort, consisting of nine sail of the line, &c., as follows

MIRAGE OF THE ENGLISH FLEET IN THE BALTIC.—SKETCHED FROM "THE ARCHER" STEAM-FRIGATE.

Neptune flagship, *Boscawen*, *Cumberland*, *James Watt*, *Nile*, *Royal George*, *St. George*, *Prince Regent*, *Monarch*, *Euryalus*, and *Rosamond*. At mid-day she passed by the French fleet between Dago Or; and Gotska Sandoe. At nine a.m. the following day she anchored in Faro Sound, where she found nine prizes taken by the *Amphion*. She remained three days coaling and fitting out the nine prizes referred to, all of which were detained under suspicious circumstances, breaking the blockade.

Our Correspondent adds:—"The five prizes that appeared most likely to sail well were then placed under the command of Mr. Herbert, Second Master, and Messrs. Cowburn, Hill, Thompson, and Hancock, Mids of the *Dauntless*. The crews were completed to ten men each, including the Captain, the mate, and the officer in charge. The vessels were started in company on Tuesday, the 14th, at two o'clock. The *Dauntless*, with four large Dutch galliots in tow, started on Wednesday night, after returning from the offing, where she had towed an unseaworthy prize, and set fire to it, after sinking it to the water's edge by shot and shell practice. On the same day she fell in with the Swedish and Norwegian fleet. On the 17th, at one p.m., consisting of eight sail, as follows:—two line-of-battle ships (one bearing the flag of a Rear-Admiral), four frigates, one corvette, and a brig. She exchanged salutes with the fleet, which our Correspondent represents in the accompanying Engraving. On the 16th she communicated with the *Cuckoo* steam gun-boat, Lieutenant-Commander Murray, off the north end of Bornholm. After passing through the Cattegat, it blowing heavy gales from the south-west, she was obliged to cast off the vessels, and send the prize crews on board to convey them to England. She arrived at Copenhagen on the 18th, and found the *Zephyr* steam gun-boat there, which vessel left for the fleet the same day. She sent on shore twenty-three Russian merchant seamen, taken out of the prizes. Twenty-seven others, including masters, mates, and seamen, are coming home in their respective vessels.

The *Dauntless* arrived at Sheerness on Saturday last, bringing home sixteen invalids.

The *Dauntless* has been employed during the last ten weeks in cruising between Hango and Sveaborg, reconnoitring the Russian fleet, which consists of ten sail of the line, one frigate, and two steam-vessels of war. The ten sail of the line are all moored in the harbour in such a position as to be able to concentrate their broadsides on the entrance of the harbour, into which only one ship can pass at a time. Frequently during her cruising within from a mile and a half to two miles of the batteries of Sveaborg, the Russian officers and soldiers could be clearly seen at their guns, while the officers of the *Dauntless* were quietly taking the soundings and sketches of the batteries, ships, dockyard, town, &c. Although she has come home with machinery, boilers, &c., deranged, she is very far from being inefficient as a sailing man-of-war, having a thoroughly well-disciplined and well-officered crew. She brought home large mails from the Baltic fleet.

REMARKABLE DISCOVERY OF VALUABLE MSS. ON CHESS.

A discovery of singular interest not simply to the votaries of Chess, but to all who have a taste for mediæval lore has recently been made in two of the fine old libraries of Florence. Signor Fantacci, Minister dell' Interno, has succeeded in disinterring from the dust in which they have slumbered, uncatalogued and unknown for centuries, some MSS. on Chess, of priceless rarity. Immediately upon the discovery of these treasures, M. Fantacci, with a liberality rare as the MSS. themselves, set about procuring copies of the chief works; and, with the sanction of the Grand Duke, placed the whole, in the most flattering manner, at the disposal of our countryman, Mr. Staunton, as a compliment to that amateur's services in the promotion of the game of Chess.

Some idea of the value and importance of these MSS. both to the Chess-player and the bibliopole, may be formed from the following list of those of which copies have been completed, or are in progress:—

1. A beautiful parchment MS., in Latin, by Bonus Socius (evidently a pseudonym) containing finely executed diagrams, in colours, of Problems, and curious End games, supposed to be one of the earliest European works on practical Chess extant, and to have been written at the latter end of the thirteenth, or beginning of the fourteenth century.

2. A parchment MS., in Latin, of the fifteenth century, containing Problems and critical positions.

3. A Latin MS., on paper, of the fifteenth century, containing Chess Problems.

4. A MS., on paper, in the Italian language, containing beautiful Chess Problems, &c., of the fifteenth century.

5. A MS. on paper, of the sixteenth century, by an anonymous author, entitled "Delle origine, et Invention della Virtuosissima professione [illegible]," [illegible] followed by an original work by some Italian dilettante, in which the Spanish writer Ruy Lopez, composed his treatise.

6. A parchment [illegible] MS. "Compendium edilli novo Scacchi [illegible]" [illegible] per Lucam Cianchi, al [illegible] Cosmo de' Medici [illegible] della Repubblica Fiorentina circa 1460."

7. A rich parchment MS. "Trattato [illegible] Scacchi [illegible] il quale è ritratto di guerre e divazioni di stato, divisato Scaratti, Parise, Gambetti, et di molti moderni, con bellissimi tratti e concetti tutti diversi di Giochino Greco Calabrese."—Not completed.

This appears, beyond all question, to be an original work, presented by Greco to the King, to whom the dedication is addressed. The frontispiece and dedication are in pen and ink, and are profusely ornamented, and the binding is of gold stamped with gold decorations and the arms of the King of Naples upon it. To the practical Chess player, Greco's MS. will probably be of higher interest than any other, since it contains scores of games and several problems, by the famous old Calabrian, which have never yet been published.

The additions thus made to our previous stores in the literature of Chess, may of themselves, or by the stimulus their discovery is likely to give to future research, clear up many a doubtful question touching the ancient form and powers of the Chessmen. Who knows but they may even supply the long-sought link which is to connect in one unbroken chain the *Chaturanga* of ancient India, with its almost fabulous antiquity of 5000 years, and the game of Chess we play to day? Already the discovery has awakened the attention of several gentlemen eminent for their research and learning. Sir Frederic Madden, whose admirable Essays in the "Archæologia," on the Introduction of Chess into Europe, are too well known to need description, has kindly undertaken to enrich our columns with a series of papers, historical and antiquarian, on the subject of Medieval Chess. The subject of these articles will probably comprise a chronological account of all the [illegible] observable with regard to the early form and movements of the piece, illustrated by engravings and descriptions of the celebrated Charlemagne said to have belonged to Charlemagne, the Chessmen found in the Isle of Lewis; those more recently dug up at Warmington, and other Chessmen of the thirteenth and fourteenth centuries. A description of the Latin poems which treat of Chess in the twelfth century; the Anglo-Norman treatise of the thirteenth century; the Moralizatio, addressed to Pope Innocent; the MSS of Nicholas de S. Nicolai, in the Imperial Library at Paris, and the other writers on the subject, of the fourteenth and fifteenth centuries, before the date of printing. To be followed by a description of the printed works of the Middle Ages, and a comparison of the various readings, in comparing them with the known MSS and printed works on the same subject in the principal libraries of Europe, and in preparing for us a detailed account of each, with copious remarks upon the treatises by Ruy Lopez, Gianutio, Salvio, Greco, Gustavus, Selenus, and Carrera.

But the labours of these gentlemen, however well directed and complete in themselves, would still fall short of presenting a perfect view of the progress of Chess without the assistance of some one conversant with the most ancient form of the game in India. This indispensable assistance, we are happy to say, will not be wanting. At the request of Sir Frederic Madden and Mr. Staunton, Dr. Forbes, the well-known Oriental scholar, who, fortunately, combines with his knowledge of Eastern languages, great practical skill in the modern game of Chess, and a more perfect acquaintance, probably, than any one living with its Asiatic predecessor, has favoured us with an appropriate introduction to the forthcoming articles of those gentlemen, in a paper on Oriental Chess. This Essay (the first chapter of which we give in the present number) contains a description of the ancient Hindoo Chessboard and [illegible] ram of the board and men arranged for battle; [illegible] an explanation of the Persian game, with diagrams [illegible] of the three Eastern MSS. in the British Museum, and [illegible] Asiatic Society, to show the *Identity* of the principal moves with those in the ancient MS., quoted by Hyde, now in the [illegible] at Oxford, and, consequently, with those [illegible] Europe [illegible] rod from whence Sir Frederic Madden commenced [illegible] research.

THE FRENCH COURT.—It is believed that the Emperor and Empress will leave Paris on the 20th inst. for the Pyrenees, or perhaps on the visit which has never been [illegible] to the camp at Marseilles. The Empress, whose health is [illegible] appears robust, will pass some time in the [illegible] often visited in other times, and preparations are already making [illegible] which is only distant about half an hour from Bayonne.

THE AGRICULTURAL EXHIBITION OF FRANCE.

(From our own Correspondent.)

WHILE the Government of France has conciliated the good-will of the people of this country by a temperate and straightforward foreign policy, it has done much to secure the respect and obedience of the French themselves, by a course of strenuous exertion to promote industrial and productive pursuits, and a sustained endeavour to concentrate the attention of the nation on objects more in accordance with the spirit of the age than the empty glories of military strife. During the long residence in England of the present ruler of the French, he had ample opportunities of studying the sources and means of our prosperity and greatness; and he has since employed the vast power at his command, in stimulating the French people to follow in our footsteps.

Among the many other efforts to render the "Era of Peace" a reality, and not a phrase, the French Government has, of late, devoted much attention to improving French agriculture. What with us is done by the voluntary efforts of the various branches of the Royal Agricultural Society, in France is necessarily done by the Government, which takes the initiative, and stimulates, by every species of patronage and emulation within its means, the personal exertions of proprietors and cultivators. A very flattering result of their joint exertions was witnessed from Wednesday to Saturday (in the week before last), when was held, for the first time in Paris, a grand Exhibition of Farming Stock, implements, and agricultural productions generally, which attracted crowds of visitors from all parts of France, and which taken as a whole, must be admitted to have been remarkably successful.

It was in the year 1850, that the Minister of Agriculture, acting on the decision of a General Council of Agriculture and Commerce, organised a periodical Exhibition of Agricultural Stock and Implements, more or less formed on the model of those which have rendered such immense service to agriculture in this country. The impulse thus given by the Government, aided by the Inspector-General of Agriculture and the Inspector-General of the Veterinary Schools and Imperial Pastures, was responded to very generally throughout France, by proprietors and cultivators of the soil. Already since 1850 there have been two of these Exhibitions—the first at Versailles, the second at Orleans. A progressive improvement was thus far manifest; and this third and Metropolitan Show has far excelled the others. The Government wisely avoided, from the first, an error which brought down much well-founded censure and ridicule on our own earlier Exhibitions of the same class—"Fat cattle" were expressly excluded; and the competition was confined, as far as animals were concerned, to breeding stock—to male and female horned cattle, sheep, and pigs, born and bred in France, the cattle and sheep to be at least a year old (the males), the females eighteen months, and the swine at least eight months. They are required to have belonged to the exposition more than three months; and any animal brought expressly for the Show from local agricultural societies, is excluded. In other respects, most of our rules are followed. The agricultural implements must be of French manufacture; the prizes are in money, medals, and honourable testimonials; and a special provision authorises the Jury to give medals, if they should think fit, not merely to the owners of the animals, but also to farm superintendents or labourers who may have been directly instrumental in perfecting the stock. Besides animals and implements, specimens of all kinds of agricultural produce are admitted to these shows—such as corn, seeds; tubers; all sorts of textile plants and fruits; wool, silk, butter, cheese, honey, wax, wines, spirits, artificial food for beasts; in short, every article of produce embraced in agriculture and the industry of the farm.

The Champ de Mars, which has so often been the scene of military displays, was chosen as the place of this Exhibition—itself a pledge of the new-born devotion of the French nation to one of the noblest and most useful of the arts of peace. The reader, acquainted with Paris, will understand the position and relative size of this Exhibition, when we state that it occupied in breadth about one-fourth, and in length about one-half of the vast area called the Champ de Mars; that the entire was on the side parallel with the Seine, and nearly facing the Pont de Jena; and that, by consequence, the space occupied extended towards the Ecole Militaire, forming a long narrow parallelogram. The structures for the reception of visitors, and for the distribution of prizes, and the sheds for the animals and other things exhibited, were necessarily of the slightest kind—more so than similar constructions with us. But, on the other hand, that indefinable taste which more or less prevails in such cases in France, was employed to render the more ornamental parts of the whole as elegant and imposing as possible.

The interior proceedings commenced on the 2nd instant, when the various objects intended for exhibition arrived, and were duly placed; then the jury commenced their examination and adjudged the prizes. The President of the Jury for the Animals was the Baron de Béville; the President of the Jury for the Instruments was the Count de Gasparin; and for the general Agricultural Produce, the Count Beaumont. On Wednesday, the 7th, the Exhibition was opened to the public, on the payment of a franc for each person, and on Thursday gratuitously to all comers.

If in size this Exhibition could not compare with the grand periodical gatherings of our Royal Agricultural Society, it certainly merited all praise on the score of quality. The total number of animals of the three species already designated was 689; and it is not too much to say that so large a number, and so remarkable for beauty, have seldom, if ever, been collected together. It must be borne in mind that the Exhibition was of breeding stock; and if here and there might be observed

BRETON BULL. 1ST PRIZE.

animals somewhat too plump for our English notions on this head, still, on the whole, it was remarkable how the qualities necessary for the connoisseur were found united with extreme beauty of form and delicacy of coat. The bovine species was divided into races, of which the prize cattle afforded the most perfect specimens. There were the pure French breeds; the pure foreign breeds, born and reared in France; and the mixed races. There were the Normandy cattle, immense in size, with their great sharp bones, and for the most part brindled, contrasting with the red Flemish, so plump and soft-coated; the cream-coloured Charolaise; the black and white Bretonne, about the size of the Kilkennies; the buff-coloured Garonnaise; the Comtoise; the Limousine, a mountain breed; the Parthenaise, the pure Durhams, and the various crosses of that race. The exhibition of sheep was very fine: the total number was 240 of almost every variety. Amongst the porcine species two attracted especial notice—a boar, of considerable size, and a very fine Berkshire sow. Add to these, 55 lots of cocks, hens, ducks, geese, turkeys, pigeons, and rabbits, and 619 specimens of the various kinds of agricultural produce already mentioned, and we have a very respectable collection, considering that this institution is still in its infancy. Every year will increase the number of exposition, as the facilities of conveyance become multiplied. In regard to the quality of the various things exhibited, more especially the breeding stock, it will not be very easy to advance much further.

Our neighbours manage the honorary portion of these celebrations after their own fashion. With us the dinner is an indispensable wind-up of the proceedings; the French finish with a grand ceremonial, at which the Minister of the Department, and all the officials of a certain rank assist, all decorated and *en grande tenue*. To each nation its customs. The French perform their work none the worse because they are fond of a little display. On Friday, at two o'clock, the distribution of prizes took place, by the hand of the Minister of Agriculture, M. Magne. A magnificent tent of crimson cloth, with gold ornaments, and bearing the Imperial insignia, had been erected for the purpose. M. Magne was assisted by M. Pourrier, Councillor of State and Director-General of Agriculture and Commerce; M. Monny de Mornay, Chief of Division in the Department of Agriculture; M. Lefebvre de St. Marie, Inspector-General of Agriculture and the Commissary-General of the Exposition; the Count de Beaumont; the Count de Gasparin, and the Baron de Béville, and the Presidents of the Juries. A brilliant assemblage of persons of distinction in various departments of the State, and in private society, added, by their presence, to the interest and importance of the ceremony. Before distributing the prizes, the Minister of Agriculture delivered a speech, in which he congratulated the agriculturists and the country at large, on the vast improvement and rapid progress attested by the Exposition. The implements, more particularly those working by steam, were especially mentioned, amidst the loud applause of the spectators, as multiplying human labour—the insufficiency of which, in agricultural France, had been so often regretted. M. Magne also explained the efforts that were being made to spread a knowledge of the principles and practice of drainage; and his final allusions to the personal interest taken by the Emperor, in promotion of industrial pursuits were received with an approval it was impossible to mistake.

The prizes were then distributed. It would not interest our readers to give the complete lists; we may mention, however, the names of two or three of the exhibitors who were most successful. The cultivator who carried off the largest number of prizes was Mr. Allier, the director of the Colony of Petit Bourg, in the Department of Seine-et-Oise. He gained the first prize for the best bull of the Breton race, the first prize for cows of the same race, with an honourable testimonial to another; also, the sixth prize, for pure Durhams male: and the fifth for cows of the same race; among the exhibitors of sheep he gained the first prize for long wool, the first for short wool, the first for rams of mixed breed, and the fourth for ewes of the same race. Among the exhibitors of swine, Mr. Allier carried off the first prize for native sows, the first for foreign hogs, the first for foreign sows, and an extra honourable testimonial for all those which did not receive a prize; he also carried off the fourth prize for the minor farm yard animals, and a gold medal for his exhibition of general agricultural produce. M. Morin, who gained the second prize for a bull of the Normandy race at Orleans, in 1853, was the next most successful exhibitor. The two first prizes for the Charolaise were carried off by M. Louis Massé, of La Guiche; the first prize for bulls of the Normandy race being awarded to M. Lesenne, of Froberville.

At about five o'clock a great sensation was produced by the arrival of the Emperor, accompanied by the Empress. Attended by the chief functionaries already mentioned, and by the general auditors, proprietors, and others, their Majesties proceeded to inspect the whole of the Exhibition, stopping before the most remarkable and beautiful specimens. The gainer of the second prize for bulls of the Breton race was Goëllo, of Morbihan, a cultivator, who, on the arrival of the Emperor, showed him his medal. The Emperor shook him by the hand. Goëllo was dressed in the Breton costume, with the broad hat, long flowing hair, short jacket, and trousers fastened at the knees. When about to leave, the Emperor again saluted the honest peasant, who took his Majesty's hand and pressed it with an expression of gratitude. M. Allier, the gainer of so many prizes, was necessarily an object of interest to their Majesties.

On arriving at the shed where was the beautiful Breton bull with which M. Allier had won the first prize for animals of that race, the Emperor spoke to M. Allier, complimenting him on his signal success as an exposition—a success testified by his having carried off nine gold medals, five in silver or bronze, and three testimonials of the first class. The worthy chief of the colony of Petit Bourg—a better courtier, perhaps, than Goëllo—replied that his success was, in a great measure, due to the Emperor himself, who had been the means of giving to France the tranquillity and security she at present enjoyed. The Empress also spoke to M. Allier, inquiring if the Bretonnaises were good milch-cows? M. Allier was, a little later, again complimented on his Merinos, first prize for sheep. The public and unannounced visit of the Emperor appears to have given great satisfaction, as identifying him directly with the patronage of industrial pursuits.

On Saturday, there was a public sale of the animals, which fetched extremely good prices. Upon the whole, this Exhibition reflected the highest credit on French agriculture. The progress made in so short a time indicates that the energies of the people have not hitherto been fairly developed. It was satisfactory to see in the catalogue the names of so large a portion of the nobility here competing—and not always of so large a portion of the nobility here competing—and not always with success, like our own Richmonds and Dudleys—against small cultivators and proprietors. The attendance, too, on the first day, comprised a vast number of the nobility, of a class generally exclusive, and but rarely seen in public.

NEW MUSIC, &c.

D'ALBERT'S FAIR STAR. The last Waltz of this popular Composer as performed with immense success by Laurent's Band at Mr. Mitchell's last State Ball. Price 4s. CHAPPELL, 50, New Bond-street.

FUTVOYE and CO., 54, Regent-street, corner of Bank-street.

FUTVOYE'S EIGHT-DAY ROUND and OBLONG DRAWING-ROOM CLOCKS, with richly-gilt and Solid Silver Top Bottles.—An immense variety of writing and dressing-cases, capable of every description, new boxes for return cards, and every description of fancy cabinet and leather goods.—54, Regent-street—corner of Bank-street.

FUTVOYE'S PAPIER MACHE FANCIES
[illegible] every variety, [illegible] Work repairer to [illegible]

LEPINE, ancien HORLOGER du ROI à PARIS, having obtained honourable notices for a fine watch presented by a certain house, begs to inform he no ility and gentry, that WATCHES bearing his name are now for sale, at his old established, PLACE des VICTOIRES à PARIS.

PARKINSON and FRODSHAM, Chronometer Makers to the Queen, beg to call the attention of the public to their improved marine CHRONOMETERS, CHRONOMETERS, and CLOCKS, in which much greater accuracy is obtained than has ever heretofore been realized. 4, Change-alley, Cornhill, opposite the Royal Exchange. Established upwards of fifty years.

JONES'S £4 4s. SILVER LEVER WATCHES, and £10 10s. GOLD LEVERS, at the Manufactory, 338, Strand, opposite Somerset House, are warranted not to vary one minute half a minute per week. On every watch a Free office Clock, precisely the same as JOHN JONES, for £4 4s., can will be sent free. Jones's Sketch of Watches forwarded free, for 2d.

AMERICAN CLOCK WAREHOUSE, embracing every variety of these superior Time-pieces, imported direct from our old-established Factory, all brass works, and warranted. To keep correct time. They are sold non-limited time, per-annum to JOHN JONES, for £4 4s., one will be sent free. Jones's Sketch of Watches forwarded free, for 2d.

MORDAN'S GOLD PENS, in great variety of patterns, suitable for presents, may be obtained at most Jewellers and Stationers. As there are many spurious imitations of the Inventor's valuable metallic pens, purchasers should observe that each Pen is stamped "F. Mordan," and numbered; none other is genuine.—Manufactory, 15, Cornwall-road.

HAWLEYS, Watchmakers and Goldsmiths, 120, Oxford-street, and 234, High Holborn (from 75, Strand and Cavendish-street), established upwards of half a century. Elegant GOLD WATCHES, jewelled in four holes, horizontal movement, £3 10s.; Gold Lever and Duplex Watches, highly finished from Twelve Guineas to Thirty-five Guineas; Silver Watches, jewelled in four holes, maintaining power, richly-engraved cases and dials, £2 5s.; Silver Lever Watches, from £3 15s. to Ten Guineas. Fine Gold Chains, commencing at £1 5s. each. Messrs. Hawley respectfully inform the nobility and gentry that they are the only genuine watchmakers of the name in London. Country trade, watches, jewellery, purchased or taken in exchange. Chronometers, clocks, and watches, cleaned, repaired, and warranted twelve months.

SARL'S ARGENTINE SILVER PLATE, 17 and 18, Cornhill This beautiful metal continues to stand quite unrivalled amongst all the substitutes for Silver. Its intrinsic excellence, combined with its elegant and extensive assortment of pattern, it is upwards of thirteen years since this manufacture was introduced by Sarl & and Sons to the public, and notwithstanding the many spurious and unprincipled imitations, the present demand proves all former precedents, thus giving a convincing proof of its having answered the end proposed, which was to produce an article possessing the durability and appearance of solid silver at one-sixth its cost. The magnificent stock at this establishment is replenished with all novelties in dinner, tea, and breakfast services, and never possessed so many attractions as at the present moment. The Spoons and Forks are warranted unions all the various patterns that are made in solid silver. A new and enlarged Pamphlet of Sketches and Prices is just published, and now ready for circulation. It may be obtained gratis by applying at the manufactories.—Sarl and Sons, 17 and 18, Cornhill.—The public are hereby cautioned that no article is genuine, except purchased at Sarl and Sons. No other parties are authorised to sell it.

S. MORDAN and CO.'S MORDAN'S GOLD PENCILS.

CAUTION.—PATENT EVER-POINTED PENCILS.—S. MORDAN and Co. are daily receiving complaints of the various imitations of their truly useful Pencils. They would, therefore, state that no pencils above thirty years. S. M. and Co. caution all purchasers to see that the Patentee's name be stamped on each pencil. A variety of counterfeits are constantly pressed on the public, as they yield a greater profit to the retailer. They are to be had only of S. M. and Co.

CEDAR PENCILS made from the Cumberland Lead, purified by Mr. Brockedon's Patent Process. These Pencils have the distinction in asserting that such excellent pencils in every respect are only to be obtained from the Mines, and from the Proprietors, S. M. and Co., in consequence of the Cumberland Company having disposed of the whole of their stock of crude black lead to a Pencil Manufacturer. S. M. and Co. are enabled to offer their Cedar Pencils, made from the only pure lead extant, with confidence that their superiority will be readily appreciated by the public. The highest encomiums have been pronounced on these Pencils by painters, engravers, architects, engineers, and draughtsmen of the greatest eminence in the several professions, and when these testimonials have been published in detail. The following are a few:—

The Right Hon. R. A.	Copley Fielding, Esq., P.W.C.S.
T. Uwins, Esq., R.A.	W. Wyon, Esq., R.A.
J. K. Brunel, Esq., F.R.S.	David Roberts, Esq. R.A.
C. L. Eastlake, Esq., R.A.	Sir Charles Lemon, Bart., F.R.S.
S. Wentworth Jan., Esq., F.S.A.	Thomas Grahame, Esq., A.R.A.
Sir Charles Barry, R.A.	Warrington Hogan, Esq.
Philip Hardwick, Esq., R.A.	

Each Pencil is stamped "Warranted Pure Cumberland Lead. S. Mordan and Co., London."

S. MORDAN and CO.'S PATENT COMBINATION LITHOGRAPHIC and COPYING-PRESS

By the aid of the most simple mechanical arrangements, the Patentee has succeeded in effectually producing a most efficient and portable Printing and Copying Machine, equally well adapted for the Counting-house, Office, or Library. With the Press are supplied Rollers and Frames independent of his Printer.

The combination has been produced at a less cost than the cheapest Lithographic Press in the market; and, in addition to its capability of doing the work of that machine, it will take off from every sheet of Copying Press, so that it may be said that this latter qualification is obtained by the purchaser gratuitously.

To be obtained from the leading Stationers in the Kingdom.

HER MAJESTY'S ROYAL LETTERS PATENT, for valuable and extraordinary Improvements in the Construction of OPERA, FIELD, and MARINE GLASSES, PROSPECTIVE, RACE-COURSE, and OPERA-GLASSES, to know the distances of objects viewed through them, invented by JAMES PRIESTLEY, Jun., Navy, and others. Messrs. S. and B. SOLOMONS, Opticians, 39, Albemarle-street, Piccadilly; observe—opposite the York Hotel. These Telescopes possess many important advantages over others, 3 inches, with an extra eye-piece, will show distinctly Jupiter's Moons, Saturn's Ring, and the Double Stars; with the same Telescope can be seen a person's countenance 3½ miles distant, and an object seven miles off. They are particularly suitable for any kind for the watch-coat pocket, and are of larger, and all sizes, with increasing powers accordingly. The Royal Exhibition, 1851, valuable, newly-invented, very small, powerful, waistcoat-pocket glass—the size of a watch—by which a person can be seen and known a mile and a half distant. They answer every purpose on the race-course, at the opera house, country reviews, and in every part of the world. They are also most invaluable for shooting, deer stalking, yachting—to sportsmen, gentlemen, gamekeepers, and tourists. Open at any hour, camp, and perspective glasses, in all sizes, from 6s. 6d. upwards; an object can be clearly seen from 10 to 15 miles distant. Newly-invented spectacles, commanded by the Royal Family, and before extremely important to every elderly person, in case clear and distinct, the most aged defective sight is brought to its youthful, natural, and original state

DEAFNESS, NEW DISCOVERY. The ORGANIC VIBRATOR has extraordinarily proved, in a small, newly-invented instrument, for deafness, entirely different from all others, to surpass anything of the kind that has been, or can be, invented. Every person, free of the sons celear as the rain, it is not perceptive, it enables deaf persons to hear distinctly at church and at public assemblies; the captain of steamers, in their ships of war, can hear the slightest command, and it affords all the assistance that possibly could be desired.—Messrs. S. and B. SOLOMONS, Opticians, 39, Albemarle-street, Piccadilly Observe, opposite the York Hotel.

JACK'S ALIVE.—NEW GAME.—Now ready, the original out-door Game JACK'S ALIVE, Registered, 1 and 6 Victoria, cap. 160, entered at Stationers'-hall. The game may be played at any season of the year It affords fine exercise to the body, provokes laughter, induces good spirits, and thereby promotes health. May be played by eight or a lesser number of persons, requires no previous tuition, and can be played anywhere if there be sufficient space. Price of the Game, in strong box complete, with hard wood balls, 5s.; ditto, with wooden balls, 3s. 6d. JAQUES, 102, Hatton-garden; and all the principal Toy Warehouses.
